# Scientific, Technical and Economic Committee for Fisheries (STECF)

## Evaluation of Fishing Effort Regimes in European Waters - Part 1 (STECF-13-13)

Edited by Hans-Joachim Rätz

This report was reviewed by the STECF during its 43<sup>st</sup> plenary meeting  
held from 8-12 July 2013, Copenhagen, Denmark

## TABLE OF CONTENTS

|   |           |
|---|-----------|
| TABLE OF CONTENTS.....  | 3         |
| EVALUATION OF FISHING EFFORT REGIMES IN EUROPEAN WATERS PART 1 (STECF- 13-13) ..... | 10        |
| REQUEST TO THE STECF .....  | 10        |
| INTRODUCTION .....  | 10        |
| STECF COMMENTS, OBSERVATIONS, AND CONCLUSIONS.....                                  | 10        |
| EXPERT WORKING GROUP REPORT.....  | 22        |
| <b>1 EXECUTIVE SUMMARY .....</b>  | <b>23</b> |
| <b>2 RECOMMENDATIONS OF THE WORKING GROUP.....</b>                                  | <b>32</b> |
| <b>3 INTRODUCTION .....</b>   | <b>33</b> |
| 3.1 TERMS OF REFERENCE FOR EWG-13-06 AND EWG 13-13 .....                            | 33        |
| 3.2 PARTICIPANTS.....   | 59        |
| <b>4 DATA USED .....</b>  | <b>59</b> |
| 4.1 REPORT NOTATIONS .....  | 60        |
| 4.1.1 <i>Baltic Sea</i> .....   | 60        |
| 4.1.2 <i>Cod Zones Multi-annual Plan</i> .....                                      | 61        |
| 4.1.3 <i>Southern hake and Nephrops</i> .....                                       | 63        |
| 4.1.4 <i>Western Channel sole</i> .....   | 64        |
| 4.1.5 <i>Celtic Sea</i> .....   | 65        |
| 4.1.6 <i>Bay of Biscay</i> .....  | 65        |
| 4.1.7 <i>Western Waters and Deep Sea</i> .....                                      | 65        |
| 4.2 DATA CALL .....   | 65        |
| 4.3 DATA POLICY, FORMATS AND DATA AVAILABILITY .....                                | 65        |
| 4.3.1 <i>Data availability Table A Catch 2003-2012</i> .....                        | 66        |

**5 EVALUATIONS BY FISHING EFFORT MANAGEMENT REGIME..... 114**

|           |  |     |
|-----------|--|-----|
| 5.1       | BALTIC SEA EFFORT REGIME EVALUATION IN THE CONTEXT OF THE MANAGEMENT PLAN FOR BALTIC COD (COUNCIL REGULATION (EC) NO 1098/2007).....   | 114 |
| 5.1.1     | ToR 1.a Fishing effort in kWdays and GTdays by area, Member State and fisheries.....   | 114 |
| 5.1.2     | ToR 1.b Fishing activity and capacity by area, fisheries and Member State.....   | 124 |
| 5.1.3     | ToR 1.b Catches (landings and discards) of cod in weight and numbers at age by fisheries.....  | 125 |
| 5.1.4     | ToR 1.d Catches (landings and discards) of non-cod species in weight and numbers at age by area, Member State and fisheries.....   | 138 |
| 5.1.5     | ToR 1.e CPUE and LPUE of cod by area, fisheries and Member State.....  | 141 |
| 5.1.6     | ToR 2 Information on small boats (<8m by area).....  | 150 |
| 5.1.6.1   | Fishing effort of small boats by area, Member State and fisheries.....   | 150 |
| 5.1.6.2   | Catches (landings and discards) of small boats by area, Member State and fisheries.....  | 153 |
| 5.1.7     | ToR 3 Fishing effort (days at sea) uptake analysis, by Member State, gear type and fishing area. 155   | 155 |
| 5.1.8     | ToR 4 Evaluation of fully documented fisheries FDF.....  | 160 |
| 5.1.8.1   | Fishing effort of FDF vessels by area, Member State and fisheries in comparison with fisheries not working under FDF provisions.....   | 160 |
| 5.1.8.2   | Catches (landings and discards) of cod and other species taken by FDF fisheries by area, Member State and fisheries in comparison with fisheries not working under FDF provisions.....               | 160 |
| 5.1.8.3   | Comparative analysis of cod selectivity by FDF fisheries and non-FDF fisheries.....  | 160 |
| 5.1.8.3.1 | Cod selectivity by FDF fisheries and non-FDF fisheries of the Western Baltic cod.....  | 161 |
| 5.1.8.3.2 | Cod selectivity by FDF fisheries and non-FDF fisheries of the Eastern Baltic cod.....  | 163 |
| 5.1.9     | ToR 5 Spatio-temporal patterns in effective effort by area and fisheries.....  | 164 |
| 5.1.10    | ToR 6 Remarks on quality of catches and discard estimates.....   | 166 |
| 5.1.11    | ToR 7 Estimation of partial fishing mortalities of cod by area, Member State and fisheries and correlation between partial cod mortality and fishing effort by area, Member State and fisheries..... | 166 |
| 5.1.11.1  | Western Baltic cod in area A.....  | 166 |
| 5.1.11.2  | Eastern Baltic cod in area B.....  | 172 |
| 5.1.12    | ToR 8 Spatio-temporal pattern in standardized catchability indices for cod.....  | 177 |
| 5.2       | KATTEGAT EFFORT REGIME EVALUATION IN THE CONTEXT OF ANNEX IIA TO COUNCIL REGULATION (EC) NO 57/2011) 178   | 178 |
| 5.2.1     | ToR 1.a Fishing effort in kWdays, GTdays, kW and number of vessels by Member State and fisheries 178   | 178 |
| 5.2.1.1   | Uptake of effort baseline.....   | 181 |
| 5.2.2     | ToR 1.b and c Catches (landings and discards) of cod and non-cod species in weight and numbers at age by fisheries.....  | 183 |
| 5.2.3     | ToR 1.d CPUE and LPUE of cod by fisheries and Member States.....   | 194 |
| 5.2.4     | ToR 2 Rank regulated gear groups on the basis of catches expressed both in weight and in number of cod.....  | 199 |
| 5.2.5     | ToR 3 Information on small boats (<10m).....   | 200 |
| 5.2.5.1   | Fishing effort of small boats by Member State.....   | 200 |
| 5.2.5.2   | Catches (landings and discards) of cod and associated species by small boats by Member State ...   | 202 |
| 5.2.6     | ToR 4 Evaluation of fully documented fisheries FDF.....  | 204 |
| 5.2.7     | ToR 5 Spatio-temporal patterns in effective effort by fisheries.....   | 204 |
| 5.2.8     | ToR 6 Remarks on quality of catches and discard estimates.....   | 207 |
| 5.2.9     | ToR 7 Estimation of conversion factors to be applied for effort transfers between regulated gear groups 207  | 207 |
| 5.2.10    | ToR 8 Correlation between partial cod mortality and fishing effort by Member State and fisheries 208   | 208 |
| 5.2.11    | ToR 9 Trends in fishing mortality and fishing effort by Member State and fisheries with regards to the cod plan (R (EC) No 1342/2008) provisions, in particular with regard to Article 13.....       | 208 |
| 5.3       | SKAGERRAK, NORTH SEA AND II EU EASTERN CHANNEL EFFORT REGIME EVALUATION IN THE CONTEXT OF ANNEX IIA TO COUNCIL REGULATION (EC) NO 57/2011).....  | 209 |
| 5.3.1     | ToR 1.a Fishing effort in kWdays, GTdays, kW and number of vessels by Member State and fisheries 209   | 209 |

|         |   |            |
|---------|---|------------|
| 5.3.1.1 | Fishing effort of regulated gears, management area 3b.....  | 209        |
| 5.3.1.2 | Fishing effort of unregulated gears, management area 3b.....  | 226        |
| 5.3.1.3 | Uptake of effort baseline .....   | 228        |
| 5.3.2   | <i>ToR 1.b Catches (landings and discards) of cod in weight and numbers at age by fisheries .....</i>   | <i>231</i> |
| 5.3.3   | <i>ToR 1.c-d Catches (landings and discards) of non-cod species in weight and numbers at age by fisheries 239</i>   |            |
| 5.3.4   | <i>ToR 1.e CPUE and LPUE of cod, plaice, and sole by fisheries and by Member States .....</i>   | <i>253</i> |
| 5.3.5   | <i>ToR 2 Rank regulated gear groups on the basis of catches expressed both in weight and in number of cod, sole and plaice .....</i>  | <i>266</i> |
| 5.3.6   | <i>ToR 3 Information on small boats (&lt;10m) .....</i>   | <i>271</i> |
| 5.3.6.1 | Fishing effort of small boats by Member State .....   | 271        |
| 5.3.6.2 | Catches (landings and discards) of cod and associated species by small boats by Member State ...  | 273        |
| 5.3.7   | <i>ToR 4 Evaluation of fully documented fisheries FDF .....</i>   | <i>276</i> |
| 5.3.7.1 | Fishing effort of FDF by Member State and fisheries in comparison with fisheries not working under FDF provisions .....   | 276        |
| 5.3.7.2 | Catches (landings and discards) of cod and other species taken by FDF fisheries by Member State and fisheries in comparison with fisheries not working under FDF provisions .....   | 279        |
| 5.3.7.3 | Comparative analysis of cod selectivity by FDF fisheries and non-FDF fisheries .....  | 282        |
| 5.3.8   | <i>ToR 5 Spatio-temporal patterns in effective effort by fisheries .....</i>  | <i>282</i> |
| 5.3.9   | <i>ToR 6 Remarks on quality of catches and discard estimates .....</i>  | <i>283</i> |
| 5.3.10  | <i>ToR 7 Estimation of conversion factors to be applied for effort transfers between regulated gear groups .....</i>  | <i>283</i> |
| 5.3.11  | <i>ToR 8 Estimation of partial fishing mortalities of cod, haddock, saithe, whiting, plaice and sole by area, Member State and fisheries and correlation between partial cod mortality and fishing effort by area, Member State and fisheries .....</i> | <i>285</i> |
| 5.3.12  | <i>ToR 9 Trends in fishing mortality and fishing effort by Member State and fisheries with regards to the cod plan (R (EC) No 1342/2008) provisions, in particular with regard to Article 13.....</i>   | <i>311</i> |
| 5.3.13  | <i>ToR 10 Considerations in order to accomplish spatio-temporal patterns in standardized catchability indices for cod.....</i>  | <i>312</i> |
| 5.4     | WEST OF SCOTLAND EFFORT REGIME EVALUATION IN THE CONTEXT OF ANNEX IIA TO COUNCIL REGULATION (EC) NO 57/2011) .....  | 313        |
| 5.4.1   | <i>ToR 1.a Fishing effort in kWdays, GTdays, kW and number of vessels by Member State and fisheries 313</i>   |            |
| 5.4.2   | <i>ToR 1.b and c Catches (landings and discards) of cod and non-cod species in weight and numbers at age by fisheries .....</i>   | <i>326</i> |
| 5.4.3   | <i>ToR 1.d CPUE and LPUE of cod by fisheries and by Member States.....</i>  | <i>343</i> |
| 5.4.4   | <i>ToR 2 Rank regulated gear groups on the basis of catches expressed both in weight and in number of cod .....</i>   | <i>346</i> |
| 5.4.5   | <i>ToR 3 Information on small boats (&lt;10m) .....</i>   | <i>347</i> |
| 5.4.5.1 | Fishing effort of small boats by Member State .....   | 347        |
| 5.4.5.2 | Catches (landings and discards) of cod and associated species by small boats by Member State ...  | 348        |
| 5.4.6   | <i>ToR 4 Spatio-temporal patterns in effective effort by fisheries .....</i>  | <i>349</i> |
| 5.4.7   | <i>ToR 5 Remarks on quality of catches and discard estimates .....</i>  | <i>358</i> |
| 5.4.8   | <i>ToR 6 Estimation of conversion factors to be applied for effort transfers between regulated gear groups 358</i>  |            |
| 5.4.9   | <i>ToR 7 Correlation between partial cod mortality and fishing effort by Member State and fisheries 358</i>   |            |
| 5.4.10  | <i>ToR 8 Comparative analyses between trends in fishing mortality and fishing effort by Member State and fisheries and the cod plan (R (EC) No 1342/2008) provisions, in particular with regard to Article 13 365</i>                                   |            |
| 5.4.11  | <i>ToR 9 Considerations in order to accomplish spatio-temporal pattern in standardized catchability indices for cod.....</i>  | <i>366</i> |

**SCIENTIFIC, TECHNICAL AND ECONOMIC COMMITTEE FOR FISHERIES  
(STECF)**

**EVALUATION OF FISHING EFFORT REGIMES IN EUROPEAN WATERS PART 1 (STECF- 13-13)**

**THIS REPORT WAS REVIEWED DURING THE PLENARY MEETING HELD IN  
COPENHAGEN, DENMARK 8-12 July 2013**

**Request to the STECF**

STECF is requested to review the report of the **EWG-13-06** held from June 17–21, 2013 in Brussels, Belgium, evaluate the findings and make any appropriate comments and recommendations.

**Introduction**

The report of the Expert Working Group on Evaluation of fishing effort regimes in European Waters Part 1 (EWG -13-06) was reviewed by the STECF during its 43<sup>th</sup> plenary meeting held from 8-12 July 2013, Copenhagen, Denmark.

The following observations, conclusions and recommendations represent the outcomes of the STECF review.

**STECF COMMENTS, OBSERVATIONS, AND CONCLUSIONS**

STECF notes that the Terms of Reference relating to fishing effort regimes in the following sea areas have largely been successfully addressed by the Report of the EWG 13-06:

1. Eastern and Western Baltic,
2. the Kattegat,
3. the Skagerrak, North Sea, European waters in ICES Div.2 and the Eastern Channel,
4. to the West of Scotland,
5. Irish Sea,
6. Celtic Sea,
7. Atlantic waters off the Iberian Peninsula,
8. Western Channel,
9. Western Waters and Deep Sea
10. and the Bay of Biscay,

The EWG 13-06 Report provides updated estimates of trends in fishing effort, landings and discards by species, CPUE and LPUE by fisheries and species, and partial fishing mortalities for effort regulated and non-regulated fisheries by Member States.

Nevertheless, due to time constraints and/or data deficiencies the following elements of the Terms of Reference were not completely addressed but will be dealt with during the forthcoming STECF EWG 13-13 fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy):

- comparative analyses regarding cod and sole selectivity of fully documented fisheries (FDF) and fisheries not participating in FDF schemes,
- detailed evaluations of the national implementation as regards fishing effort derogations granted under the provisions of article 13 of the new cod plan (Counc. Reg. No 1342/2008), and
- spatio-temporal patterns in cod catchability.

### *2013 DCF Fishing Effort Data Call*

The EWG 13-06 Report is based on data submitted by Member States in response to the 2013 DCF fishing effort data call in 2013. STECF notes a general improvement in Member States' submissions with regard to data completeness and quality as well as improved compliance with deadlines. However, the work of the EWG 13-06 once again was compromised by delays in some Member States' submissions, incomplete and erroneous data submissions and re-submissions.

STECF notes that its 2012 recommendations to amend the 2013 DCF data call to support fishing effort regime evaluation were implemented and that these changes have supported and will continue to support the accomplishment of specific ToR. STECF notes that the DCF data call in 2013 imposed an additional workload on Member States because of the need to re-aggregate and resubmit data for earlier years than 2012 in addition to the data requested for 2012. The outcome of the call was that Denmark, Portugal and UK (without Scotland) have revised their complete time series of fisheries-specific catch and effort data. Catch (landings and discards) and effort Data from Spain were provided for 2012 and discard data were provided for earlier years thereby enabling an improved evaluation of the effort regime for Southern hake and *Nephrops*.

ICES (WGMIXFISH 2013) has undertaken a detailed comparison of the 2011 fisheries data received by ICES in 2013 and the 2011 data submitted to STECF under the 2012 DCF effort data call. STECF notes that while the fisheries-specific data on landings and nominal effort were found to be highly consistent in both data sets, the ICES estimates of discards were consistently higher than the estimates of discards provided in the STECF data base. The pronounced differences (of the order of 50% difference) in discard estimates are mainly due to different raising procedures applied. STECF notes that both ICES and STECF experts are fully aware of such discrepancies and the issue will be addressed during the latter part of 2013 to try to develop the most appropriate methodology to derive consistent estimates.

STECF has proposed an Index of Discard Coverage (DQI) to facilitate the use of the discard estimates provided in the STECF data bases on fisheries-specific catch and fishing effort. The DQI is expressed by stock, fishery and Member State as the proportion of national landings covered by discard estimates in relation to the total national landings;

$$DQI = \Sigma L_d / \Sigma L$$

where L denotes landings (t) and L<sub>d</sub> landings with a discard estimate.

While the DQI is a useful indicator of the proportion of landings by fishery by Member State and stock that are sampled for discards, it does not reflect the level of discarding each fishery carries out. Furthermore, the DQI does not distinguish between a fishery with a high discard rate and a fishery with a low discard rate, or the level of sampling allocated to each fishery. It's an exploratory tool that allows the identification of the proportion of overall landings by fishery that was sampled.

In order to aid interpretation of the DQI, the DQI is further classified in three separate groups as follows:

- A = 67 % or more of the landings have an accompanying discard estimate,
- B = 34-66 % of the landings have an accompanying discard estimate, and
- C = less the 33 % of the landings have an accompanying discard estimate.

STECF considers category A estimates to be sufficiently reliable to be used for assessment purposes, as the majority of the landings by species and fishery are accompanied with a discard estimate. However it should be noted once again that this DQI cannot inform on the quality of the discard rate estimates supplied by nations (as affected for example by the proportion of fishing trips sampled for discards).

Category B discard estimates are considered to be less reliable than category A and require careful scrutiny before they are used for assessment purposes.

Category C discard estimates are the least reliable and STECF considers that they should not be used for assessment purposes.

STECF notes that all fisheries-specific parameters for the various fishing effort regimes can be downloaded at the corresponding aggregation level as digital Appendixes to the present report from the EWG 13-06 web page: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>.

### **Effort regime evaluation for the Baltic**

Deployed effort of regulated gears remained rather constant in both cod plan areas A (subdivisions 22-24) and B(subdivisions 25-28) (slight increase in regulated otter trawls).

The effort-regulated otter trawls are the major cod gears, contributing 67 and 82% to the catch in areas A and B in 2012, respectively. The second among the ranked cod gears are gill nets. Cod discards are generally low but slightly higher for area B, showing an increasing trend in most recent years for regulated otter trawls.

With a lack of information from Estonia, small boats <8m LOA were found to constitute 7 and 12% to the overall effort deployed in the Baltic in 2011 and 2012, respectively. Small boats are primarily operating in the northern cod plan area C(subdivisions 29-32).

STECF undertook a provisional quantitative analysis regarding the estimation of effort deployed in units of days at sea by Member State, and compared the national uptake with the calculated maximum effort available. STECF notes that its approach to estimate the maximum days at sea available per year and Member State from the product of its number of active vessels using one of the regulated gears times the days at sea per vessel can only serve as an approximation of the effort ceiling. The provisional uptake analysis revealed that the

average annual uptake of available days at sea over the time period 2008-2012 remained in the range of 36-38% in area A, 34-47% in the area B and 53-83% for the areas A and B combined.

According to the information submitted by member States, only Denmark has operated under the fully documented fisheries (FDF) scheme in the Baltic in 2012. The reported Danish catch of cod caught in fully documented fisheries with regulated gears amounted to 333 t in area A and 406 t in area B, representing 3% of the overall catch. A preliminary analyses of cod selectivity revealed that non-FDF fisheries were catching younger fish. However, the effects of different age reading methods applied in different national institutes remain unclear. Such preliminary results require further investigation.

Close correlations between fishing mortality and fishing effort measured in kW days at sea as well as between partial fishing mortalities and the specific fishing effort by fisheries were found. While good correlation does not always mean 'cause and effect', the results here suggest that management of fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures.

### **Effort regime evaluation for the Kattegat**

Fisheries in the Kattegat are almost exclusively conducted by Denmark and Sweden (88% and 11% of the total regulated effort in 2012, respectively) using predominantly trawls and primarily the gear class TR2. The TR2 gear constitutes 90% of the total regulated effort. Beam trawls are forbidden.

There are three effort derogations in place in Kattegat for TR2, CPart13B, CPart13C and CPart11. All the Danish TR2 effort is under the derogation CPart13C from 2010 onwards while the German TR2 effort is partly under the derogation CPart13B between 2010 and 2011. STECF notes that the uptake of the regulated gear TR2 exceeds the maximum effort levels defined in the annual TAC and quota regulations since 2010 as Member States applied additional effort allocations under article 13 of the cod plan.

Only Sweden reported under the derogation article 11 in gear category TR2, achieving the <1.5% cod catch by using a sorting grid. This represented 68% of the Swedish TR2 effort in Kattegat 2012. The effort deployed by passive gears (GN1, GT and LL1) is relatively small, with a stable share of around 3% of the total regulated effort in 2012. The effort deployed by unregulated gear categories (including effort under the derogation CPart11) was 30% of the total effort in 2012.

In 2012, the nominal effort (kW days at sea) deployed by small vessels (LOA<10m) constituted 12% of the total effort in the area.

According the ranked regulated gear groups' contributions to cod catch and landings in 2012, only the TR2 is estimated to exceed the level of the cumulative 20% and thus considered subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)).

STECF notes that information on fully documented fisheries FDF was only provided by Sweden and only for 2010. FDF fishing effort and catches appear negligible and are not evaluated further.

The estimated cod CPUE and respective effort transfer factors between donor and receiving regulated gear groups based on averages 2010-2012 are given below. Red cells are indicated to be imprecise due to lack of adequate discard information. Yellow cells indicate sufficient sampling and green cells good sampling information. The conversion factors are estimated based on CPUE while LPUE values are also provided.

| Kattegat |            |                |     |     |       |       |       |           |      |                            |                           |  |
|----------|------------|----------------|-----|-----|-------|-------|-------|-----------|------|----------------------------|---------------------------|--|
|          | donor gear | receiving gear |     |     |       |       |       | 2010-2012 |      | factor =                   | CPUE donor/CPUE receiving |  |
|          |            | GN1            | GT1 | LL1 | TR1   | TR2   | TR3   | CPUE      | LPUE |                            |                           |  |
| 3a       | GN1        |                | 1   | 1   | 1     | 1     | 1     | 183       | 50   | if factor > 1 then         |                           |  |

| 3a       | TR2        | 0.579          | 1   | 1   | 1     |       | 1     | 106       | 41   | CPUE=1 or LPUE=1           |                           |  |
| 3a       | TR3        | 0.044          | 1   | 1   | 0.113 | 0.075 |       | 8         | 8    |                            |                           |  |

STECF notes that that ICES did not provide an analytical assessment of cod in the Kattegat in 2013. STECF EWG 13-06 is therefore unable to provide analyses dealing with the partial fishing mortalities by fisheries (metiers), the respective correlations between partial fishing mortality and fishing effort and the review of reductions in fishing mortality of the effort regulated gear groups in relation to the cod plan provisions.

### Effort regime evaluation for the Skagerrak, North Sea including 2EU and Eastern Channel

STECF notes that in this area, a substantial part of the effort is deployed by Non-European fleets (primarily Norway); this component is not accounted for in this report, except for the part dealing with partial fishing mortalities by fisheries. Norwegian fishing effort is reported to ICES (ICES, 2013). Catch and effort data including the special conditions of the cod management plan in force since 2009 (CPart11 and CPart13) have been provided by all Member States with significant fishing activity in this area. Additionally, distinction is now provided across the various CPart13 specifications (A, B, or C).

The North Sea (area 3b2) is the main fishing area (77% of the total 2012 regulated effort in area 3b), followed by the Eastern Channel (17%, 3b3), while the Skagerrak represents a smaller component (6%, 3b1). In all three sub areas, regulated effort has decreased since 2003. In area 3b2 (North Sea), regulated effort is equally shared between beam trawls and demersal trawls/seines (48% and 46% of total 2012 regulated effort respectively). Small mesh beam trawling (80-119 mm, BT2) and demersal trawls/seines with larger mesh sizes (>=100mm, TR1) are the predominant fisheries. In the Eastern Channel, demersal trawls/seines are also the main gears (65% of the 2012 regulated effort in the area, mainly smaller mesh size 70-99mm TR2), but with beam trawls and passive gears representing important fisheries (19% and 16% of the 2012 regulated effort respectively). The main gears in management area 3b1 (Skagerrak) are demersal trawls/seines (88% of the 2012 regulated effort) with a predominance of TR2.

The estimated overall reduction in effort (kW days at sea) in 2012 of regulated gears in the entire area 3b amounts to 45% compared to the average 2004-2006 and to 12% compared to 2011.

Since 2003 the effort of small boats (LOA<10m) gradually increased from 3% to 9% of the overall effort deployed in the entire area 3b (Skagerrak, North Sea and 2EU, Eastern Channel) in 2012.

TR1 and TR2 gears were identified as the major cod catching gears and exceeded the 20% cumulative cod catch in 2012 and are thus considered subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)).

In 2012 fully documented fisheries again represented only a small but increasing proportion of the total effort (5.6%). The importance of the main cod gear (TR1) has increased further and is estimated at 28.9% of the TR1 effort deployed in 2012. In total, 36% of cod catches by EU vessels were taken during FDF trials.

A preliminary analyses of selectivity for cod by FDF and non-FDF fisheries, indicated that cod catch compositions at age from FDF fisheries were rather similar to the catch compositions at age from non-FDF fisheries. This effect may be due to the fact that Member States may not have undertaken separate sampling to provide separate national catch composition estimates for FDF and non-FDF fisheries. Further investigations need to be undertaken to confirm or refute these observations.

The estimated cod CPUE (average 2010-2012) and respective effort transfer factors between donor and receiving regulated gear groups for the cod management area comprising the Skagerrak, North Sea, EU part of Iia, and Eastern Channel are given below. Red cells indicate imprecise values due to lack of adequate discard information. Yellow cells indicate sufficient sampling and green cells good sampling information. STECF notes that the EWG 13-06 report also provides the conversion factors for each of the three sub-areas mentioned above.

| Skagerrak, North Sea and 2 EU, Eastern Channel |     | donor gear \ receiving gear |       |       |       |       |       |       |     | 2010-2012 |      | factor = CPUE donor/CPUE receiving<br>if factor > 1 then<br>factor = 1<br><br>if CPUE=0 or LPUE = 0 then<br>CPUE=1 or LPUE=1 |
|--|-----|-----------------------------|-------|-------|-------|-------|-------|-------|-----|-----------|------|--|
|  |     | BT1                         | BT2   | GN1   | GT1   | LL1   | TR1   | TR2   | TR3 | CPUE      | LPUE |  |
| 3b   | BT1 |                             | 1     | 0.271 | 1     | 0.513 | 0.255 | 1     | 1   | 267       | 267  |  |
| 3b   | BT2 | 0.176                       |       | 0.048 | 0.245 | 0.09  | 0.045 | 0.198 | 1   | 47        | 42   |  |
| 3b   | GN1 | 1                           | 1     |       |       | 1     | 0.94  | 1     | 1   | 985       | 962  |  |
| 3b   | GT1 | 0.719                       | 1     | 0.195 | 1     | 0.369 | 0.183 | 0.81  | 1   | 192       | 140  |  |
| 3b   | LL1 | 1                           | 1     | 0.528 | 1     |       | 0.496 | 1     | 1   | 520       | 519  |  |
| 3b   | TR1 | 1                           | 1     | 1     | 1     | 1     |       | 1     | 1   | 1048      | 903  |  |
| 3b   | TR2 | 0.888                       | 1     | 0.241 | 1     | 0.456 | 0.226 |       | 1   | 237       | 126  |  |
| 3b   | TR3 | 0.037                       | 0.213 | 0.01  | 0.052 | 0.019 | 0.01  | 0.042 |     | 10        | 10   |  |

The Report presents partial fishing mortalities by regulated fisheries and Member States in relation to the estimated fishing mortality by ICES (2013) and the landings and discards volumes in relation to the estimated total catch for the year available. STECF notes that the correlations between the partial Fs for cod and effort are significant for some important regulated metiers catching cod but insignificant for others. In all three sub-areas 3b1, 3b2 and 3b3, the correlations between the summed partial Fs of cod for regulated gears and respective sums of fishing effort in units of kW days at sea are statistically significant. While good correlation does not always mean 'cause and effect', the results here suggest that management of fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures.

Mortality due to discarding has generally been high, but has declined since 2008.

STECF notes that there are indications of reductions in partial Fs from catches of the Scottish TR1 and TR2 fisheries operating under the provisions of article 13.2.c of the cod plan, mainly caused by reductions in their partial F through reduced discard rates. The German and French fisheries operating under the provision of article 13.2.b are either negligible or have reduced their contribution to cod fishing mortalities substantially. STECF notes that more detailed analyses of the national partial F reductions as stipulated in article 13 of the cod plan as requested in ToR 9 will be conducted during the forthcoming STECF EWG 13-13 (7-11 October 2013).

### Effort regime evaluation for the West of Scotland

The fishery West of Scotland is primarily an otter trawl fishery; beam trawls and static gears are hardly used. Effort within regulated gears is 56% less in 2012 compared to 2003. Regulated effort by trawl and seine gears (TR gears under Coun. Reg. (EC) 1342/2008) shows a long term decrease in effort and fell to its lowest level in the time series in 2011, but was stable between 2011 and 2012 for those nations reporting in both years. Overall effort of small boats (LOA<10m) is 10% higher in 2012 compared to 2003 although it has been relatively stable since 2006.

The most important category in terms of cod catch and landings is TR1 which over the period 2010-2012 on average, accounted for 94% and 99% of the total cod landings and catches by weight respectively from VIa. The second most important gear category is TR2, which can be seen to be a gear category with Nephrops as the dominant species in the landings. Based on the relative contribution TR1 is the only gear group where the percentage cumulative cod catch in 2012 exceeded 20% and thus considered subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)).

The table of international conversion factors is based on average CPUE (2010-2012). Discard data are scarce for many regulated gear groups but have been interpreted as representative for TR1 and TR2.

| West of Scotland |     | receiving gear |     |       |     |       |       | 2010-2012 |      | factor =                   |
|------------------|-----|----------------|-----|-------|-----|-------|-------|-----------|------|----------------------------|
| donor gear       |     | BT1            | BT2 | GN1   | LL1 | TR1   | TR2   | CPUE      | LPUE |                            |
| 3d               | BT1 |                | 1   | 0.143 | 1   | 0.004 | 0.333 | 1         | 1    | if factor > 1 then         |
| 3d               | BT2 | 1              |     | 0.143 | 1   | 0.004 | 0.333 | 1         | 1    | factor = 1                 |
| 3d               | GN1 | 1              | 1   |       | 1   | 0.028 | 1     | 7         | 7    |                            |
| 3d               | LL1 | 1              | 1   | 0.143 |     | 0.004 | 0.333 | 1         | 1    | if CPUE=0 or LPUE = 0 then |
| 3d               | TR1 | 1              | 1   | 1     | 1   |       | 1     | 252       | 33   | CPUE=1 or LPUE=1           |
| 3d               | TR2 | 1              | 1   | 0.429 | 1   | 0.012 |       | 3         | 2    |                            |

Overall the correlation between partial F of cod and estimated fishing effort of regulated gears is statistically significant but negative. STECF is unable to determine the reason why there are negative or insignificant relationship between F and effort for the greatest cod contributors to cod catches from VIa. Nevertheless from the information reported by Member States, the management measures in place in VIa have not been successful in achieving a reduction in fishing mortality.

STECF further noted that the metier contributing most to partial F of cod is the Scottish TR1 gear operating under special condition CPart13D (fishing west of the management line

delimiting the cod recovery zone). Furthermore, there are no indications that the Scottish TR1 fishery working under any of articles 13.2.B, C or D have contributed to a reduction in fishing mortality of cod west of Scotland. STECF notes that detailed analyses of the national partial F reductions as stipulated in article 13 of the cod plan as requested in ToR 9 will be conducted during the forthcoming STECF EWG 13-13 (7-11 October 2013).

### Effort regime evaluation for the Irish Sea

During 2003-2010, overall nominal effort (kW\*days at sea) for boats LOA $\geq$ 10m declined continuously by 43%. Since then, effort has remained stable. The trend in fishing effort of regulated gears appears similar with a decrease by 54% during 2003-2010 and remained stable from 2010 to 2012. Since 2007, the dominating regulated gear in terms of kW days has been the trawled TR2 (>70%) with an increasing trend (79% in 2012). Since 2009, the cod plan provisions of article 13.2 a, b and c are applied when using effort-regulated gears.

During 2006-2012, small boats' effort (LOA<10m) varied without a clear trend and constituted among 12-15% of the overall effort deployed.

STECF notes that discard information available within the Irish Sea is incomplete and thus impedes analyses of catch compositions and trends by fisheries. Based on the relative contributions to overall deployed effort, GN1, TR1 and TR2 are gear groups where the proportional cumulative cod landings in 2012 exceeded 20% and are thus subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)).

The table of international effort conversion factors is based on average CPUE (2010-2012) is given below. LPUEs are used for GN1, GT1, and LL1 fisheries as time series of discard data were not available. TR2 and BT2 are the only two gear categories where discard data were available over the three previous years.

|        | BT2   | GN1   | GT1   | LL1 | TR1   | TR2   | CPUE | LPUE | factor =                   |
|--------|-------|-------|-------|-----|-------|-------|------|------|----------------------------|
| 3c BT2 |       | 0.03  | 0.081 | 1   | 0.172 | 1     | 92   | 59   | if factor > 1 then         |
| 3c GN1 | 1     |       | 1     | 1   | 1     | 1     | 3033 | 3033 | factor = 1                 |
| 3c GT1 | 1     | 0.375 |       | 1   | 1     | 1     | 1136 | 1136 |                            |
| 3c LL1 | 0.011 | 0     | 0.001 |     | 0.002 | 0.013 | 1    | 1    | if CPUE=0 or LPUE = 0 then |
| 3c TR1 | 1     | 0.176 | 0.471 | 1   |       | 1     | 535  | 523  | CPUE=1 or LPUE=1           |
| 3c TR2 | 0.859 | 0.026 | 0.07  | 1   | 0.148 |       | 79   | 42   |                            |

STECF notes that the correlations between the summed partial Fs for landings of the regulated fisheries and their estimated fishing efforts are insignificant. STECF is unable to determine the reason why the relationship between partial Fs of most Member State fisheries using regulated gears are not significantly correlated with their specific effort estimates. STECF notes that the lack of discards prevents reliable conclusions regarding the effects of fishing effort management in relation to cod in the Irish Sea.

### Effort regime evaluation for the Celtic Sea

The review of trends in fisheries-specific effort and catches in the Celtic Sea is presented at the level of aggregation for the fisheries defined in the multi-annual cod plan, to allow managers to evaluate the data with the view to the potential extension of the cod plan to include the Celtic Sea. The Celtic Sea is defined into two management areas, i.e. ICES Sub-divisions 7bcefghjk and ICES Sub-divisions 7fg. In terms of kW\*days, France contributed 38

%, Ireland 22%, England and Wales 17%, the Netherlands 6%, Belgium 5%, Scotland 4%, Spain 4%, Germany 3% and Denmark 2% (2012).

Trends in fishing effort for the sensitive cod gears and non-regulated gears are presented in the Report. Spanish data are only included for 2012 as no data for earlier periods have been submitted by the Spanish Authorities. The demersal fisheries are dominated by the gears TR1, TR2 and BT2. In recent years (since 2008) fishing effort has been relatively stable, with the increase in 2012 due to the inclusion of Spanish data for 2012 only. Total effort for countries excluding Spain has remained stable overall. For “unregulated” gears most of the effort is Dutch, French, Danish and Irish pelagic trawl fisheries, with a recent (since 2009) increase of Danish and Irish pelagic boats fishing for boarfish in the Celtic Sea.

STECF notes that the correlations between the summed partial F of catches from all regulated gears and their specific effort estimates in kW days at sea over the main fisheries (effort regulated fisheries in the cod plan) are insignificant in the entire Celtic Sea (7bcefgjhjk). However, the relations between summed partial F of catches and fishing effort from all regulated gears become significant when the area is reduced to the ICES subdivisions 7fg. While good correlation does not always mean ‘cause and effect’, the results here suggest that management of fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures.

#### **Effort regime evaluation for southern hake and Norway lobster**

STECF notes that the major data deficiency in its analyses is the lack of Spanish data in 2010 and 2011. Furthermore it is important to note that Spanish fishing vessels using regulated gears were not granted fishing effort derogations by the Spanish Authorities in 2012 as provided for in Annex IIB to the annual TAC and Quota regulations.

The nominal effort of regulated gears (3a-c) declined by 17% during 2007-2012 and by 5% from 2009 to 2012. The major effort regulated gears are the bottom trawls. Bottom trawl effort subject to effort regulation decreased by 18% since 2007 and by 13% since 2009. Given that Spain has not provided data for small vessels (LOA<10m) and that Portuguese data do not provide gear or fishery specific information, STECF is unable to conclude on the effects of small vessels. STECF is also unable to estimate trends in the maximum fishing effort in days at sea per year and the annual uptake of that effort by regulated fisheries due to data deficiencies.

In 2012, Spanish and Portuguese regulated bottom trawls landed at least half of the hake and anglerfish and the 95% of *Nephrops* caught in Divisions VIIIc-IXa. In general, the landings of southern hake, *Nephrops* and anglerfish reported in response to the DCF data call are substantially lower than the figures used by ICES (2013). The LPUE for hake displays a continuous increase since 2004, and catch rates (CPUE OR LPUE) of *Nephrops* in 9a have continuously decreased since 2006. The same trend is apparent in both the data submitted to STECF in response to the DCF data calls and the data estimated by ICES.

Depending on data availability and expected data revisions, STECF will address and accomplish the ToR during its forthcoming meeting STECF EWG 13-13 in October 2013.

#### **Effort regime evaluation for Western Channel sole**

STECF notes the majority of fishing effort deployed in the Western Channel is effort that is not being regulated by the Management plan for sole in Division VIIe. The two regulated gear groups, beam trawls and the static nets, account for only a relatively small proportion (about 15%) of the overall deployed effort.

The effort (kW days at sea) of gear groups regulated by fishing effort appears to have remained stable since 2009 after a major drop prior to 2008. From 2009-2012, the reported regulated beam trawl ( $\geq 80$  mm) effort steadily increased and by 2012 was 17% higher compared with 2009. Over the same period, the lower reported effort by regulated static nets ( $< 220$  mm) decreased by 42%. The effort from the vessels  $<10$ m fluctuated between 13% and 25% of the effort deployed by the vessels  $>10$ m and shows an increasing trend since 2005.

STECF notes that estimated sole catches are dominated by effort regulated beam trawls (67% in 2012), while static nets contributed a minor share (6% in 2012). STECF reiterates its observation that a relatively high percentage of sole is landed by gears that are not being regulated by this regulation. Sole catches of unregulated gears are in excess of 27% of the overall sole catches in area 7e for each year of the data series (2004-2012). The otter trawl gear is the main unregulated gear involved and accounts for over of 22% of total sole catches.

STECF notes that only UK (England and Wales) had vessels operating under an FDF scheme for the first time in 2012. 7 vessels were operational in the FDF fisheries using the regulated beam trawl gear (3a) and one vessel using the unregulated beam trawl gear (mesh size  $<80$ mm). The total numbers of English vessels operating such gears are 43 and 2 respectively. The effort of the FDF fisheries to the total deployed effort by the regulated beamers (3a) and unregulated beamers amount to 17% and 1% respectively. The catches of sole from to FDF fisheries represent 23% and 28% of the total international catches of the 3a regulated gears and the unregulated beamers, respectively. The specific request regarding sole selectivity of FDF and non- FDF fisheries was deferred to the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy).

STECF estimated the uptake of the permitted fishing effort in units of days at sea per vessel. The results should be interpreted with caution as the estimated ceilings are based on number of active vessels times the number of days allowed. STECF notes that the number of active vessels and their associated days at sea may be overestimated (multiple counted) if they changed regulated gears. For the regulated beam trawl fleet (3a), the English series indicate an increasing uptake (47% - 95%) over time whereas the Belgian and the French regulated beam trawl fleet show a stable uptake on a low (around 10%) and high level (around 65%) respectively. The English regulated static gear (3b) show a slight increase in uptake (20%-40%) over time whereas the French regulated static gear show a stable uptake of around 45%. National amendments to the effort regulations were granted to UK in 2011. STECF concludes that if a fishing effort regime in the Western Channel is to be maintained, it would be appropriate to use an alternative measure of effective unit of fishing effort that takes account of vessel size/power and gear effectiveness.

STECF notes that the correlations between the summed partial Fs for sole landings of the regulated fisheries and their estimated fishing efforts are significant for the period 2005-2012. While good correlation does not always mean 'cause and effect', the results here suggest that management of fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures for the

regulated gears. The lack of discard information in the assessment and forecast of fishing opportunities should be considered when assessing management risks.

### **Effort regime evaluation for the Western Waters and Deep Sea**

In accordance with the Terms of reference, the Report presents trends in effort for defined fisheries (major gear groups) for 18 management areas within the convention areas of ICES and CECAF. The requested sections on catches and CPUE (comments, table and graphs) could not be updated due to resource constraints during the EWG 13-06. The EWG experienced extreme difficulties in preparing the data and the interpretation of them is confounded by data deficiencies described in section 4 of the report. STECF also notes that discard information is often scarce.

Effort within the Deep sea and Western waters has been compiled for kW\*days-at-sea, GT\*days-at-sea, and numbers of vessels. Within the report the focus is on kW\*Days at sea. Information on GT\*days at sea and numbers of vessels, landings, discards, CPUE and LPUE is available via the website (electronic appendixes to the report): <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

Bottom trawl effort is concentrated in ICES Area VI as well as the Continental shelf and slope to the west and southwest of Ireland and the UK. Bottom trawl effort in the Bay of Biscay, the Cantabrian Sea and off the Portuguese coast increased in 2012 compared to 2010 and 2011. Beam trawling is concentrated in the Celtic sea and the western English Channel. While beam trawls are not a deepwater gear some of the species caught are classified under Annex 2 of the deep sea regulation. Pelagic trawling was concentrated to the west of Ireland, and to the west and north of Scotland in the mid 2000s. This effort decreased greatly between 2007 and 2009, increased again in 2010, but has reduced again in 2011 and 2012. Longline effort was concentrated on the shelf and slope between Shetland and Portugal but has been in decline in recent years. Longline effort from the Azores has shown an increase since 2009. In the mid 2000s gill net effort was concentrated in the Celtic sea and Porcupine Bank. Due to existing restrictions in the use of deepwater gill nets much of this effort is now concentrated in the Celtic sea, with some effort in the North sea, west of Scotland and the Bay of Biscay.

### **Effort regime evaluation for the Bay of Biscay**

STECF notes that all the analyses and trends presented in the Report include data from Spain for 2012. However, Spain did not provide corresponding data for previous years to the DCF data call for fishing effort regime evaluations. In interpreting the trends in fishing effort and landings, it is important to take into account that data from Spain for years prior to 2102 are not included in the tables and graphs presented in the Report. Furthermore, data on discards is scarce and patchy and in some cases, is of dubious quality.

STECF notes that the multiannual plan for the sustainable exploitation of the stock of sole in the Bay of Biscay (R (EC) 388/2006) prescribes maximum annual fishing capacity for Member States' vessels that hold a special permit to fish. The Report provides fisheries-specific catch and effort data for the Northern Bay of Biscay (ICES Div. VIIIa) and the southern Bay of Biscay (ICES Div. VIIIb). In VIIIa, 90% of the reported deployed effort in 2012 was French, 9% Spanish and 1% Belgian. The main French fisheries are otter trawl, trammel net, gill net and pelagic trawls. The main Spanish fisheries are longline, otter trawl and gill net. In VIIIb, 69% of the reported deployed effort in 2012 was French, 25% Spanish

and 6% Belgian. The main French fisheries are otter trawl, trammel net, gill net, longline and pelagic trawl. The main Spain fisheries are otter trawl, longline and pelagic trawl.

Due to data deficiencies, STECF was unable to fully evaluate the effort regime for sole in the Bay of Biscay. France and Spain provided the data on trends in fishing capacity requested in the data call, in the unit of gross tonnage and for the year 2012 only.

From 2010 to 2012 the overall trend in fishing effort in units of kW days at sea increased by 4% in the area VIIIa and by 35% in VIIIb, although this observation is largely due to the inclusion of Spanish data for 2012 only. During 2010-2012, less than 50% of the reported deployed effort (kW days at sea) was accounted for by vessels carrying the special fishing permit in area VIIIa. In area VIIIb, the relative contribution of licensed vessels varied between 57% and 68%.

During 2010-2012, small boats (LOA<10m) contributed about 20% to the effort deployed in area VIIIa and about 10%-15% in area VIIIb after significant increases in deployed effort by small boats for earlier years in both areas. Spain has not provided any information regarding deployed fishing effort of small boats operating in the Bay of Biscay.

STECF notes that the correlations between the summed partial Fs based only on landings from the major fisheries and the corresponding reported fishing effort are significant in area 8a but insignificant in area 8b. As those analyses do not take account of discards and the time series do not incorporate Spanish data, there results are questionable and may not be representative.

**EXPERT WORKING GROUP REPORT**

**REPORT TO THE STECF**

**EXPERT WORKING GROUP ON  
FISHING EFFORT REGIME EVALUATIONS  
PART 1 (EWG-13-06)**

**BRUSSELS, 17-21 June 2013**

This report does not necessarily reflect the view of the STECF and the European Commission and in no way anticipates the Commission's future policy in this area

## 1 EXECUTIVE SUMMARY

STECF EWG 13-06 notes that it has extensively addressed the ToR regarding the requested fishing effort regime evaluations in the

11. Eastern and Western Baltic,
12. the Kattegat,
13. the Skagerrak, North Sea, European waters in ICES Div.2 and the Eastern Channel,
14. to the West of Scotland,
15. Irish Sea,
16. Celtic Sea,
17. Atlantic waters off the Iberian Peninsula,
18. Western Channel,
19. Western Waters and Deep Sea
20. and the Bay of Biscay,

i.e. updated estimates of trends in fishing effort, landings and discards by species, CPUE and LPUE by fisheries and species, and partial fishing mortalities for effort regulated and non-regulated fisheries by Member States. Few ToR could not be accomplished due to time constraints and/or data deficiencies and will be accomplished during the forthcoming STECF EWG 13-13 fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Outstanding ToRs are those dealing with the requested comparative analyses regarding cod and sole selectivity of fully documented fisheries (FDF) and fisheries not participating in FDF schemes, detailed evaluations of the national implementation as regards fishing effort derogations granted under the provisions of article 13 of the new cod plan (Counc. Reg. No 1342/2008), as well as spatio-temporal patterns in cod catchability.

STECF EWG 13-06 tasks have been supported by the DCF fishing effort data call in 2013. STECF EWG 13-06 notes a general improvement in data completeness and quality as well as compliance with dead lines regarding Member States' data provisions. However, STECF EWG 13-06 suffered again from delays, incompleteness and erroneous data submissions and re-submissions. Details about the DCF data call definitions, data quality in 2013 and significant shortfalls as identified by JRC and the experts contributing to the working group are summarized in section 4.

STECF EWG 13-06 notes that its recommendations in 2012 to amend the 2013 DCF data call to support fishing effort regime evaluation have been implemented and that these changes have supported and will support the accomplishment of specific ToR. STECF EWG 13-06 noted that the DCF data call in 2013 required re-submissions of re-aggregated data in addition to the re-quested data update for 2012, which implied additional workload for the national institutions involved in the DCF framework. Notably Denmark, Portugal and UK (without Scotland) have revised their complete time series of fisheries specific catch and effort data. Spanish data were made available for 2012 and discard data were inserted to earlier data submissions to support the effort regime evaluation for Southern hake and Nephrops.

STECF EWG 13-06 notes that ICES (WGMIXFISH 2013) has undertaken a detailed comparison of the 2011 ICES fisheries data received in 2013 and the 2011 STECF DCF effort data received and compiled in 2012. While the fisheries specific data on landings and nominal effort are found highly consistent, the ICES estimates of discards were consistently higher than the estimates of discards provided in the STECF data base. The pronounced differences in discard estimates are mainly due to different raising procedures applied and shall be further analysed in order to identify best and consistent practices applied to discard raising (section 4.12).

STECF EWG 13-06, in response to the general increased interest in discard estimates, has proposed an Index of Discard Coverage DQI to facilitate the use of the discard estimates provided in the STECF data bases on fisheries specific catch and fishing effort and obtained through the 2013 DCF data call. The DQI allows identification and avoidance of the use of discard estimates by fisheries based on the proportion of sums of national landings covered by discard estimates in relation to the overall sums of national landings. The method to derive the DQI and the interpretation of the results are provided in section 4.5 of the present report.

STECF EWG 13-06 notes that all resulting fisheries parameters of various fishing effort regimes are downloadable at the requested aggregation in the format of digital Appendixes to the present report at the working group's web page: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>.

Major findings regarding the regional fishing effort regime evaluations as derived by STECF EWG 13-06 are summarized in the following sections, specifically for each of the reviews undertaken and covering new or additional ToR as appropriate.

### **Effort regime evaluation for the Baltic**

STECF EWG 13-06 notes that fisheries specific effort and catch (landings and discards) figures by Member States have been updated until and including 2012. During 2011-2012, the total effort measured in kW days at sea deployed in the Baltic decreased by 46%. The reduction was mainly seen in cod plan area C (86%) and in area B (29%), while the nominal effort in area A increased slightly (4%). Furthermore, the significant reduction in overall fishing effort happened in un-regulated gears while the deployed effort of regulated gears remained rather constant in both cod plan areas A and B.

With a lack of information from Estonia, small boats <8m LOA were found to constitute 7 and 12% to the overall effort deployed in the Baltic in 2011 and 2012, respectively. Small boats are primarily operating in the northern cod plan area C.

STECF EWG 13-06 undertook a provisional quantitative analysis regarding the estimation of effort deployed in units of days at sea by Member State, and compared the national uptake with the calculated maximum effort available. STECF EWG 13-06 notes that its approach to estimate the maximum days at sea available per year and Member State from the product of its number of active vessels using one of the regulated gears times the days at sea per vessel can only serve as an approximation of the effort ceiling. The provision uptake analysis revealed that the average annual uptake of available days at sea over the time period 2008-2012 remained in the range of 36-38% in area A, 34-47% in the area B and 53-83% for the areas A and B combined.

The effort regulated otter trawls are the major cod gears, contributing 67 and 82% to the catch in areas A and B in 2012, respectively. The second among the ranked cod gears are gill nets. Cod discards are generally low but slightly higher for area B, showing an increasing trend in most recent years for regulated otter trawls.

According to the submitted information only Denmark has operated under the scheme of fully documented fisheries (FDF) in 2012 in the Baltic. The reported Danish catch of cod caught in fully documented fisheries with regulated gears amounted to 333 t in area A and 406 t in area B, a relative amount of 3% of the overall catch. A preliminary analyses of cod selectivity revealed that non-FDF fisheries were catching younger fish. However, the effects of different age reading methods applied in different national institutes remain unclear. Such preliminary results require further investigation.

Close correlations between fishing mortality and fishing effort measured in kW days at sea as well as between partial fishing mortalities and the specific fishing effort by fisheries were found. While good correlation does not always mean 'cause and effect', the results here suggest that management of

fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures.

### Effort regime evaluation for the Kattegat

STECF EWG 13-06 notes that all Member States fishing in this area have reported their effort data as requested, including mesh size range categories and derogations and the overall confidence in the results is high. Denmark has revised all data, both catch and effort, for the whole time series. However, the largest relative changes in effort are found in unregulated gears that constitutes a small part of the deployed effort in Kattegat in absolute values.

Fisheries in the Kattegat are almost exclusively conducted by Denmark and Sweden (88% and 11% of the total regulated effort in 2012, respectively) using predominantly trawls and primarily the gear class TR2. The TR2 gear constitutes 90% of the total regulated effort. Beam trawls are forbidden.

There are three effort derogations in place in Kattegat for TR2, CPart13B, CPart13C and CPart11. All the Danish TR2 effort is under the derogation CPart13C from 2010 onwards while the German TR2 effort is partly under the derogation CPart13B between 2010 and 2011. STECF EWG 13-06 notes that the uptake of the regulated gear TR2 exceeds the maximum effort levels defined in the annual TAC and quota regulations since 2010 as Member States applied additional effort allocations under article 13 of the cod plan.

In 2012, the nominal effort (kW days at sea) deployed by small vessels (LOA<10m) constituted 12% of the total effort in the area.

Only Sweden reported under the derogation article 11 in gear category TR2, achieving the <1.5% cod catch by using a sorting grid. This represented 68% of the Swedish TR2 effort in Kattegat 2012. The Swedish sorting grid was until 2009 under the derogation IIA83b in the old cod recovery plan (R (EC) 40/2008), and since it generates a catch composition that is very different from the TR2 'none' gear group it was decided to keep the old derogation in the tables by derogation of the present report. Both IIA83b and CPart11 are considered non-effort (unregulated) gears and are therefore not included in the effort regulated TR2 gear category in the tables and figures below (R (EC) No 1342/2008). The effort deployed by passive gears (GN1, GT and LL1) is relatively small, with a stable share of around 3% of the total regulated effort in 2012. The effort deployed by unregulated gear categories (including effort under the derogation CPart11) was 30% of the total effort in 2012.

According to the ranked regulated gear groups' contributions to cod catch and landings in 2012, only the TR2 is estimated to exceed the level of the cumulative 20% and thus considered subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)).

STECF EWG 13-06 notes that information on fully documented fisheries FDF was only provided by Sweden and only for 2010. FDF fishing effort and catches appear negligible and are not further evaluated.

STECF EWG 13-06 presents the estimated cod CPUE and respective effort transfer factors between donor and receiving regulated gear groups based on averages 2010-2012. Red cells are indicated to be imprecise due to lack of adequate discard information. Yellow cells indicate sufficient sampling and green cells good sampling information. The conversion factors are estimated based on CPUE while LPUE values are also provided.

| Kattegat   |     | receiving gear |     |     |       |       |       | 2010-2012 |      | factor = CPUE donor/CPUE receiving |  |
|------------|-----|----------------|-----|-----|-------|-------|-------|-----------|------|------------------------------------|--|
| donor gear |     | GN1            | GT1 | LL1 | TR1   | TR2   | TR3   | CPUE      | LPUE |                                    |  |
| 3a         | GN1 |                | 1   | 1   | 1     | 1     | 1     | 183       | 50   | if factor > 1 then                 |  |
| 3a         | GT1 | 0.005          |     | 1   | 0.014 | 0.009 | 0.125 | 1         | 1    | factor = 1                         |  |
| 3a         | LL1 | 0.005          | 1   |     | 0.014 | 0.009 | 0.125 | 1         | 1    |                                    |  |
| 3a         | TR1 | 0.388          | 1   | 1   |       | 0.67  | 1     | 71        | 25   | if CPUE=0 or LPUE = 0 then         |  |
| 3a         | TR2 | 0.579          | 1   | 1   | 1     |       | 1     | 106       | 41   | CPUE=1 or LPUE=1                   |  |
| 3a         | TR3 | 0.044          | 1   | 1   | 0.113 | 0.075 |       | 8         | 8    |                                    |  |

STECF EWG 13-06 notes that that ICES did not provide an analytical assessment of cod in the Kattegat in 2013. STECF EWG 13-06 is therefore unable to provide analyses dealing with the partial fishing mortalities by fisheries (metiers), the respective correlations between partial fishing mortality and fishing effort and the review of reductions in fishing mortality of the effort regulated gear groups in relation to the cod plan provisions.

### **Effort regime evaluation for the Skagerrak, North Sea including 2EU and Eastern Channel**

STECF EWG 13-06 notes that in this area, a substantial part of the effort is deployed by Non-European fleets (primarily Norway); this part is not accounted for in this report, except for the part dealing with partial fishing mortalities by fisheries. Norwegian fishing effort is reported to ICES (ICES, 2013). Catch and effort data including the special conditions of the cod management plan in force since 2009 (CPart11 and CPart13) have been provided by all Member States with significant fishing activity in this area. Additionally, distinction is now provided across the various CPart13 specifications (A, B, or C).

The North Sea is the main fishing area (77% of the total 2012 regulated effort in area 3b2), followed by the Eastern Channel (17%, 3b3), while the Skagerrak represents a smaller component (6%, 3b1). In all three sub areas, regulated effort has decreased since 2003. In area 3b2 (North Sea), regulated effort is equally shared between beam trawls and demersal trawls/seines (48% and 46% of total 2012 regulated effort respectively). Small mesh beam trawling (80-119 mm, BT2) and demersal trawls/seines with larger mesh sizes ( $\geq 100$ mm, TR1) are the predominant fisheries. In the Eastern Channel, demersal trawls/seines are also the main gears (65% of the 2012 regulated effort in the area, mainly smaller mesh size 70-99mm TR2), but with beam trawls and passive gears representing important fisheries (19% and 16% of the 2012 regulated effort respectively). The main gears in management area 3b1 (Skagerrak) are demersal trawls/seines (88% of the 2012 regulated effort) with a predominance of TR2.

Fishing effort data provided in the present report were found generally consistent with the information reported by ICES. The overall reduction estimated for 2012 in effort (kW days at sea) of regulated gears in the entire area 3b amounts to 45% as compared with the average 2004-2006 and to 12% as compared with 2011. The reduction of unregulated effort for 2012 of boats LOA $\geq 10$ m declined until 2007 and remained stable since then. The present report also provides trends in uptake of the effort deployed by regulated gears as compared with the maximum effort defined in the annual TAC and Quota regulations. However, these statistics must be interpreted with care as the methods to estimate the fishing effort may differ among Member States and specific fisheries may be subject to special derogations. Since 2003 the effort of small boats (LOA $< 10$ m) increased constantly from 3% to 9% of the overall effort deployed in the entire area 3b (Skagerrak, North Sea and 2EU, Eastern Channel) in 2012.

TR1 and TR2 gears were identified as the major cod catching gears and exceeded the 20% cumulative cod catch in 2012 and are thus considered subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)). The present report also provides the gear rankings and cumulative cod catch figures split by the Skagerrak (area 3b1), the North Sea and 2 EU (area 3b2) and the Eastern Channel (area 3b3) and for the additional stocks of plaice and sole.

In 2012 fully documented FDF represents still a small proportion of the total effort (5.6%), but it's increasing. The significance for the main cod gear TR1 has increased further and is 28.9% of the effort deployed in 2012. All FDF countries contributed to this increase. 2012 cod catches were recorded in fisheries using TR1, TR2, GN1 and Pots, but most catches (94.8% of total FDF catches) were from vessels using TR1 gears. In total, 36% of cod catches by EU vessels were taken during FDF trials. A preliminary analyses of cod selectivity revealed that cod catch compositions at age from FDF fisheries were rather similar to the catch compositions at age from non-FDF fisheries. This effect may be due to the fact that Member States may not have separated the sampling and estimation of the

national catch compositions, which is regarded as a pre-requisite regarding such comparative analyses. The preliminary results require further investigation.

STECF EWG 13-06 presents the estimated cod CPUE (average 2010-2012) and respective effort transfer factors between donor and receiving regulated gear groups by the sub-areas Skagerrak (3b1), North Sea and 2 EU (3b2), and Eastern Channel (3b3). Red cells indicate imprecise values due to lack of adequate discard information. Yellow cells indicate sufficient sampling and green cells good sampling information.

| Skagerrak  |                |       |     |       |       |       |       |       |      | 2010-2012 |      |                            |                           |

The STECF EWG 13-06 presents partial fishing mortalities by regulated fisheries and Member States in relation to the estimated fishing mortality by ICES (2013) and the landings and discards volumes in relation to the estimated total catch for the year available. It can be concluded from the estimated F in 2012 that the annual F reductions stipulated by the cod management plan have been nearly reached. STECF EWG 13-06 notes that estimated unaccounted removals are not any longer considered for years after 2005 in the cod assessment. Discard mortality is generally high but has been reduced significantly since 2008.

STECF EWG 13-06 notes that the correlations between the partial Fs for cod and effort are significant for some important regulated metiers catching cod but insignificant for others. In all three sub-areas 3b1, 3b2 and 3b3, the summed partial Fs of cod for regulated gears and respective sums of fishing effort in units of kW days at sea are statistically significant. While good correlation does not always mean 'cause and effect', the results here suggest that management of fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures.

STECF EWG 13-06 notes that there are indications of reductions in partial Fs from catches of the Scottish TR1 and TR2 fisheries in operating under the provisions of article 13.2.b and c of the cod plan, mainly caused by partial F reductions in the discards of these particular fisheries. The German

and French fisheries operating under the provision of article 13.2.b are either negligible or have reduced their contribution to cod fishing mortalities substantially. STECF EWG 13-06 notes that more detailed analyses of the national partial F reductions as stipulated in article 13 of the cod plan as requested in ToR 9 will be conducted during the forthcoming STECF EWG 13-13 (7-11 October 2013). The report and its appendixes also provide partial Fs of sole plaice and effort trends of regulated gears in the three subareas mentioned.

### Effort regime evaluation for the West of Scotland

The fishery West of Scotland is primarily an otter trawl fishery; beam trawls and static gears are hardly used. However Spanish data is not available for division VIa for 2010-11. In terms of kWdays the overall nominal effort in ICES division VIa displays a decrease of 41% since 2003. The majority of that reduction took place between 2003-2006 and 2009-2011. Effort within regulated gears is 56% less in 2012 compared to 2003. Regulated effort by trawl and seine gears (TR gears under Coun. Reg. (EC) 1342/2008) shows a long term decrease in effort and fell to its lowest level in the time series in 2011, but was stable between 2011 and 2012 for those nations reporting in both years. Overall effort of small boats (LOA<10m) is 10% higher in 2012 compared to 2003 although it has been relatively stable since 2006.

The most important category in terms of cod catch and landings is TR1 with a three year average of 94-99% of the VIa cod catch – and landings - total by weight. The second most important gear category is TR2, which can be seen to be a gear category with Nephrops as the primary landed species. The ranking of these two gear types is consistent whether the 2012 values or a three year average is used but the contribution of TR2 gear to catches has noticeably declined starting in 2008 and to landings from 2009. The contribution to catch cod from all other gear types is less than 1%, but for landings gill nets contribute between 1 and 3%. Based on the relative contribution TR1 is the only gear group where the percentage cumulative cod catch in 2012 exceeded 20% and thus considered subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)).

The table of international conversion factors (Table 5.4.11.1) is based on average CPUE (2010-2012). Discard data are scarce for many regulated gear groups but have been interpreted as well representative for TR1 and TR2.

| West of Scotland |     | receiving gear |     |       |     |       |       | 2010-2012 |      |                            |
|------------------|-----|----------------|-----|-------|-----|-------|-------|-----------|------|----------------------------|
| donor gear       |     | BT1            | BT2 | GN1   | LL1 | TR1   | TR2   | CPUE      | LPUE | factor =                   |
| 3d               | BT1 |                | 1   | 0.143 | 1   | 0.004 | 0.333 | 1         | 1    | if factor > 1 then         |
| 3d               | BT2 | 1              |     | 0.143 | 1   | 0.004 | 0.333 | 1         | 1    | factor = 1                 |
| 3d               | GN1 | 1              | 1   |       | 1   | 0.028 | 1     | 7         | 7    |                            |
| 3d               | LL1 | 1              | 1   | 0.143 |     | 0.004 | 0.333 | 1         | 1    | if CPUE=0 or LPUE = 0 then |
| 3d               | TR1 | 1              | 1   | 1     | 1   |       | 1     | 252       | 33   | CPUE=1 or LPUE=1           |
| 3d               | TR2 | 1              | 1   | 0.429 | 1   | 0.012 |       | 3         | 2    |                            |

Overall the correlation between partial F of cod and estimated fishing effort of regulated gears is statistically significant but negative. STECF EWG 13-06 is unable to determine the reason why there are negative or insignificant relationship between F and effort for the greatest cod contributors to cod catches from VIa. Nevertheless from the information reported by Member States, the management measures in place in VIa have not been successful in achieving a reduction in fishing mortality.

STECF EWG 13-06 further noted that the metier contributing most to partial F of cod is the Scottish TR1 gear operating under special condition CPart13D (fishing west of the management line delimiting the cod recovery zone). Furthermore, there are no indications that the Scottish TR1 fishery working under any of articles 13.2.B, C or D have contributed to a reduction in fishing mortality of cod west of Scotland. STECF EWG 13-06 notes that detailed analyses of the national partial F reductions as stipulated in article 13 of the cod plan as requested in ToR 9 will be conducted during the forthcoming STECF EWG 13-13 (7-11 October 2013).

## Effort regime evaluation for the Irish Sea

During 2003-2010, overall nominal effort (kW\*days at sea) for boats LOA $\geq$ 10m declined continuously by 43%. Since then, the effort remained stable. Since 2010, the effort of regulated gears constituted 62-65% to the overall effort deployed. The trend in fishing effort of regulated gears appears similar with a decrease by 54% during 2003-2010 and remained stable until 2012. Since 2007, the dominating regulated gear is the trawled TR2 (>70%) with an increasing trend (79% in 2012). Since 2009, the cod plan provisions of article 13.2 a, b and c are applied.

During 2006-2012, small boats' effort (LOA<10m) varied without a clear trend and constituted among 12-15% of the overall effort deployed.

STECF EWG 13-06 notes that discard information available within the Irish Sea is incomplete and thus impedes analyses of catch compositions and trends by fisheries. In relation to overall landings of demersa species, Nephrops dominate Irish Sea landings. Over the majority of the period 2003-2012, TR1 landed the greatest proportion of cod (~40%), however this changed in 2011 when the continuing declining trend first fell below the proportions of TR2. This placed TR2 as the top ranked gear from 2012 which has shown only a small variation in proportions since 2010. Based on the relative contributions GN1, TR1 and TR2 are gear groups where the percentage cumulative cod landings in 2012 exceeded 20% and thus are considered subject to annual effort adjustments (Coun. Reg. 1342/2008, art. 12(4)).

STECF EWG notes that the table of international conversion factors is based on average CPUE (2010-2012). LPUEs are used for GN1, GT1, and LL1 fisheries as time series of discard data were not available. TR2 and BT2 are the only two gear categories where discard data was available over the three previous years. A one to one ratio can be seen for BT2 to TR2, but the reverse exchange is lower.

Conversion factors for exchange of effort between gears based on average CPUE 2010-2012. Red cells indicate no discard data available; yellow cells indicate discard information available.

|        | BT2   | GN1   | GT1   | LL1 | TR1   | TR2   | CPUE | LPUE | factor =                   |
|--------|-------|-------|-------|-----|-------|-------|------|------|----------------------------|
| 3c BT2 |       | 0.03  | 0.081 | 1   | 0.172 | 1     | 92   | 59   | if factor > 1 then         |
| 3c GN1 | 1     |       | 1     | 1   | 1     | 1     | 3033 | 3033 | factor = 1                 |
| 3c GT1 | 1     | 0.375 |       | 1   | 1     | 1     | 1136 | 1136 |                            |
| 3c LL1 | 0.011 | 0     | 0.001 |     | 0.002 | 0.013 | 1    | 1    | if CPUE=0 or LPUE = 0 then |
| 3c TR1 | 1     | 0.176 | 0.471 | 1   |       | 1     | 535  | 523  | CPUE=1 or LPUE=1           |
| 3c TR2 | 0.859 | 0.026 | 0.07  | 1   | 0.148 |       | 79   | 42   |                            |

STECF EWG 13-06 notes that the correlations between the summed partial Fs for landings of the regulated fisheries and their estimated fishing efforts are insignificant. STECF EWG 13-06 is unable to determine the reason why the relationship between partial Fs of most Member State fisheries using regulated gears are not significantly correlated with their specific effort estimates. STECF EWG 13-06 notes that the lack of discards prevents reliable conclusions regarding the effects of fishing effort management in relation to the cod plans.

## Effort regime evaluation for the Celtic Sea

STECF EWG 13-06 presents its review of trends in fisheries specific effort and catches in a consistent aggregation of the fisheries defined in the multi-annual cod plan to allow managers to evaluate the data with the view to a theoretical extension of the cod plan to include the Celtic Sea. The Celtic Sea is defined into two management areas, i.e. ICES Sub-divisions 7bcefghjk and ICES Sub-divisions 7fg. In terms of kW\*days, France contributed 38 %, Ireland 22%, England and Wales 17%, the Netherlands 6%, Belgium 5%, Scotland 4%, Spain 4%, Germany 3% and Denmark 2% (2012).

STECF EWG 13-06 presents trends in fishing effort for the sensitive cod gears and non-regulated gears. Spanish data are only included for 2012 as no data for earlier periods were data submitted. The demersal fisheries are dominated by the gears TR1, TR2 and BT2. In recent years (since 2008) fishing effort has been relatively stable, with the increase in 2012 due to the inclusion of Spanish data for this year only, with total effort by countries excluding Spain stable overall. For “unregulated” gears most of the effort is Dutch, French, Danish and Irish pelagic trawl fisheries, with a recent (since 2009) increase of Danish and Irish pelagic boats fishing for boarfish in the Celtic Sea. There was a decrease in fishing effort by unregulated gears in 2011, with a slight increase again in 2012.

While discard information is scarce, the increasing LPUE and CPUE trends in recent years are consistent with the ICES 2013 stock assessment which shows a large increase in stock size following a strong 2010 year class.

STECF EWG 13-06 notes that the correlations between the summed partial F of catches from all regulated gears and their specific effort estimates in kW days at sea over the main fisheries (effort regulated fisheries in the cod plan) are insignificant in the entire Celtic Sea (7bcefghjk). However, the relations between summed partial F of catches and fishing effort from all regulated gears become significant when the area is reduced to the ICES subdivisions 7fg. While good correlation does not always mean ‘cause and effect’, the results here suggest that management of fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures.

#### **Effort regime evaluation for southern hake and Norway lobster**

STECF EWG 13-06 notes that the major data deficiency in its analyses is the lack of Spanish data in 2010 and 2011. Furthermore it is important to note that Spanish fishing vessels using regulated gears were not granted fishing effort derogations in 2012 as stipulated in Annex IIB to the annual TAC and Quota regulations. The nominal effort of regulated gears (3a-c) declined by 17% during 2007-2012 and by 5% during 2009-2012. The major effort regulated gears are the bottom trawls. Bottom trawl effort subject to effort regulation decreased by 18% since 2007 and by 13% since 2009. Given that Spain has not provided data for small vessels (LOA<10m) and that Portuguese data do not provide gear of fishery specific information, STECF EWG 13-06 is unable to conclude on the effects of small vessels. STECF EWG 13-06 is also unable to estimate trends in the maximum fishing effort in days at sea per year and the annual uptake of that effort by regulated fisheries due to data deficiencies.

As for other effort regimes regulated through days at sea, STECF EWG 13-06 notes that if a fishing effort regime with regards to southern hake and Norway lobster is to be maintained, it shall consider an appropriate measure of effective unit of fishing effort to account for vessel size/power and gear effectiveness.

Spanish and Portuguese regulated bottom trawls landed at least half of 8c-9a hake and anglerfish in 2012 and the 95% of Nephrops landings. In general, the DCF landings of southern hake, Nephrops and anglerfish are substantially lower than the figures used by ICES. The LPUE for hake displays a continuous increase, which was also recognized by ICES (2013). Catch rates of Nephrops in 9a are continuously decreasing since 2006 as consistently estimated by STECF EWG 13-06 based on DCF data and by ICES (2013).

Depending on data availability and announced data revisions STECF EWG 13-06 will address and accomplish the ToR during its forthcoming meeting STECF EWG 13-13 in October 2013.

#### **Effort regime evaluation for Western Channel sole**

STECF EWG 13-06 notes the great majority of fishing effort deployed in the Western Channel is non-effort regulated, while the two regulated gear groups, the beam trawls and the static nets, constitute relatively small part (about 15%). The effort in Kw days at sea of gear groups regulated by fishing effort appears to be stable since 2009 after a major drop until 2008. During 2009-2012, the regulated

beam trawl ( $\geq 80$  mm) effort continuously increased by 17% (as compared with 2009), while the lower regulated effort by static nets ( $< 220$  mm) decreased by 42%. The effort from the vessels  $< 10$ m fluctuates between 13% and 25% of the effort deployed by the vessels  $> 10$ m with an increasing trend since 2005.

STECF EWG 13-06 notes that estimated sole catches are dominated by effort regulated beam trawls (67% in 2012), while static nets contributed a minor share (6% in 2012). STECF EWG 13-06 reiterates its observation that a relatively high percentage of sole is landed by non-effort regulated gears. Sole catches of unregulated gears are in excess of 27% of the overall sole catches in area 7e for each year of the data series (2004-2012). The otter trawl gear is the main unregulated gear involved with percentages in excess of 22%.

STECF EWG 13-06 notes that only England had vessels operating under an FDF fisheries for the first time in 2012. 7 vessels were operational in the FDF fisheries using the regulated beam trawl gear (3a) and one vessel using the unregulated beam trawl gear. The total numbers of English vessels operating these gears are 43 and 2 respectively. The effort of the FDF fisheries to the total deployed effort by the regulated beamers (3a) and unregulated beamers amount to 17% and 1% respectively. The catches of sole from FDF fisheries represent 23% and 28% of the total international catches of the 3a regulated gears and the unregulated beamers, respectively. The specific request regarding sole selectivity of FDF and non-FDF fisheries was deferred to the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy).

STECF EWG 13-06 estimated the uptake of the allowed fishing effort in units of days at sea per vessel. The results shall be interpreted cautiously as the estimated ceilings are based on number of active vessels times the number of days allowed. STECF EWG 13-06 notes that the number of active vessels and their days at sea may be overestimated (multiple counted) if they changed regulated gears. For the regulated beam trawl fleet (3a), the English series indicate an increasing uptake (47% - 95%) over time whereas the Belgian and the French regulated beam trawl fleet show a stable uptake on a low (around 10%) and high level (around 65%) respectively. The English regulated static gear (3b) show a slight increase in uptake (20%-40%) over time whereas the French regulated static gear show a stable uptake of around 45%. National amendments to the effort regulations were granted to UK in 2011. STECF EWG 13-06 concludes that if a fishing effort regime in the Western Channel is to be maintained, it shall consider an appropriate measure of effective unit of fishing effort to account for vessel size/power and gear effectiveness.

STECF EWG 13-06 notes that the correlations between the summed partial  $F_s$  for sole landings of the regulated fisheries and their estimated fishing efforts are significant for the period 2005-2012. While good correlation does not always mean 'cause and effect', the results here suggest that management of fishing mortality by fishing effort in units of kWdays may provide a useful auxiliary measure to catch constraints and technical measures. The lack of discard information in the assessment and forecast of fishing opportunities shall be considered when assessing management risks.

### **Effort regime evaluation for the Western Waters and Deep Sea**

In accordance with its ToR STECF EWG 13-06 presents trends in effort of defined fisheries (major gear groups) for 18 management areas within the convention areas of ICES and CECAF. The requested sections on catches and CPUE could not be updated due to time constraints (comments, table and graphs). The EWG experienced extreme difficulties in preparing the data and the interpretation of them is confounded by data deficiencies described in section 4 of the present report. STECF 13-06 also notes that discard information is often scarce.

Effort within the Deep sea and Western waters has been compiled for kW\*days-at-sea, GT\*days-at-sea, and numbers of vessels. Within the report the focus is on kW\*Days at sea. Information on GT\*days at sea and numbers of vessels, landings, discards, CPUE and LPUE is available via the website (electronic appendixes to the report): <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

Bottom trawl effort is concentrated in ICES Area IV as well as the Continental shelf and slope to the west and southwest of Ireland and the UK. Bottom trawl effort in the Bay of Biscay, the Cantabrian Sea and off the Portuguese coast increased in 2012 compared to 2010 and 2011. Beam trawling is concentrated in the Celtic sea and the western English Channel. While beam trawls are not a deepwater gear some of the species caught are classified under Annex 2 of the deep sea regulation. Pelagic trawling was concentrated to the west of Ireland, and to the west and north of Scotland in the mid 2000s. This effort decreased greatly between 2007 and 2009, increased again in 2010, but has reduced again in 2011 and 2012. Longline effort was concentrated on the shelf and slope between Shetland and Portugal but has been in decline in recent years. Longline effort from the Azores has shown an increase since 2009. In the mid 2000s gill net effort was concentrated in the Celtic sea and Porcupine Bank. Due to current restrictions in the use of deepwater gill nets much of this effort is now concentrated in the Celtic sea, with some effort in the North sea, west of Scotland and the Bay of Biscay.

### **Effort regime evaluation for the Bay of Biscay**

STECF EWG 13-06 notes that all analyses and presented trends do include Spanish data for 2012, as Spain did not provide respective data from previous years to the DCF data call for fishing effort regime evaluations. The resulting trends in fishing effort and landings shall be interpreted bearing in mind that the Spanish data are not considered before 2012 and that discard information is scarce and dubious in certain cases.

STECF EWG 13-06 notes that the multiannual plan for the sustainable exploitation of the stock of sole in the Bay of Biscay (R (EC) 388/2006) stipulates provisions regarding maximum annual fishing capacity of the vessels holding the special fishing permit per Member State. In accordance with the ToR, STECF EWG 13-06 provides fisheries specific catch and effort data for the Northern Bay of Biscay (ICES Div. 8a) and the southern Bay of Biscay (ICES Div. 8b). In 8a, 90% of 2012 effort is French, 9% Spain and 1% Belgium. The main French fisheries are otter, trammel, gill and pelagic trawls. The main Spain fisheries are longline, otter and gill. In 8b, 69% of effort in 2012 is French, 25% Spain and 6% Belgium. The main French fisheries are otter, trammel, gill, longline and pelagic trawl. The main Spain fisheries are otter, longline and pelagic trawl.

Due to data deficiencies, STECF EWG 13-06 was unable to fully evaluate the effort regime for sole in the Bay of Biscay. France and Spain provided the requested information regarding trends in fishing capacity in the unit of gross tonnage only for 2012. From 2010 to 2012 the overall trend in fishing effort in units of kW days at sea increased by 4% in the area 8a and by 35% in 8b, mainly because Spanish data became available in 2012. During 2010-2012, less than 50% of the kW days at sea were deployed by vessels carrying the special fishing permit in area 8a. In area 8b, the relative contribution of licensed vessels varied among 57 and 68%.

During 2010-2012, small boats (LOA<10m) contributed about 20% to the effort deployed in area 8a and about 10-15% in area 8b after significant increases from lower levels. Spain has not provided information regarding fishing effort of small boats operating in the Bay of Biscay.

STECF EWG 13-06 notes that the correlations between the summed partial Fs for landings of the major fisheries and their estimated fishing efforts are significant in area 8a but insignificant in area 8b. As the analyses do not include discards and the time series lack Spanish fisheries, STECF EWG 13-06 does not further interpret the fisheries specific correlations between partial F and fishing effort.

## **2 RECOMMENDATIONS OF THE WORKING GROUP**

The EWG 13-06 has no specific recommendations.

### 3 INTRODUCTION

The STECF EWG 13-06 met during 17-21 June 2013 at the Albert Borschette Conference Centre, Rue Froissart 36, 1040 Brussels, Belgium. The meeting started by 9 am on 17 June and was adjourned by 4 pm on 21 June 2013. Working conditions provided were considered optimum apart from the fact that connection to the ftp server through the internet was impossible. Such connection is considered essential for meetings dependent on immediate and intensive DCF data exchange.

The STECF EWG 13-06 notes that it was unable to address all ToR due to time constraints and late data availability. Few outstanding tasks are deferred to the second meeting during STECF EWG 13-13, 7-11 October 2013 in Barza d'Ispra, Italy. Sections dealing with incomplete responses to specific tasks are clearly indicated in the present report.

#### 3.1 Terms of Reference for EWG-13-06 and EWG 13-13

##### Background

The Commission consults the STECF 'Working Group on fishing effort regime evaluations' on a review of fisheries regulated through fishing effort management schemes adopted in application of

- ✓ the long term plan for cod stocks [R(EC) No 1342/2008],
- ✓ the recovery plan for Southern hake and Norway lobster stocks in the Cantabrian Sea and Western Iberian peninsula [R(EC) No 2166/2005],
- ✓ the multi-annual plan for the North Sea plaice and sole stocks [R(EC) No 676/2007],
- ✓ the multi-annual plan of Western Channel sole stock [R(EC) No 509/2007],
- ✓ the multi-annual plan for the cod stocks in the Baltic Sea [R(EC) No 1098/2007],
- ✓ the multi-annual plan for the sustainable exploitation of the stock of sole in the Bay of Biscay [R(EC) No 388/2006],
- ✓ R(EC) No 2347/2002 establishing specific access requirements and associated conditions applicable to fishing for deep sea stocks, and
- ✓ R(EC) No 1954/2003 on the management of the fishing effort relating to certain Community fishing areas and resources – so called Western Waters regime.

The overarching request is for: i) an assessment of fishing effort deployed by fisheries

and métiers which are currently affected by fishing effort management schemes as defined in Annex II of the TAC and Quota Regulations Regulation and including an assessment of fishing effort deployed by fisheries and métiers which would be affected by the extension of the cod recovery plan to the Celtic Sea and an assessment of effort in the Biscay sole fishery.); ii) an assessment of effort in the Baltic Sea and iii) an assessment of effort in Deep Sea and Western Waters regimes.

There will be two meetings of this STECF Working Group which will take place from 17 to 21 June 2013 and from 07-11 October 2013.

**Terms of Reference: see Annex**

## Annex

### 1 – Assessment of fishing effort deployed by fisheries and métiers which are currently affected by fishing effort management schemes defined in **the Baltic Sea cod management plan R(EC) No 1098/2007**

#### Terms of Reference:

1. To provide historical series, as far back in time as possible, according to each of the following fishing areas:

*Areas covered by the R(EC) No 1098/2007 (Baltic Sea)*

- (i) ICES division 22 to 24,
- (ii) ICES divisions 25 to 28, by distinguishing areas 27 and 28.2
- (iii) ICES divisions 29 to 32,

The data should also be broken down by

Member State;

Regulated gear types defined in **R(EC) No 1098/2007** (and by associated special conditions defined in the Appendix 6 of the data call );

Unregulated gear types catching cod in fishing areas (i), (ii) and (iii);

for the following parameters:

- a. Fishing effort, measured in kW.days and in GT.days
- b. Fishing activity measured in days absent from port (according to definitions adopted in R(EC) No 1098/2007) and fishing capacity measured in kW, GT and in number of vessels concerned per year.
- c. Catches (landings and discards provided separately) of cod in the Baltic Sea by weight and by numbers at age.
- d. Catches (landings and discards provided separately) of non-cod in the Baltic Sea by species, by weight and by numbers at age
- e. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of cod in the Baltic Sea (such data shall be issued by Member state, fishing area (i), (ii) and (iii) and fishing gear concerned in accordance with **Art. 3 of R(EC) No 2187/2005**).

2. To assess the fishing effort and catches (landings and discards separately) of cod in the Baltic Sea and associated species corresponding to vessels of length overall smaller than 8 metres in each fishery, by gear and by Member State.

3. To quantify the evolution of the calculated maximum effort in units of days at sea allocated annually to the cod fleet (regulated gear types) and the uptake of this effort.

4. To assess the catches (absolute values, landings and discards provided separately) and effort deployed in 2011 and 2012 corresponding to vessels participating in trials on fully documented fisheries FDF, by species, by gear and Member State, with the aim to determine the quality of the data submitted, the potentials and limitations of the fully documented fisheries and to what extent in particular catches (absolute values, landings and discards provided separately) differs from the figures estimated by the STECF for vessels not participating in these trials. STECF is requested to quantify and comment on the extent of changes in cod selectivity by FDF fisheries in comparison with the fisheries not participating in FDF schemes. If discard values are not provided or it is 0, the assessment should be made on basis of reported catch composition and its age structure. .

5. To plot, the spatial distribution of the fishing effort in unities of hours fished by regulated gears deployed in the Baltic Sea, according to data reported in logbooks on the basis of ICES statistical rectangles and to provide interpretation of any changes or trends.

6. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards discard estimates of cod and pelagic species.

7. To assess and present in a tabular form the annual partial fishing mortalities of cod, for landings and discards separately, as generated by the effort regulated gears and the non-regulated gears by fishing areas and Member States, the latter non-regulated gears as a single lump group. The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by fishing areas and Member States.

8. To identify, based on available data on fisheries specific landings and effort by statistical rectangle, ways to estimate standardised catchability indices for cod in the Baltic, considering the best practice to account for discards and to raise landings to catch figures. Detailed maps on estimated annual cod catchability indices shall then be presented for these areas.

**2 – Assessment of fishing effort deployed by fisheries and métiers which are currently affected by fishing effort management schemes defined in the Kattegat (Annex IIA to Regulation (EC) No 43/2012 and 44/2012)**

**Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing area:

Kattegat (ICES functional unit IIIaS)

The data should also be broken down by

Member State;

Regulated gear types defined in **Annex I to R(EC) No 1342/2008** (and by associated special conditions defined in the Appendix 6 of the data call );

Unregulated gear types catching cod;

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days, in number of vessels concerned.
- b. Catches (landings and discards provided separately) of cod by weight and by numbers at age.
- c. Catches (landings and discards provided separately) of non-cod by species, by weight and by numbers at age
- d. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of cod (such data shall be issued by Member state, fishing area and fishing effort group designed in **Annex I to R(EC) No 1342/2008**).

2. Based on the information compiled under point (1) above, to rank fishing effort groups as designed in **Annex I to R(EC) No 1342/2008**, on the basis of their contribution to catches including estimated discards and landings expressed in weight of cod.

3. To assess the fishing effort and catches (landings and discards) of cod and associated species corresponding to vessels of length overall smaller than 10 metres in each fishery, by gear (corresponding to regulated and unregulated gear as defined in Annex II framework) and by Member State according to sampling plans implemented to estimate these parameters.

4 To assess the catches (absolute values, landings and discards provided separately) and effort deployed in 2011 and 2012 corresponding to vessels participating in trials on fully documented fisheries, by species, by gear and Member State, with the aim to determine the quality of the data submitted, the potentials and limitations of the fully documented fisheries and to what extent in particular catches (absolute values, landings and discards provided separately) differs from the figures estimated by the STECF for vessels not participating in these trials. STECF is requested to quantify and comment on the extent of changes in cod selectivity by FDF fisheries in comparison with the fisheries not participating in FDF schemes. If discard values are not provided or it is 0, the assessment should be made on basis of reported catch composition and its age structure.

5. To plot, the spatial distribution of the fishing effort in units of hours fished of regulated gears deployed in the Kattegat, according to data reported in logbooks on the basis of ICES statistical rectangles and to provide interpretation of any changes or trends.

6. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards the discard estimates of cod, Norway lobster and pelagic species.

7. To develop and calculate standard cpue's, lpue's and standard correction factors to be used (within a MS) for transferring effort across gear groups with different cpue (Reg. (EC) No 1342/2008 Art 17, paragraph 5).

Commission Regulation (EU) No 237/2010 article 8(b) describes:

Correction factor = cpue donor gear /cpue receiving gear

The cpue's and lpue's have to be calculated per area per gear group (regulated gear) and presented in a table. Another table shall be provided for the standard correction factors between the regulated gear groups based on each cpue's and lpue's. Correction factors  $\geq 1$  will all be set at value 1.

8. To assess and present in a tabular form the annual partial fishing mortalities of cod, for landings and discards separately, as generated by the effort regulated gears (Annex I to Council Reg. 1342/2008) and the non-regulated gears by Member States, the latter non-regulated gears as a single lump group. The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by Member States.

9. To quantitatively assess the annual trend in cod mortality that would have resulted from the fishing mortality adjustments in Article 7 and the trends in fishing effort that would have resulted from Article 12 of Council Reg. 1342/2008, for the period 2008 to 2012. STECF is then requested to

quantitatively assess the partial cod fishing mortality and fishing effort trends of the regulated gears that were observed during 2008 to 2012. STECF is requested to comment on the questions if and to which extent the Member States application of Article 13, Paragraph 2, points a, b, and c have supported the reduction of cod fishing mortality as defined in Articles 7 and 9 and whether the increased fishing effort deployed by Member States was commensurate with the fishing mortality level to be achieved in 2012. The group is requested to quantify for each Member State and effort group (Annex I to Council Reg. 1342/2008) the partial target fishing mortality of cod, and partial fishing mortality of cod generated in excess of the cod plan, and, if a significant correlation between cod fishing mortality and fishing effort exists, the corresponding amounts of target fishing effort and of the excessive fishing effort in units of kW.days at sea.

**3 – Assessment of fishing effort deployed by fisheries and métiers which are currently affected by fishing effort management schemes defined in the Skagerrak, the North Sea and the Eastern Channel (Annex IIA to Regulation (EC) No 43/2012 and 44/2012)**

**Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing areas:

- (i) Skagerrak (ICES functional Unit IIIaN),
- (ii) North Sea (EC waters of ICES sub-area IIa and ICES sub-area IV),
- (iii) Eastern channel (ICES division VIIId)

The data should also be broken down by

Member State;

Regulated gear types designed in **Annex I to R(EC) No 1342/2008** (and by associated special conditions defined in the Appendix 6 of the data call);

Unregulated gear types catching cod, sole and plaice in fishing areas (i), (ii) and (iii);

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days, in number of vessels concerned and days at sea for the sole and plaice fishery.
- b. Fishing capacity in kW.
- c. Catches (landings and discards provided separately) of cod, sole and plaice by weight and by numbers at age.
- d. Catches (landings and discards provided separately) of non-cod, non-sole and non-plaice by species, by weight and by numbers at age.
- e. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of cod, sole and plaice (such data shall be issued by Member state, fishing area and fishing effort group designed in **Annex I to R(EC) No 1342/2008**).

2. Based on the information compiled under point (1) above, to rank fishing effort groups as designed in **Annex I to R(EC) No 1342/2008**, on the basis of their contribution to catches including discards and landings expressed in weight of cod, sole and plaice.

3. To assess the fishing effort and catches (landings and discards) of cod, sole and plaice and associated species corresponding to vessels of length overall smaller than 10 metres in each fishery, by gear (corresponding to regulated and unregulated gear as defined in Annex II framework) and by Member.

4. To assess the catches (absolute values, landings and discards provided separately) and effort deployed in 2011 and 2012 corresponding to vessels participating in trials on fully documented fisheries, by species, by gear and Member State, with the aim to determine the quality of the data submitted, the potentials and limitations of the fully documented fisheries and to what extent in particular catches (absolute values, landings and discards provided separately) differs from the figures estimated by the STECF for vessels not participating in these trials. STECF is requested to quantify and comment on the extent of changes in cod selectivity by FDF fisheries in comparison with the fisheries not participating in FDF schemes. If discard values are not provided or it is 0, the assessment should be made on basis of reported catch composition and its age structure.

5. To plot, the spatial distribution of the fishing effort in units of hours fished of regulated gears deployed in the Skagerrak, the North Sea and the Eastern Channel, according to data reported in logbooks on the basis of ICES statistical rectangles and to provide interpretation of any changes or trends.

6. To comment on data quality and highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards the discard estimates of cod, Norway lobster and pelagic species.

7. To develop and calculate standard cpue's, lpue's and standard correction factors to be used (within a MS) for transferring effort across gear groups with different cpue (Reg. (EC) No 1342/2008 Art 17, paragraph 5).

Commission Regulation (EU) No 237/2010 article 8(b) describes:

$$\text{Correction factor} = \text{cpue donor gear} / \text{cpue receiving gear}$$

The cpue's and lpue's have to be calculated per area per gear group (regulated gear) and presented in a table. Another table shall be provided for the standard correction factors between regulated gears groups based on each cpue's and lpue's. Correction factors  $\geq 1$  will all be set at value 1.

8. To assess and present in a tabular form the annual partial fishing mortalities of cod, haddock, saithe (Skagerrak and North Sea only), whiting, plaice (North Sea only) and sole (North Sea only), for landings and discards separately, as generated by the effort regulated gears (Annex I to Council Reg. 1342/2008) and the non-regulated gears by Member States, the latter non-regulated gears as a single lump group. The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by Member States.

9. To quantitatively assess the annual trend in cod mortality that would have resulted from the fishing mortality adjustments in Article 8 and the trends in fishing effort that would have resulted from Article 12 of Council Reg. 1342/2008, for the period 2008 to 2012. STECF is then requested to quantitatively assess the partial cod fishing mortality and fishing effort trends of the regulated gears that were observed during 2008 to 2012. STECF is requested to comment on the questions if and to which extent the Member States application of Article 13, Paragraph 2, points a, b, and c have supported the reduction of cod fishing mortality as defined in Articles 8 and 9 and whether the increased fishing effort deployed by Member States was commensurate with the fishing mortality level to be achieved in 2012. The group is requested to quantify for each Member State and effort group (Annex I to Council Reg. 1342/2008) the partial target fishing mortality of cod, and partial fishing mortality of cod generated in excess of the cod plan, and, if a significant correlation between cod fishing mortality and fishing effort exists, the corresponding amounts of target fishing effort and of the excessive fishing effort in units of kW.days at sea

10. To identify, based on available data on fisheries specific landings and effort by statistical rectangle, ways to estimate standardised catchability indices for cod, plaice and sole in areas Skagerrak, North Sea and Eastern Channel and 2EU, considering the best practice to account for discards and to raise landings to catch figures. Detailed maps on estimated annual catchability indices by species shall then be presented for these areas.

**4 – Assessment of fishing effort deployed by fisheries and métiers which are currently affected by fishing effort management schemes defined in the West of Scotland (Annex II A to Regulation (EC) No 43/2012 and 44/2012)**

**Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing area:

West of Scotland (ICES division VIa and EC waters of Vb)

The data should also be broken down by

Member State;

Regulated gear types designed in **Annex I to R(EC) No 1342/2008** (and by associated special conditions defined in Appendix 6 to the data call as far as relevant);

Unregulated gear types catching cod;

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days and in number of vessels concerned
- b. Catches (landings and discards provided separately) of cod by weight and by numbers at age.
- c. Catches (landings and discards provided separately) of non-cod by species, by weight and by numbers at age.
- d. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of cod (such data shall be issued by Member state, fishing area and fishing effort group designed in **Annex I to R(EC) No 1342/2008**).

2. Based on the information compiled under point (1) above, to rank fishing effort groups as designed in **Annex I to R(EC) No 1342/2008**, on the basis of their contribution to catches including discards and landings expressed in weight of cod.

3. To assess the fishing effort and catches (landings and discards) of cod and associated species corresponding to vessels of length overall smaller than 10 metres in each fishery, by gear (corresponding to regulated and unregulated gear as defined in Annex II framework) and by Member State.

4. To plot, the spatial distribution of the fishing effort in units of hours fished of regulated gears deployed in the West of Scotland, according to data reported in logbooks on the basis of ICES statistical rectangles and to provide interpretation of any changes or trends.

5. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards discard estimates of cod, Norway lobster and pelagic species.

6. To develop and calculate standard cpue's, lpue's and standard correction factors to be used (within a MS) for transferring effort across gear groups with different cpue (Reg. (EC) No 1342/2008 Art 17, paragraph 5).

Commission Regulation (EU) No 237/2010 article 8(b) describes:

Correction factor = cpue donor gear /cpue receiving gear

The cpue's and lpue's have to be calculated per area per gear group (regulated gear) and presented in a table. Another table shall be provided for the standard correction factors between regulated gear groups based on each cpue's and lpue's. Correction factors  $\geq 1$  will all be set at value 1.

7. To assess and present in a tabular form the annual partial fishing mortalities of cod, haddock, saithe (VIa only), for landings and discards separately, as generated by the effort regulated gears (Annex I to Council Reg. 1342/2008) and the non-regulated gears by Member States, the latter non-regulated gears as a single lump group. The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by Member States.

8. To quantitatively assess the annual trend in cod mortality that would have resulted from the fishing mortality adjustments in Article 7 and the trends in fishing effort that would have resulted from Article 12 of Council Reg. 1342/2008, for the period 2008 to 2012. STECF is then requested to quantitatively assess the partial cod fishing mortality and fishing effort trends of the regulated gears that were observed during 2008 to 2012. STECF is requested to comment on the questions if and to which extent the Member States application of Article 13, Paragraph 2, points a, b, c and d have supported the reduction of cod fishing mortality as defined in Articles 7 and 9 and whether the increased fishing effort deployed by Member States was commensurate with the fishing mortality level to be achieved in 2012. The group is requested to quantify for each Member State and effort group (Annex I to Council Reg. 1342/2008) the partial target fishing mortality of cod, and partial fishing mortality of cod generated in excess of the cod plan, and, if a significant correlation between cod fishing mortality and fishing effort exists, the corresponding amounts of target fishing effort and of the excessive fishing effort in units of kW.days at sea.

9. To identify, based on available data on fisheries specific landings and effort by statistical rectangle, ways to estimate standardised catchability indices for cod West of Scotland, considering the best practice to account for discards and to raise landings to catch figures. Detailed maps on estimated annual cod catchability indices shall then be presented for this area.

**5 – Assessment of fishing effort deployed by fisheries and métiers which are currently affected by fishing effort management schemes defined in the Irish Sea (Annex IIA to Regulation (EC) No 43/2012 and 44/2012)**

**Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing area:

Irish Sea (ICES division VIIa)

The data should also be broken down by

Member State;

Regulated gear types designed in **Annex I to R(EC) No 1342/2008** (and by associated special conditions defined in Appendix 6 to the data call as far as relevant);

Unregulated gear types catching cod;

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days and in number of vessels concerned
- b. Catches (landings and discards provided separately) of cod by weight and by numbers at age.
- c. Catches (landings and discards provided separately) of non-cod by species, by weight and by numbers at age
- d. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of cod (such data shall be issued by Member state, fishing area and fishing effort group designed in **Annex I to R(EC) No 1342/2008**).

2. Based on the information compiled under point (1) above, to rank fishing effort groups as designed in **Annex I to R(EC) No 1342/2008**, on the basis of their contribution to catches including discards and landings expressed in weight of cod.

3. To assess the fishing effort and catches (landings and discards) of cod and associated species corresponding to vessels of length overall smaller than 10 metres in each fishery, by gear

(corresponding to regulated and unregulated gear as defined in Annex II framework) and by Member State.

4. To plot, the spatial distribution of the fishing effort in units of hours fished of regulated gears deployed in the Irish Sea, according to data reported in logbooks on the basis of ICES statistical rectangles and to provide interpretation of any changes or trends.

5. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards the discard estimates of cod, Norway lobster and pelagic species.

6. To develop and calculate standard cpue's, lpue's and standard correction factors to be used (within a MS) for transferring effort across gear groups with different cpue (Reg. (EC) No 1342/2008 Art 17, paragraph 5).

Commission Regulation (EU) No 237/2010 article 8(b) describes:

$$\text{Correction factor} = \text{cpue donor gear} / \text{cpue receiving gear}$$

The cpue's and lpue's have to be calculated per area per gear group (regulated gear) and presented in a table. Another table shall be provided for the standard correction factors between regulated gear groups based on each cpue's and lpue's. Correction factors  $\geq 1$  will all be set at value 1.

7. To assess and present in a tabular form the annual partial fishing mortalities of cod, for landings and discards separately, as generated by the effort regulated gears (Annex I to Council Reg. 1342/2008) and the non-regulated gears by Member States, the latter non-regulated gears as a single lump group. The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by Member States.

8. To quantitatively assess the annual trend in cod mortality that would have resulted from the fishing mortality adjustments in Article 7 and the trends in fishing effort that would have resulted from Article 12 of Council Reg. 1342/2008, for the period 2008 to 2012. STECF is then requested to quantitatively assess the partial cod fishing mortality and fishing effort trends of the regulated gears that were observed during 2008 to 2012. STECF is requested to comment on the questions if and to which extent the Member States application of Articles 13, Paragraph 2, points a, b, and c have supported the reduction of cod fishing mortality as defined in Article 7 and 9 and whether the increased fishing effort deployed by Member States was commensurate with the fishing mortality level to be achieved in 2012. The group is requested to quantify for each Member State and effort group (Annex I to Council Reg. 1342/2008) the partial target fishing mortality of cod, and partial fishing mortality of cod generated in excess of the cod plan, and, if a significant correlation between

cod fishing mortality and fishing effort exists, the corresponding amounts of target fishing effort and of the excessive fishing effort in units of kW.days at sea.

## **6 – Assessment of fishing effort deployed by fisheries and métiers which will be affected by the extension of the cod recovery plan to the Celtic Sea**

### **Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing area:

- (i) Celtic Sea (total of ICES divisions VIIIb, VIIIc, VIIE, VIIf, VIIg, VIIh, VIIj and VIIk) and
- (ii) combined area Bristol Channel/South-East Ireland (total of the subset of ICES divisions VIIf and VIIg)

The data should also be broken down by:

Member State;

Regulated gear types designed in **Annex I to R(EC) No 1342/2008**;

Unregulated gear types catching cod;

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days and in number of vessels concerned
- b. Catches (landings and discards provided separately) of cod by weight and by numbers at age.
- c. Catches (landings and discards provided separately) of non-cod by species, by weight and by numbers at age.
- d. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of cod (such data shall be issued by Member state and fishing effort groups as designed in **Annex I to R(EC) No 1342/2008**).

2. When providing and explaining data in accordance with point (1), the following **specific question** should be answered as well:

For VIII+VIIg only, identify the **main species** (volume and percentage) caught per gear category, and related trends in recent years. Specify when this calculation has taken account of discards as well.

Special request: to analyse discards and their development per gear type in each of the ICES divisions concerning hake, monkfish and megrim. This analysis should be carried out referring to fish lengths/age of discards.

3. To assess the fishing effort and catches (landings and discards) of cod and associated species corresponding to vessels of length overall smaller than 10 metres in each fishery, by gear (corresponding to regulated and unregulated gear as defined in Annex II framework) and by Member State according to sampling plans implemented to estimate these parameters.

5. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards the discard estimates of cod, Norway lobster and pelagic species.

6. To assess and present in a tabular form the annual partial fishing mortalities of cod, for landings and discards separately, as generated by the gears defined in Annex I to Council Reg. 1342/2008) and the other gears by Member States, the latter other gear groups as a single lump group. The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by Member States.

**7 – Assessment of fishing effort deployed by vessels under the Southern hake and Norway lobster plan (Council Regulation (EC) No 2166/2005) operating in the Atlantic waters of the Iberian Peninsula as specified in Annex IIB of Council Regulation (EC) No 43/2012 and 44/2012**

**Terms of Reference:**

1. The STECF is requested to compile, validate, analyse and assess the following historical data on fishing effort and catches in relation to vessels under the Southern hake and Norway lobster plan (Regulation (EC) 2166/2005):

**details by Member State on both effort (2000-2012) deployed and catches (2003-2012) made by all fishing vessels, included those with less than 10 meters, in each fishery, broken down by age, gear type, and mesh size**

The data should be broken down and assessed by:

Member State;

Regulated gear types, area as laid down in **Annex IIB of Council Regulation (EC) No 43/2012 and 44/2012** and associated special conditions as laid down in Appendix 6 to the data call; unregulated gear types catching hake and Norway lobster;

for the following parameters:

- a. fishing effort measured in kW.days, in GT.days and in number of vessels concerned;
- b. catches (landings and discards provided separately) of hake and Norway lobster by weight and by numbers at age;
- c. catches (landings and discards provided separately) of species other than hake and Norway lobster in areas covered by Annex IIB mentioned above (a particular attention should be paid to Anglerfish catches), by species, by weight and by numbers at age;
- d. landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of hake, Norway lobster and Anglerfish in areas covered by Annex IIB (such data shall be issued by Member state, fishing gear and special conditions listed in **Annex IIB of Council Regulation (EC) No 43/2012 and 44/2012**);

In assessing the data described above, particular attention should be paid to:

the quality of estimates of total catches and discards;

both the fishing effort and catches including landings and discards of hake, Norway lobster, anglerfish, and associated species including pelagics in relation to vessels of overall length smaller than 10 metres in each fishery, by gear (regulated and unregulated gears) and by Member State. The representativeness of data originated from sampling schemes should also be assessed.

to the description of the spatial distribution of the fishing effort of regulated gears deployed in the Atlantic waters of the Iberian Peninsula according to data reported in logbooks on the basis of ICES statistical rectangles with the aim to determine to what extent fishing effort has moved from long distance to coastal areas since the implementation of the fishing effort regime.

An excel table listing the kW.days from 2000 to 2012 broken down per gear type, special condition and Member State should be made available.

to comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards discard estimates of hake, Norway lobster, anglerfish and pelagic species.

2. In the context of the revision of the current Southern hake and Norway lobster recovery plan (Council Regulation (EC) No 2166/2005) and on the basis of the data provided, the STECF is requested to assess the fishing effort regime, in particular commenting on the quality and completeness of these data used to assess the impact of future effort management measures proposed by the Commission.

3. To compare the evaluation of days allocated to the vessels carrying regulated gears (allowed activity) and really used by those vessels.

4. To assess the correlation between fishing mortality rates and the effort in units of kW days at sea deployed by Member States.

If a good correlation between fishing mortality rates and spend fishing effort is found, the WG is asked to explain or describe it. In case the correlation between the nominal fishing effort and the fishing mortality rates is weak, the WG is asked to describe whether this is due to a wrong descriptor (wrong descriptor for fishing capacity) or due to other factors.

5. To identify, based on available data on fisheries specific landings and effort by statistical rectangle, ways to estimate standardised catchability indices for Nephrops, hake and monk in ICES Div. 8c and 9a, considering the best practice to account for discards and to raise landings to catch figures. Detailed maps on estimated annual catchability indices by species shall then be presented for these areas.

**8 – Assessment of fishing effort deployed by fisheries and métiers which are currently affected by fishing effort management schemes defined in the Western Channel (Western Channel sole stocks ICES zone VIIe, Annex IIC to Regulation (EC) No 43/2012)**

**Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing area:

Western Channel (ICES division VIIe)

The data should also be broken down by

Member State;

Regulated gear types designed in **Annex IIC to R(EC) No 43/2012** (and by associated special conditions defined therein as far as relevant);

Unregulated gear types catching sole;

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days and in number of vessels concerned.
- b. Catches (landings and discards provided separately) of sole by weight and by numbers at age.
- c. Catches (landings and discards provided separately) of non-sole by species, by weight and by numbers at age.
- d. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) of sole (such data shall be issued by Member state and fishing gear listed in **Annex IIC to R(EC) No 43/2012**).

2. To assess the fishing effort and catches (landings and discards) of sole and associated species corresponding to vessels of length overall smaller than 10 metres in each fishery, by gear (corresponding to regulated and unregulated gear as defined in Annex II framework) and by Member State according to sampling plans implemented to estimate these parameters.

4 To assess the catches (absolute values, landings and discards provided separately) and effort deployed in 2011 and 2012 corresponding to vessels participating in trials on fully documented fisheries, by species, by gear and Member State, with the aim to determine the quality of the data submitted, the potentials and limitations of the fully documented fisheries and to what extent in particular catches (absolute values, landings and discards provided separately) differs from the figures

estimated by the STECF for vessels not participating in these trials. STECF is requested to quantify and comment on the extent of changes in sole selectivity by FDF fisheries in comparison with the fisheries not participating in FDF schemes.

4. To plot, the spatial distribution of the fishing effort of regulated gears deployed in the Western Channel, according to data reported in logbooks on the basis of ICES statistical rectangles and to provide interpretation of any changes or trends.

5. To quantify the annual days at sea allocated to the vessels carrying regulated gears (allowed activity) and the uptake of such effort allowances.

6. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards the discard estimates of sole, plaice, Norway lobster and pelagic species.

7. To assess and present in a tabular form the annual partial fishing mortalities of sole, for landings and discards separately, as generated by the effort regulated gears (Annex I to Council Reg. 1342/2008) and the non-regulated gears by Member States, the latter non-regulated gears as a single lump group. The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by Member States.

## **9 - Assessment of fishing effort and evaluation of management measures to be assessed in 2009 (Deep sea and Western Waters effort regime)**

### **Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing areas:

- (i) ICES area I (EU waters; non EU waters), only linked to Deep Sea species
- (ii) ICES area II (EU waters; non EU waters), only linked to Deep Sea species
- (iii) ICES area III (EU waters; non EU waters), only linked to Deep Sea species
- (iv) ICES area IV (EU waters; non EU waters), only linked to Deep Sea species
- (v) ICES area V (EU waters; non EU waters)
- (vi) ICES area VI (EU waters; non EU waters)
- (vii) ICES area VII excluding VIIId (EU waters; non EU waters)
- (viii) ICES division VIIId
- (ix) the Biologically Sensitive Area as defined in Article 6 of Reg (EC) No 1954/2003
- (x) ICES area VIII (EU waters; non EU waters)
- (xi) ICES area IX (EU waters; non EU waters)
- (xii) ICES area X (EU waters; non EU waters)
- (xiii) ICES area XII (EU waters; non EU waters), only linked to Deep Sea species
- (xiv) ICES area XIV (EU waters; non EU waters), only linked to Deep Sea species
- (xv) CECAF area 34.1.1 (EU waters; non EU waters)
- (xvi) CECAF area 34.1.2 (EU waters; non EU waters)
- (xvii) CECAF area 34.1.3 (EU waters; non EU waters)
- (xviii) CECAF area 34.2 (EU waters; non EU waters)

The data should also be broken down by

Member State;

The following gear types:

- Regulated gear types
  - Beam trawls
  - Bottom trawls & demersal seines
  - dredges
  - drifting longlines or set longlines (bottom)
  - driftnets or set gillnets
  - trammel nets
  - pots & traps
  
- Unregulated gear types:
  - Pelagic trawls and pelagic seines;
  - longlines (surface)

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days and in number of vessels concerned
  
- b. Catches (landings and discards provided separately) by weight of:
  - 5 most important (in weight landed) demersal species excluding scallops, edible crab, spider crab,
  - Scallops
  - Spider crab and edible crab
  - 5 most important (in weight landed) Deep-sea species (according to Annex I and II of Reg 2347/2002), only related to fisheries which have been identified with special condition DEEP
  - 4 most important (in weight landed) pelagic species, plus always tuna-like species (SKJ,ALB,YFT,BET,SWO).
  
- c. Landings Per Unit of Effort (LPUE) and Catches Per Unit Effort (CPUE) by Member State and gear, given by total catches of the gear divided by kW-days and GT-days.

2. When providing and explaining data in accordance with point (1), the following **specific question** should be answered as well:

Discuss whether additional data on fishing depth and VMS position could improve the analysis and interpretation of deep sea fisheries, and how these data could be called from MS, processes and presented

3. To identify recent effort trends in pelagic fisheries where possible, in particular in areas XI, X and CECAF areas.

4. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards the discard estimates of pelagic species.

**10 – Assessment of fishing effort deployed by fisheries and métiers which are currently affected by the multiannual plan for the sustainable exploitation of the stock of common sole in the Bay of Biscay (R(EC) No 388/2006)**

**Terms of Reference:**

1. To provide historical series, as far back in time as possible, according to each of the following fishing areas:

ICES division VIIIa, and

ICES division VIIIb

The data should also be broken down by:

Member State;

Type of gear (as laid down in **Annex IV of Commission Decision 2008/949/CE**) for regulated vessels (as laid down in **Article 5 of R(EC) No 388/2006**)

Type of gear (as laid down in **Annex IV of Commission Decision 2008/949/CE**) for unregulated vessels (as laid down in **Article 5 of R(EC) No 388/2006**)

for the following parameters:

- a. Fishing effort, measured in kW.days, in GT.days and in number of vessels concerned
- b. Fishing capacity in GT
- c. Catches (landings and discards provided separately) of common sole (*Solea solea*) by weight and by numbers at age.
- d. Catches (landings and discards provided separately) of species other than common sole, by weight and by numbers at age

2. To assess the fishing effort and catches (landings and discards separately) of common sole and associated species corresponding to vessels of length overall smaller than 10 metres in each fishery, by gear and by Member State.

3. To describe the spatial distribution of the fishing effort in units of hours fished deployed in the Bay of Biscay, according to data reported in logbooks on the basis of ICES statistical rectangles, with the aim to determine the spatial distribution of fishing effort and its development among the time period.

4. To comment on data quality and to highlight any unexpected evolutions in the estimated parameters which are not in line with the general trend, in particular as regards discard estimates of sole and pelagic species.

5. To assess and present in a tabular form the annual partial fishing mortalities of sole, for landings and discards separately, as generated by the major gear types and separately for vessels with and without the special fishing permit (>2 tons of sole/a). The trends in gear group specific partial fishing mortalities shall then be compared with (correlated against) the trends in gear group specific fishing effort in units of kW days at sea of the gears mentioned by Member States.

**STECF has defined the following additional Terms of Reference to STECF EWG 13-06 regarding its needs for the intended 7e Western Channel sole management plan review. The EWG is requested to analyse**

- the relationship between fishing mortality or biomass with fishing effort, taking into account partial fishing mortality between fleet segments (including non-regulated).
- different effort units (in particular differences between days-at-sea and kwdays),
- recent changes in management like the introduction of area limitation schemes, initial levels of effort or any other information considered relevant by the EWG.

### **3.2 Participants**

Section 7 of the present report lists the participants of the STECF EWG 13-06.

## **4 DATA USED**

The following sections provide an overview on data definition, acquisition, and evaluation procedures agreed by the expert working group.

There are also provided experts' descriptions regarding the national data features/quality as submitted by the Member States in response to the DCF data call in 2013 for fishing effort regime evaluations.

The national sections provide specific information regarding the nations' methods applied to estimate the days at sea, and if the applied method is regarded as being consistent with the provisions of the DCF or the Control Regulation (Coun. Reg. No. 1224/2009). However, STECF EWG 13-06 is unable to evaluate these national statements.

Furthermore, the national data quality sections for the Baltic provide information regarding the consideration of drifting longlines (LLD) in the effort regulated gear category LONGLINE (LL) of the DCF data calls for fishing effort regime evaluations in 2013 and earlier.

## **4.1 Report Notations**

### *4.1.1 Baltic Sea*

To identify the categories assessed for effort and catch this working group adopts terminology that matches definitions made in the management plan for Baltic cod (R(EC) 1098/2007). This means that all trawls, Danish seines, gill nets, entangling nets or trammel nets with mesh size  $\geq 90$ mm and longlines were assumed to be regulated gears (Table 4.1.1.1). Remaining gear and mesh size combinations were taken to be unregulated gears (Table 4.1.1.2).

However, the definition in the cod management plan is not consistent with regulation R(EC) No 2187/2005). According to the latter regulation it is only permissible to fish for cod with mesh size  $\geq 105$ mm using otter trawls, Danish seines or similar gears. When using static gears mesh size has to be above 110mm. In TOR 1e it is explicitly asked to calculate Landings per Unit of Effort (LPUE) and Catches per Unit Effort (CPUE) of cod in the Baltic Sea by Member State, fishing area and fishing gear concerned in accordance with Art. 3 of R(EC) No 2187/2005. To be consistent within the report we also used the gear categories from the cod management plan (Council Regulation (EC) 1098/2007) for this TOR.

Sub-Areas were defined according to Council Regulation (EC) 1098/2007. This means that Subdivision 22-24 is declared as fishing area "A", Subdivision 25-28 as "B" and Subdivision 29-32 as "C".

Table. 4.1.1.1 Regulated gear types, mesh sizes and special conditions as defined in Reg. (EC) No. 1098/2007.

| <b>Gear</b>   | <b>Mesh Size</b> | <b>SPECON</b> |
|---------------|------------------|---------------|
| OTTER         | >=90mm           | none          |
| OTTER         | >=90mm           | BACOMA        |
| Danish Seine  | >=90mm           | none          |
| Danish Seine  | >=90mm           | BACOMA        |
| Pelagic Trawl | >=90mm           | none          |
| Pelagic Trawl | >=90mm           | BACOMA        |
| Pelagic Seine | >=90mm           | none          |
| Pelagic Seine | >=90mm           | BACOMA        |
| Gill net      | >=90mm           | none          |
| Trammel net   | >=90mm           | none          |
| BEAM          | >=90mm           | none          |
| Longlines     |                  |               |

Table 4.1.1.2 Unregulated gear types, mesh sizes and special conditions as defined in Reg. (EC) No. 1098/2007.

| <b>Gear</b>   | <b>Mesh Size</b> | <b>SPECON</b> |
|---------------|------------------|---------------|
| OTTER         | <90mm            | none          |
| Danish Seine  | <90mm            | none          |
| Pelagic Trawl | <90mm            | none          |
| Pelagic Seine | <90mm            | none          |
| Gill net      | <90mm            | none          |
| Trammel net   | <90mm            | none          |
| Beam Trawl    | <90mm            | none          |
| DREDGE        | all              | none          |
| POTS          | all              | none          |

STECF EWG 13-06 noted that the new variable FISHING\_ACTIVITY\_DAYS was defined in Table D of the 2013 DCF data call to support fishing effort regime evaluations. This new variable required a re-submission of the whole time series of data and generally the Member managed to cover the request. Thus, a new analyses is presented in the Baltic Sea section of the presented report.

#### 4.1.2 Cod Zones Multi-annual Plan

The compilation of effort data as described in this report represents a continuation of a process which was initiated in association with the establishment of recovery plans for various European cod and hake stocks.

In addition to other properties, major gear types are used to identify fisheries which are not effort regulated. The notation and categorisation effort regulated fisheries used has reflected that defined in the relevant technical regulations. The most recent revision of the cod recovery plan, and the associated effort regime are described in Regulation 1342/2008.

Under the revised 'cod plan' the following gear groupings are set out in Annex I of the Regulation together with areas in which they apply. Throughout the report reference is made to gears such as TR1, TR2 etc. Under the revised scheme Member States are allocated 'effort pots' in KW\*days for each category which can then be managed nationally. EU allocated 'days at sea' per vessel are no longer applicable. The following summary of gear and area codes that apply in the current cod plan is taken from Annex 1 of Regulation 1342/2008.

STECF 13-06 notes that, in accordance with the ToR, the areas of the plan for the North Sea cod were split into Skagerrak (3b1), North Sea and 2 EU (3b2) and Eastern Channel (3b3). The present report provides the requested fisheries parameters by these sub-areas 3b1, 3b2 and 3b3.

#### *ANNEX I*

Effort groups are defined by one of the gear groupings set out in point 1 and one of the geographical areas set out in point 2.

##### 1. Gear groupings

(a) Bottom trawls and seines (OTB, OTT, PTB, SDN, SSC, SPR) of mesh:

TR1 equal to or larger than 100 mm,

TR2 equal to or larger than 70 mm and less than 100 mm,

TR3 equal to or larger than 16 mm and less than 32 mm;

(b) Beam trawls (TBB) of mesh:

BT1 equal to or larger than 120 mm

BT2 equal to or larger than 80 mm and less than 120 mm;

(c) Gill nets, entangling nets (GN);

(d) Trammel nets (GT);

(e) Longlines (LL).

##### 2. Groupings of geographical areas:

For the purposes of this Annex, the following geographical groupings shall apply:

(a) Kattegat;

(b) (i) Skagerrak; (ii) that part of ICES zone IIIa not covered by the Skagerrak and the Kattegat;

ICES zone IV and EC waters of ICES zone IIa; (iii) ICES zone VIIId;

(c) ICES zone VIIa;

(d) ICES zone VIa.

This categorisation is relatively simple when compared to that of the previous version of the cod recovery plan, and the number of 'special conditions' under which vessels have differing allocations of effort is relatively restricted. The current cod recovery plan makes allowance for vessels which can demonstrate a track record of having caught less than 1,5% cod to be excluded from the effort regime (Regulation 1342/2008, Article 11, para 2b). There is also scope for groups of vessels to be allocated additional effort if they participate in discard reduction or cod avoidance schemes leading to equivalent or greater reductions in cod mortality than the corresponding effort restriction (Regulation 1342/2008, Article 13, para 2c). These conditions are represented in the database as follows:

| Condition  | Code     |
|--|----------|
| Effort deployed by those boats granted the <1.5% derogation excluding them from the effort regime  | CPart11  |
| Effort deployed by vessels operating in Member State schemes under Article 13: highly selective gear with less than 1 % cod.               | CPart13A |
| Effort deployed by vessels operating in Member State schemes under Article 13: cod avoiding fishing trips with less than 5% cod.           | CPart13B |
| Effort deployed by vessels operating in Member State schemes under Article 13: cod avoidance or discard reduction plans.                   | CPart13C |
| Effort deployed by vessels operating in Member State schemes under Article 13: fisheries off West of Scotland to the west of the cod line. | CPart13D |

The new requested aggregation required data resubmission for the years 2009-2011 in addition to the data update for 2012 as defined in the 2013 DCF data call. The majority of the Member States aggregated their figures accordingly and thus the present report comprises updated analyses.

#### 4.1.3 *Southern hake and Nephrops*

Notation devised for effort categories specified under Annex IIB of Regulation (EC) No. 43/2012 remains the same as in previous reports. Under Annex IIB the gears group is defined under point 2 and special conditions under point 6.1. The group of gears includes bottom trawls, gill nets and bottom long lines all together. In 2007 (Annex IIB in R (EC) No. 41/07) there are separate groups for trawl (3a), for gill nets (3b) and for longline (3c). These gear groups were merged in the 2008 legislation. The working group considered maintaining the 3 separate categories is important in terms of maximising the clarity of information from results. Therefore, gear groups and codifications have been kept as in 2007. Table 4.1.3.1 links notation with gear group and special conditions. So, for example, a vessel using a gill net of mesh size  $\geq 60\text{mm}$  and conforming to the hake catch composition rules would belong to derogation “3.b IIB61”.

Table. 4.1.3.1 Gear group and special conditions of Annex IIB, Reg. (EC) No. 43/2012

| Gear group (Regulation (EC) 41/2007) |          |                      | Special condition        |  |          | Effort Regime Derogation |
|--------------------------------------|----------|----------------------|--------------------------|--|----------|--------------------------|
| Regulation point                     | Gear     | Mesh size range (mm) | (Regulation(EC) 43/2012) |  | EWG code |                          |
|                                      |          |                      | Regulation point         | Description  |          |                          |
| 3.a                                  | OTTER    | ≥ 32                 | 6.1                      | Hake landings <5 tonnes in 2009 or 2010<br><br>AND<br><i>Nephrops</i> landings <2.5 tonnes in 2009 or 2010 | IIB61    | Yes                      |
| 3.b                                  | GILL     | ≥ 60                 |                          |  |          |                          |
| 3.c                                  | LONGLINE | -                    |                          |  |          |                          |
| 3.a                                  | OTTER    | ≥ 32                 |                          | Other cases  | none     | No                       |
| 3.b                                  | GILL     | ≥ 60                 |                          |  |          |                          |
| 3.c                                  | LONGLINE | -                    |                          |  |          |                          |

OTTER = Trawl or Danish seine or “similar gears”

GILL = Gill net

LONGLINES = Bottom longlines

#### 4.1.4 Western Channel sole

Under Annex IIC gear groups are defined under point 3 and special conditions under point 7. Table 4.1.4.1 links notation with gear group and special conditions. So, for example, a vessel using a static net of mesh size less than 220mm belongs to derogation “3.b”.

Table. 4.1.4.1 Gear group and special conditions of Annex IIC, Reg. (EC) No. 40/2008. Note that no special conditions are currently in operation under Annex IIC.

| Derogation         |                           | Gear    | Mesh size range   |                 | Special Condition |
|--------------------|---------------------------|---------|-------------------|-----------------|-------------------|
| Gear group Point 3 | Special condition Point 7 |         | mesh size mm From | mesh size To mm |                   |
| 3.a                |                           | BT      | 80                | inf             | none              |
| 3.b                |                           | GE & TR | 0                 | 219             | none              |

BT = Beam Trawl

GE = Gill net or entangling net

TR = Trammel net

#### *4.1.5 Celtic Sea*

STECF EWG 13-06 defined the codes of gears as identical to the ones for the cod zones given in section 4.1.2.

#### *4.1.6 Bay of Biscay*

STECF EWG 13-06 defined the codes of major gear groups as identical in the 2013 DCF data call with an identification of the boats holding a special fishing permit as defined in R (EC) No 388/2006, encoded as SBcIIIart5.

#### *4.1.7 Western Waters and Deep Sea*

STECF EWG 13-06 defined the codes of major gear groups as identical in the 2013 DCF data call with an identification of the boats conducting deep sea trips, encoded as DEEP.

### **4.2 Data call**

The DCF data call 2013 to support fishing effort regime evaluations published on 20 February 2013 with a deadline on 3 May 2013. The data call is fully documented at the JRC DCF web page: <https://datacollection.jrc.ec.europa.eu/home>

The STECF EWG 13-06 notes that the 2013 data call is largely consistent with the data call issued in 2012 for the same purpose. However, there was one new parameter defined for fishing capacity in the Baltic Sea.

### **4.3 Data policy, formats and data availability**

Originally, the catch and effort data base structures used by STECF-SGRST were developed by the ICES Study Group on the Development of Fishery-based Forecasts (ICES CM 2004/ACFM:11, 41 pp.) with few amendments required for the review of specific fishery regulations. Over time, there have been numerous changes to the original database and the way in which data are stored and accessed in order to reflect changes to some of the effort regimes and to accommodate data from deep-water and Fully Documented Fisheries.

Experts reported on national data policies for the national fleet specific landings, discards and effort data and generally supported the continued use of the data by STECF but with required permission for any use by other scientific or non-scientific groups. This implies that national experts need to be contacted for their consent before granting access to the data.

JRC requests to be informed about applications for data access and any notifications.

#### 4.3.1 Data availability Table A Catch 2003-2012

Table 4.3.1.1 Overview of the catch data submission for the 2013 Fishing Effort Regimes data call. In bold the dates when catch data were submitted after the official submission deadline (3<sup>th</sup> of May).

| Country    | Data Submission                               | First Submission<br>(Deadline 3-May) | Last Re-submission<br>(Meeting 17-June to 21-June) |

##### 4.3.1.1 Belgium

A number of 2676 records were submitted for 2012. No update for previous year's data was needed. There were few records with missing mesh size information for gear types such as trammels, dredges and gillnets. Moreover, many records regard species that are not listed in the official data call, like BLL, RJN, RJM, RJC and RJH. The only special condition reported for 2012 data was SBCIIIart5. This year, all officially recorded species by the Belgian authorities were provided. However, it should be noted that the sum of all provided landings do not match the total Belgian landings as there are a minority of species landed and recorded as e.g. "other demersal" or "other crustacean" which are not provided to the EGW 13-06.

Belgium provided fleet specific landings data for 2003-2012 derived from official logbook databases for all vessels  $\geq 10$  meters. The data covers all areas in which the Belgian fleets are active and conform to the requested aggregation, by quarter, area, gear and mesh sizes.

The species provided are: anglerfish, bib, brill, brown shrimp, cod, conger eel, cuttlefish, dab, dogfish, edible crab, flounder, great scallop, grey gurnard, haddock, hake, horse mackerel, lemon sole, ling, mackerel, megrim, Nephrops, octopus, plaice, pollack, red gurnard, saithe, sea bass, skates and rays, sole, spurdog, squid, striped mullet, tub gurnard, turbot, whelk, whitch flounder, whiting and wolffish. The age composition on landings for sole and plaice in ICES subdivisions IV, VIIa, VIIId, VIIIfg and sole in subdivision VIIIa and b have been provided by quarter for the Belgian beam trawlers. The total numbers of samples, as well as numbers at aged by quarter have been apportioned in the same ratio as total quarterly beam trawl fleet landings to annual landings.

Discard data for 2004-2011 were provided from the Belgian Beam trawl fleet for the following species: anglerfish, brill, cod, dab, haddock, hake, lemon sole, plaice, saithe, sole, skates and rays, turbot and whiting. For 2012 discard information was also provided for bib, ling, Striped mullet, pollack and whitch flounder. The areas covered are 4, 7a, 7d, 7e, 7f, 7g, 8a and 8b. Belgian discard data represent all ages and are disaggregation by age for cod in areas 4, 7a, 7e, 7f and 7g; for sole in areas 4, 7a, 7d, 7f, 7g, 8a and 8b; and for plaice in areas 4, 7a, 7d, 7f and 7g. The discards information for the other species mentioned above are without disaggregation by age. Information by area for all observer-trips during the year has been merged together, giving an annual percentage of discards estimate per species. The annual estimates of discard rate have been assumed to apply in each of the 4 quarters.

There is no information on misreporting. The landings in the database are based on combined information of logbook data and sale slips. The actual landed weight is split according the logbook information on hours fished in the respective rectangles.

As Belgium does not have trip-by-trip information on the true mesh size for its fleets for 2003-2006, Belgium (as well as other countries) agreed to assume certain mesh sizes for its beam trawler fleets. Beamers operating in the Bay of Biscay (VIIIa,b) were assumed to use a 70-79 mm mesh size as this is the minimum legal mesh size in that area for beamers. For the North Sea, the trips were split according to the rectangles reported in the logbooks, and mesh sizes were allocated in line with Council Regulation (EC) N° 2056/2001. This regulation stipulates that beam trawlers are prohibited to use less than 120 mm in ICES Division IV to the north of 56° 00' N. Therefore all beam trawl information from this part of ICES Division IV was accounted against an assumed >120mm mesh size. The same regulation also stipulates that within the rectangle with coordinates along the east coast of the UK between 55° 00' N and 56° 00' N and the points 55° 00' N – 05° 00' E and 56° 00' N – 05° 00' E, beam trawlers can use 100 to 119 mm mesh size. Here also it was assumed that the mesh size used by the Belgian Beam trawl fleet was 100-119 mm. For the rest of ICES Division IV (the southern part) a mesh size of 80-89 mm was assumed for the beam trawlers. Apart from these assumed mesh size which are based on rectangle information from logbooks, it was also assumed that the shrimp fishery used a mesh size of 16-31 mm. The mesh size of the beam trawl fleets in the other area's was assumed to be 80-89 mm. Since 2007 mesh sizes used by beam trawls operating in different areas have been based on the true mesh sizes used on each trip.

The Belgian gear categories are: beam, dredge, gill, longline, otter, and trammel. For trammel nets, no assumptions of mesh sizes were made. The only specific condition reported for 2012 data was SBCIIIart5 for all Belgian vessels operating in areas 8a and 8b.

Belgium did not provide any information for vessels under 10m.

#### 4.3.1.2 Denmark

A number of 154019 records were submitted for 2003 - 2012, the whole time series. There were few records with missing gear information as well as few records for pots, dem\_seines, gills, otters without any mesh size reported. No BACOMA or T90 specific conditions.

Danish data were submitted on time, and with the requested information for all tables. However, a major revision was performed in 2012, and full time series were submitted for the tables A-D, thus ensuring improved consistency in the extraction methods used across years.

The revised extraction procedures have been made compatible with the RDB FishFrame database, in order to get a unique raising procedure for all Danish catch information (discards and age-based information), thus improving the consistency of data reported to the various forums within e.g. ICES and STECF. As such, data raised in FishFrame will now be used for the STECF Effort data call. Where the categories in the FishFrame format and the STECF Effort format are not the same, the data are scaled according to the landings.

All records (154019 rows in Table A) passed the Data Submission filters, and only a very small proportion of the reported Danish fisheries activities have missing information. The resubmission of older years means that the information on previous special conditions implemented between 2004 and 2008 during the first cod plan is not available anymore.

The Danish 2012 submission still does not cover the special conditions BACOMA or T90 in the Baltic, as these are not compulsory to report in logbooks according to control regulations 1224/2009 and 404/2011.

#### 4.3.1.3 Estonia

A number of 532 records were submitted for 2012. No updates for previous year's data. There were many records with inconsistent mesh size ranges.

STECF-EWG 13-06 notes that discards were provided for flounder only. The reason for that is the discarding ban in the Estonian fishery in the Baltic Sea according to MS legislation. The data set presented includes many inconsistent mesh sizes. The drifting long –lines are not used in Estonian fishery.

#### 4.3.1.4 Finland

A number of 385 records were submitted for 2012. No updates for previous year's data. Finish data were submitted in an inconsistent format together with a hint towards the data confidentiality clause in the DCF.

STECF EWG 13-06 could not make use of the Finish data given its specific ToR.

#### 4.3.1.5 France

A number of 20538 records were submitted for 2012. No updates for previous years data. There were few records with missing area information as well as records for pots without any mesh size reported. Only data regarding species and gears that are requested in the official data call have been submitted as a consequence records regarding species or gears not requested are missing.

The specific conditions Cpart11, Cpart13B, IIB72ab, DEEP and SBcIIIart5 have been provided for eligible vessels and fisheries for 2012. The data were not updated for the 2009-2011 on this specific issue.

France provided landings data for 2003-2012 derived from official logbook databases for all registered vessels 10m and over and from monthly declarative forms (contain declarative monthly data on fishing effort and catches per species by dates, locations and gears) for all registered vessels under 10m (logbooks are not mandatory for these vessels but they are covered by these monthly declarative forms). The data covers all areas requested in the data call and conforms to the requested aggregation, by quarter, area, gear and mesh sizes.

Neither biological data (age data) nor discards data were provided. Discards data have been provided the years before for 2010 and 2011 but care is required in the use of these data to draw firm conclusions about catch composition.

#### 4.3.1.6 Germany

A number of 16377 records were submitted for 2004 and 2009 - 2012 time periods. There were few records with missing gear information as well as few records for pots, dem\_seines, gills, otters without any mesh size reported.

Fleet specific landings and estimated discard data were provided as outlined in the data call for 2003-2012 derived from official logbook data covering all vessels  $\geq 10$ m. For the Baltic information for vessels  $\geq 8$ m is provided. Information on landings are provided for vessels  $< 10$ m (North Sea) and  $< 8$ m (Baltic) based on landings declarations from these vessels in a more aggregated format as logbooks are not mandatory for these vessels. All data provided do not include unallocated landings. The estimation of discards is based on about 20-30 observer trips per year. It is impossible to cover all quarter-gear-mesh size combinations in the data call. Therefore, final discard estimates in this report are to some extent based on observations from other countries. The data consider the aggregation by quarter, area, gear, mesh size, and existing derogations including special conditions of 8.1.a, 8.1.c, 8.1.d, 8.1.e and 8.1.f for the years 2003-2008 as requested. For 2009 onwards the special conditions from the new cod management plan are used. Some few records did not pass the Data Submission filters when some information on e.g. gear, mesh size was missing, but these records represent only a very small proportion of the reported German fisheries activities. They are related to fishing operations with seldom gears for which no code is available in the STECF data call.

#### 4.3.1.7 Ireland

A number of 73788 records were submitted for 2009 - 2012. There were few records with missing gear information as well as few records for pots, gills, otters without any mesh size reported.

In 2013 Ireland provided fleet specific landings data for 2009-2012 derived from declared landings within the national logbook database (IFIS) for all vessels  $\geq 10$  meters in length. Operational landings information was used to provide landings data within the Biologically Sensitive Area (BSA). All species requested by the group and landed by Irish vessels have been provided in the requested aggregation. The following special condition information was supplied: none, CPart13a, CPart13b, CPart13c, CPart13d, CPart11 and DEEP. SPECON DEEP is a duplication of effort within the relevant areas. This submission adds to unchanged 2003-2008 data submitted in 2012.

Under 10 meter vessels are not required to complete logbooks, therefore landings data from these vessels are obtained from monthly reports. These reports provide species live weight by ICES area on a monthly basis. No vessel, gear, or effort information is recorded. There is some doubt as to the accuracy of these monthly reports.

It was not possible to accurately aggregate data to the level of EU, coast, and RFMO. Data was assigned according to the following: Where an EU category existed within an area, all data from that area was categorised as EU, with the exception of ICES division X assumed to be RFMO. Those ICES divisions without an EU category were assumed as 1 coast and 2 coast.

There is no quantitative information on misreporting although area misreporting for cod is known to be an issue between VIIg and VIIa.

Minor revisions were made to the 2009-2011 data due to continuing revisions and improvements to the national database.

Irish biological landings information is not recorded with mesh size information, this was re-constructed by linking to the logbooks database, where possible. The age composition of the landings was estimated for each quarter of 2009-2012, by gear, area and species (any higher level of disaggregation would violate the sampling design). The age compositions were then assigned to each of the remaining categories (vessel\_length; mesh, fishery; specon) based on the reported landings in each of these categories.

Similarly, discard data were raised up to the fleet level for each year, quarter, gear, area and species. Fishing effort (hours fished) was used for all species as the auxiliary variable. The age compositions were then assigned to each of the remaining categories (vessel\_length; mesh, fishery; specon) based on the effort (kWdays) in each of these categories. Discards that were observed to be zero are included.

#### Warnings:

- 1) Differences between ICES stock assessment working group data and STECF data will arise because different levels of stratification were used; we applied the most disaggregated level of stratification possible for the STECF data call, while working group estimates are generally produced by merging a number of strata. Additionally, the discard estimates for the working groups are produced using different auxiliary variables for certain stocks. Because of the large number of species involved it was decided to use a single auxiliary variable for all species.
- 2) Because the data are estimated by year, quarter, gear and area, it is meaningless to compare age compositions between vessel length categories, mesh size categories and special conditions; the age composition will be identical for all of these sub-categories)
- 3) Most categories (year, quarter, vessel length, gear, mesh etc) have not been sampled and sample numbers are very low for categories that have been sampled. Therefore the biological data should be treated with extreme caution. It would be more useful to ask for the raw data so this can be aggregated at whatever level is appropriate.
- 4) There will be many cases where a year-quarter-area-gear-vessel length-mesh-fishery-specon combination has not been sampled but there will be biological information (including 'observed' zero values for discards). This is because the biological information is estimated for year-quarter-area-gear combinations and then assigned to the various year-quarter-area-gear-vessel length-mesh-fishery-specon combinations based on landings or effort.

It is possible for numbers-at-age to be <0.001 thousand (i.e. less than one fish). This can arise when a certain year-quarter-area-gear-vessel length-mesh-fishery-specon combination has a very small amount of effort or landings. The numbers-at-age estimated for the year-quarter-area-gear combination will then be multiplied by a very small number. When these numbers are rounded to three decimals, a zero value can result.

#### 4.3.1.8 Latvia

A number of 147 records were submitted for 2012. No updates for previous year's data.

Latvian data were submitted on time and in accordance with required format. Fleet specific landings, estimated discards and biological data were provided for 2012 only and appended to the previous time series. All data concerning fishing operations e.g. gear, mesh size, area etc. were derived from logbooks and covered all fleet segments.

Discards data were collected under the Latvian National Programme according the sampling strategy. The discard volume was determined in cod fishery: GNS\_DEF\_110-156\_0\_0 and OTB\_DEF\_>=105\_1\_110. The sampling scheme does not cover all quarter-gear-mesh size combinations in the data call.

Latvian fishermen do not traditionally use drifting lines (LLD).

#### 4.3.1.9 Lithuania

A number of 141 records were submitted for 2012. No updates for previous year's data.

STECF EWG 13-06 notes that discards for cod were estimated and provided only.

Lithuanian fishermen do not traditionally use drifting lines (LLD).

#### 4.3.1.10 The Netherlands

The Netherlands provided landings and discard data for 2012. No updates for previous years were submitted. It is noted however that landings and discards data for all species and fisheries of previous years is being reanalyzed. Results so far indicate that there may be differences between the data generated by the Dutch monitoring and raising programme and the data that is contained in the STECF database. If the analysis is being completed in time, it will be considered to resubmit the complete time series before the October 2013 meeting of the STECF EWG.

After correction of some records all records (1788 rows in Table A) passed the Data Submission filters.

#### 4.3.1.11 Poland

A number of 1592 records were submitted for 2012. No updates for previous year's data. No mesh size range information reported for vessels under 10 meters. No specific condition reported. Few records for vessels > 10m with no mesh size range information mainly for pots and gills. Only 18 records with discard information for COD, FLX, TUR, PLE and FPP.

The following section is kept unchanged from last year report: Comparison of 2011 mesh size data with 2004-2010 shows that they are not consistent and significantly different. Neither mesh size nor SPECON (BACOMA window, T90) information were available from the database for 2004-2010. Thus these information were estimated based on expert knowledge and assumptions. Targeted species assemblages (métier), actually fish species caught and gear used were taken into account to identify mesh size. In 2011 data about mesh size were calculated based on actual information derived from

logbooks, this caused that many “-1” values (missing values) which were reported for 2001-2010, become known and changed into “16-31” or “32-54” in 2011. Information on discards was provided for cod (2003-2011) taken in fisheries targeting cod and discards for herring, sprat and flounder was delivered for 2011 only.

#### 4.3.1.12 Portugal

Portugal resubmitted data on landings for the period 2003-2011 and new data for 2012 for all species, correcting to tons what was provided in 2012 in kilograms. Data from all years were resubmitted in kilograms and not in tons as requested in the data call. No differences were found between the resubmitted data in 2012 and the data submitted in 2011.

Some mistakes related to the presence of duplicated lines for the area 9b EU with aggregated data were detected and corrected. The duplicates were allocated to the area 9b RFMO, according to the ID field. The fields "NO\_SAMPLES\_LANDINGS" or "NO\_LENGTH\_MEASUREMENTS\_LANDINGS" presenting the value “-2” resulting from lines aggregation were corrected to “-1”, meaning that the information is not available. Although most of inconsistencies from previous years in the combination of GEAR\*SPECON have been corrected in the data submitted this year, there are still a few mistakes remaining as, e.g. for gears “PEL\_TRAWL”, “PEL\_SEINE” and “POTS” with special condition “DEEP”.

In the period 2004-2010, hake discards were provided, assuming that they were proportional to the trawl landings. However, considering that, according to the Data Collection Framework raising procedures, discards are raised using effort and not landings and that the data call grouping is not consistent with the sampled DCF métiers, in 2012 hake discards from Portugal were removed from the database.

The Portuguese annual discard estimates have high coefficients of variation (> 30%). The assignment of these data to the data call disaggregated métiers when the métiers do not perfectly match is not possible without making strong assumptions different from those used in the established raising procedures and that could lead to completely different total discard estimates.

Therefore, in 2012, data on hake annual discards by DCF métiers were provided and included in tables and figures in aggregated form.

At present, the procedure used to raise discards from haul to fleet level in the Portuguese trawl fisheries is adapted from Fernandes et al. (2010) (Jardim and Fernandes, in prep.). Using this procedure, species with low frequency of occurrence or abundance in discards (i.e., a large number of zeros in the data set) cannot be reliably estimated at fleet level (Jardim et al., 2011). The frequency of occurrence and abundance of most species in the discards of the Portuguese bottom trawl fleet was below 30%. Consequently, annual trawl discard volumes and length frequencies at fleet level were only estimated for some métiers, species and years.

In what concerns gillnets and trammel nets, sampled from late 2009 onwards, the sampling methodologies used in these fisheries were only recently standardized (Prista and Jardim, 2011). These are only two of the several métiers that can be performed by the so-called Portuguese polyvalent fleet (or multi-gear fleet). Besides nets, the vessels in this fleet are also frequently licensed to use pots and bottom longlines, and frequently carry out several métiers in a single fishing trip and/or switch métiers during the year. Such uncertainties in determining fishing effort at métier level, along with low spatial-temporal coverage of fleet activity and difficulties in raising data from multi-métier fishing trips to fleet level have hampered the estimation of gillnet and trammel net discards. No estimates at fleet level have been performed to date. Bottom longlines are not among the selected métiers for onboard sampling under the DCF National program.

In 2013, discard estimates are presented only for bottom otter trawl. The problem of different metier aggregation in DCF and in the data call request is not yet solved and the total discards by species were allocated to the data call more disaggregated metiers proportionally to their landings, although this procedure is considered inappropriate. In this way, discards are presented for hake and blue whiting for the period 2004-2012 and for some years for Norway lobster and mackerel. Zero discards have been reported for black scabbard fish, sole, sea breams, several species of sharks and *Nephrops* in most of the years,

No discard estimates were presented for other metiers than trawl due to the reasons presented above.

Age data: There is a serious concern about European hake growth. Tagging experiences show that growth rate could be two times higher than expected, although the true value is uncertain (ICES, 2009). At present, the assessment model is length based (ICES, 2010a).

No age data were provided for hake neither for the other main species. For Norway lobster, there is not a standardized ageing methodology.

#### 4.3.1.13 Spain

##### Data provided in 2013:

Between May and June of 2013 Spain provided catch data from 2012 by quarter, vessel length range, gear, mesh size range and metier (fishery). Landings were provided for BSA; ICES Subareas 1, 2, 8, 10 and 12; ICES Divisions 5b, 6a, 6b, 7a, 7b, 7c, 7d, 7e, 7f, 7g, 7h, 7j, 7k, 8a, 8b, 8c, 8d, 8e, 9a, 9b and 14b and CECAF Divisions 34.1.1, 34.1.2, 34.1.3 and 34.2.0. Landings were divided by COAST/EU/RFMO zones where appropriate. All landings were split in special condition DEEP and NONE (according to the Effort Regime in Deep Sea fisheries). In ICES Divisions 8c and 9a there were not special condition (IIB72ab) landings (Hake Plan) because no vessel in 2012 has applied for that condition in relation to hake and *Nephrops* recovery plan (Annex IIB of R(EU) No 43/2012). Landings were not divided in either Cod or Sole Plan special conditions owing to lack of time. Landings were provided for 83 of the 122 species of the 2013 data call (the other 39 do not appear in our fisheries). No information about vessels under 10 meters was provided since data source was logbooks, but 2012 Annex IIB (Hake Recovery Plan in 8c & 9a), which is the main Plan for Spain, does not deal with vessels under 10 meters.

Discard data were calculated through the appropriated Spanish discard/landing rate for 8c & 9a gear otter for the following species and years: ANF (2012), HKE (2012), JAX (2012), LEZ (2012), MAC (2007 & 2012), NEP (2004-2005 & 2012), SHO (2005), WHB (2004-2009, 2012). If there were not landings of one species, discard could not have been calculated. This is expected to be corrected in the future raising by effort. 8c & 9a otter Spanish HKE discards from 2004-2009 have been already provided to the group in 2010 (see below). For other cases (ALF 2012, ANE 2007-2009, BLI 2012, BSF 2006-2007, COP 2012, COE 2012, CRE 2012, DCA 2009, DGS 2012, GAG 2012, HAL 2012, LEM 2012, LIN 2012, MAC 2003-2006 & 2008-2009, NEP 2006-2009, POK 2012, POL 2012, RNG 2012, SBR 2004-2009 & 2012, SCE 2012, SOL 2005-2009 & 2012, TUR 2012, WHG 2007 & 2012 and WIT 2012) Portuguese discard rates were applied in order to calculate the Spanish discards in 9a against the criterion of the 8c & 9a experts in the EWG. In all those cases Portuguese discard rates were zero except in MAC 2005 and HAD, LEM, RNG, WHG and WIT 2012.

No of samples of landings, discards and catch and No of length and age measurements of landings, discards and catch were not provided for 2012 due to the lack of time.

Hake and monkfish ages were not provided since there are relevant doubts in the correspondent international working groups about the ageing of these species (see February 2010 STECF Hake

Benchmark and 2011-2013 ICES WGHMM reports). Nephrops ages were not provided because there is not a standardized methodology ageing in this species. Other species age information was not provided because lack of time.

#### Data provided in 2011 and 2012:

Spain did not provide data in 2011 and 2012; therefore, there are not 2010 and 2011 data.

#### Data provided in 2010:

All the following comments correspond to the data provided in 2010:

2002-2009 landings and 2003-2009 discards data were provided by quarter, gear, mesh size range and area. 2002-2009 8c and 9a data were provided by special condition according to Annex IIB, also special condition DEEP landings according to the Effort Regime in Deep Sea fisheries were provided for these two Divisions. For the rest of the areas only 2009 special condition DEEP landings according to the Effort Regime in Deep Sea fisheries were provided. Special condition NONE landings according to the Effort Regime in Deep Sea fisheries for 2009 were not provided by misunderstanding of the instructions.

Vessel length categories were not identified for 2002-2008 8c and 9a data. It was not possible to identify EU/RFMO/COST for ICES Subarea 10 and Divisions 7j, 7k, 8d, 8e, 8b, 14b and CECAF areas 34.1.2 and 34.2.0.

All 2003-2009 discards data were deleted because they were unreasonable values. This occurred because the discard data were specifically raised following the numerous strata of the EWG Data call (quarter and ICES Division). DCR (EU Data Collection Regulation) sampling scheme is simpler (by year and for both ICES Divisions 8c and 9a together); therefore there were very few observed trips by quarter and division and the bias of the final values was huge. After that, 2002-2009 8c and 9a otter hake discards were calculated using the respective 2010 ICES WGHMM discard rates converted in discard/landings rates.

There were not hake, *Nephrops* and monkfish ages since nowadays there are relevant doubts in the specific international working groups about hake and monkfish ageing (see February 2010 STECF Hake Benchmark and 2011 ICES WGHMM) and there is not a standardized methodology for *Nephrops* ageing.

No information about vessels under 10 meters was provided since data source was logbooks, but Annex IIB does not deal with vessels under 10 meters.

#### 4.3.1.14 Sweden

A number of 10652 records were submitted for 2011 - 2012 time period. There were few records with missing gear information as well as few records for pots, dem\_seines and gills without any mesh size reported.

Sweden has provided catch data, both landings and discards in the required format for the years 2003-2012, including vessels <10m LOA. Age distribution data were submitted for cod landings and discards in the Baltic, Skagerrak and Kattegat and for plaice discards in Skagerrak and Kattegat. Landings in tonnes were retrieved from logbooks and the age distribution data for landings were collected by market sampling. The discard data were collected under the Swedish on board discard sampling programme. Discard data were raised according to the national sampling schemes, stratified by nationally identified fisheries and not by the highly disaggregated vessel length classes and mesh

size groups in the STECF data call, to maintain as much stability as possible in the raising procedure and not compromise the quality of the data by extrapolations from very few samples. Discards were then allocated to the more disaggregated format proportionally to the landings of the target species used in the raising. This has the implication that it is not always possible to compare discard rates or age distributions between gears and mesh sizes in the format of the STECF data base since they could have been estimated from the same samples. Vessel length classes were not considered in the stratification and raising. No discards have been submitted for fisheries not covered by the sampling programme. The main nationally identified Swedish fisheries that were sampled for discards (each one treated as one stratum) in 2012 were:

In the Baltic:

- Trawls targeting cod (Mesh size  $\geq 105$ mm, including mid water trawls targeting cod and both trawls with BACOMA exit window and T90 mesh)
- Passive gears (including both gillnets and trammel nets)

In Skagerrak and Kattegat (Skagerrak and Kattegat being treated as separate strata):

- Trawls targeting demersal fish/Nephrops, with a mesh size of  $\geq 90$ mm.(including both TR2 and TR1)
- Trawls targeting Nephrops, with a 35mm sorting grid and a mesh size of 70-89mm (under derogation CPart11 in the cod plan)
- Demersal Pandalus trawls without a sorting grid (Mesh size 32-54mm)
- Demersal Pandalus trawls with a 19mm sorting grid (Mesh size 32-54mm)

Landings of cod have been prohibited in Sweden during parts of 2003, 2004, 2005, 2006 and 2012 which has resulted in discard of adult cod. Gillnets were not sampled in Skagerrak or Kattegat, meaning that discards for those gears have been extrapolated in the STECF data base from Danish discard data.

Drifting longlines, targeting salmon, were included in the “Longline” category in the data set.

Since hand and pole lines are under effort regulation in the cod plan in the Baltic Sea but not in Skagerrak or Kattegat, and the “Longline” category is considered a regulated gear in the STECF data base, those gears were included in the “Longline” category in the Baltic and not in other areas.

There is no information on misreporting.

#### 4.3.1.15 United Kingdom

England, Wales and Northern Ireland: Data were submitted covering the period 2009-2012, with 2009-2011 revised to include splitting the CPart13 landings, discards and biological data into the separate components of CPart13a, CPart13b, CPart13c and CPart13d. Where samples were available (covering 2011 and 2012), Fully Documented Fishery vessels were treated separately for discard and biological raising for the species under full documentation (i.e. cod in the North Sea, sole in the western channel), while discards and biological data raising for other species was kept consistent with non-FDF vessels. For 2011 and 2012 data years, AFBNI provided new data on discard estimates and biological sampling, replacing the previously submitted data. As in previous years, there were a number of records with missing mesh size information and a combination of DEEP specific conditions and BSA area which were ignored during the analysis. Specific conditions reported were DEEP, CPart11, CPart13a,b,c, FDFIIA and FDFIIC.

Voyage information on the non-Scottish UK national data base, FAD, calculates days at sea based on the dates of the voyage start and the voyage end. Voyage information on the Scottish national data base, FIN, calculates days at sea as the number of 24 hour periods in the duration of the voyage, rounded up. Vessels landing into Scotland are entered onto FIN; those landing into the rest of the UK are entered into FAD. Scottish vessels landing outwith the UK are entered into FIN; Rest UK vessels landing outwith the UK are entered into FAD. Because most voyages by Rest UK vessels are entered into FAD; the calculation of days at sea is generally date based. Days at sea for voyages leaving on the same date as the return of the previous voyage are adjusted down by half a day applied to each voyage involved.

Nominal effort in kwdays is calculated as days at sea multiplied by the power of the vessel in kilowatts at the voyage landing date.

GT\_days\_at\_sea is calculated for years from 2003 as the days at sea multiplied by the Gross Tonnage of the vessel at the voyage landing date.

The information is not available on a comparable basis before 2003 because this was before the completion of the EU wide vessel gross tonnage recalibration exercise. Activity and gear is assessed daily; where activity in a single day covers more than one area (ICES Rectangle level) or more than one gear; that day's effort is apportioned equally between the area/gears recorded

Vessels <10m: No specific consideration is given to estimating discards for vessels < 10m and discard sampling staff tend not to sail on vessels in the 10 metre and under category. In 2003 the Scottish Fisheries Statistics showed landings of the main commercial demersal species from vessels <=10 m to be below the level where sampling intensities as defined in Appendix XV (Section H) of regulation (EC) 1639/2001 (Table 2) requires sampling to be carried out. Estimation of demersal discards for vessels <10m is based on the assumption that all vessels targeting Nephrops and operating in the same sampling area have the same catching and discarding characteristics.

Scotland:

#### 4.3.2 Data availability Table B nominal fishing effort 2000-2012

Table 4.3.2.1 Overview of the effort data submission for the 2013 Fishing Effort Regimes data call. In bold the dates when effort data were submitted after the official submission deadline (3<sup>th</sup> of May).

##### 4.3.2.1 Belgium

Data submitted for 2012 compose of 164 records in total. No update for previous year's data was needed. There were few records submitted with no mesh size information for trammels, gillnet and dredges. The only specific condition reported for 2012 data was SBCIIIart5.

Belgium did not provide any information for vessels under 10m.

Belgium provided effort data (kw\*days at sea) for 2003-2012 by quarter, for all relevant areas where the Belgian fleets are operational. Since 2003 effort (and landings) are split proportionally over the rectangles as effort became available by rectangle from logbook data. As Belgium does not have trip-by-trip information on the true mesh size for its fleets for 2003-2006, Belgium (as well as other countries) agreed to assume certain mesh sizes for its beam trawler fleets. Beamers operating in area VIIIa,b were assumed to use a 70-79 mm mesh size as this is the minimum legal mesh size in that area for beamers. For the North Sea, the trips were split according to the rectangles reported in the logbooks, and mesh sizes were allocated in line with Council Regulation (EC) N° 2056/2001. This regulation stipulates that beam trawlers are prohibited to use less than 120 mm in ICES Division IV to the north of 56° 00' N. Therefore all beam trawl information from this part of ICES Division IV was

accounted against an assumed >120mm mesh size. The same regulation also stipulates that within the rectangle with coordinates along the east coast of the UK between 55° 00' N and 56° 00' N and the points 55° 00' N – 05° 00' E and 56° 00' N – 05° 00' E, beam trawlers can use 100 to 119 mm mesh size. Here also it was assumed that the mesh size used by the Belgian Beam trawl fleet was 100-119 mm. For the rest of ICES Division IV (the southern part) a mesh size of 80-89 mm was assumed for the beam trawlers. Apart from these assumed mesh size which are based on rectangle information from logbooks, it was also assumed that the shrimp fishery used a mesh size of 16-31 mm. The mesh size of the beam trawl fleets in the other area's was assumed to be 80-89 mm. Since 2007 mesh sizes used by beam trawls operating in different areas have been based on the true mesh sizes used on each trip.

Trip information on the national data base calculates days at sea based on the voyage start date and the voyage end date. For example, a voyage starting on one date and returning (landing) the following day will be accounted for 2 days at sea. Each day a vessel is at sea is counted only once with the effort details allocated according to the longest voyage on that date. Nominal effort in kwdays is calculated as days at sea multiplied by the power of the vessel in kilowatts at the trip landing date. Activity and gear is assessed daily; where activity in a single day covers more than one area or more than one gear; that day's effort is allocated completely to the area/gear with the longest activity that day. Based on the detailed information given it remains unclear to the STECF EWG 13-06 if the data are consistent with Control or DCF Regulation.

The Belgian gear categories are: beam, dredge, gill, longline, otter, and trammel. For trammel nets, no assumptions of mesh sizes were made. The only specific condition reported for 2012 data was SBCIIIart5 for all Belgian vessels operating in areas 8a and 8b.

#### 4.3.2.2 Denmark

##### 4.3.2.2.1 Description of Danish procedures

Data submitted for 2000 - 2012, the whole time series, compose of 27537 records in total. There were few records with missing gear information as well as few records for pots, dem\_seines, gills, otters without any mesh size reported. No BACOMA or T90 specific conditions.

Danish data were submitted on time, and with the requested information for all tables. However, a major revision was performed in 2012, and full time series were submitted for the tables A-D, thus ensuring improved consistency in the extraction methods used across years.

Major changes have been brought to the effort data. Until 2012 the effort data (Table B) were calculated and provided by the Danish AgriFish Agency, using the logbook register and the sales slips register separately. The other datasets were provided by DTU Aqua using the DFAD database, which is a coupling of the logbook register, the sales slips register and the vessel register based on a logbook sheet number. Maintaining two different systems increases the risk of errors. Running two different types of data sources also increases the risk of discrepancies between the resulting datasets, as the extraction procedures used slightly different algorithms. Some examples are given below:

- **SMALL VESSELS** : In the previous procedure, logbook data were used systematically for vessels larger than 8 meters in the Baltic Sea, and larger than 10m for other areas, and sale slips were used systematically for smaller vessels, and one trip (landing date) counted as one day. In the revised 2013 procedure, the merged logbook - sales slips database shows that some large vessels may have some sale slips but no logbooks, or that some small vessels actually fill in logbooks and have a gear. That means that some trips that had gear=-1 in the old method will have a gear assigned in the 2013 method. There is therefore more accuracy in

using the combined database throughout, and the “none” gear category has globally diminished.

- AREA : In the previous procedure area for the effort data set was set to the logbook area when the logbook was used (the larger vessels) and to sales slips area when the sales slips data were used (the smaller vessels). In the 2013 procedure, there are still some cases where the logbook area differs from the sales slips area, or where the Baltic subdivision is missing. Therefore a standard procedure for area assignment has been implemented for setting the “DFAD area”, following the rules:
  1. If there is a logbook area this is used
  2. If the trip does not have a logbook the sales slips area is used
  3. In the Baltic Sea if the square is 39G4 and the logbook area is 3D and the sales slip area contains information about the subdivision (3D24 or 3D25), the sales slips area is used.
  4. If the area is 3D, the ICES rectangle information is used to assign the subdivision.
  5. If the area is still 3D (no ICES rectangle information is available), the sales slips area is used.
  6. If the area is still 3D the area of the previous trip with the same vessel within 3D with a subdivision assigned, this subdivision is used.
  7. If the area is still 3D the most used subdivision for that vessel is used.
  8. If the area is still 3D the most used subdivision during the year is used.

The last steps are mainly used on old data.

- SPECON :
  - DEEP: The deep-water fishery is defined as option (2) *catch of Deep Sea species retained > 100 kg*. For the effort data this has been calculated from the logbook catch registration, which is the weight estimated by the fisherman. In DFAD the weights from the sales slips are used. When the weights of deep water species are close to 100 kg, the difference in the weight estimated and measured might lead to a difference in which trips goes into the DEEP specific condition.
  - FDFBAL : In the Baltic Sea the fishermen are not obliged to keep the camera turned on. The fully documented fishery by the Danish AgriFish Agency is only implemented in the North Sea and Skagerrak.

Additionally, the various issues mentioned in last year’s report have been corrected.

All records (27537 rows in Table B) passed the Data Submission filters, and only a very small proportion of the reported Danish fisheries activities have missing information. The resubmission of older years means that the information on previous special conditions implemented between 2004 and 2008 during the first cod plan is not available anymore.

The Danish 2012 submission still does not cover the special conditions BACOMA or T90 in the Baltic, as these are not compulsory to report in logbooks according to control regulations 1224/2009 and 404/2011.

#### 4.3.2.2.2 *Concerns about the data call*

On May 2<sup>nd</sup>, the Danish AgriFish Agency wrote to the EC about a number of concerns regarding the data call. These concerns are reported below :

*“In relation to upload of the Danish figures, the AgriFish Agency is of the opinion that it is necessary to provide The Commission with comments to the methodology for compiling the figures in order to have transparency in the process and ensure proper use and interpretation of the data. Further it is also necessary to address a few remarks to the annexes of the data call in order to ensure a common understanding.*

*Our comments below refer to point B and D and corresponding appendixes regarding effort data for 2000-2012 (point B and D) :*

- 1) With regard to point 6 GEAR (B). In Council Regulation 1342/2008, annex 1, the different gear segments are defined by stating the statistical code for the gear(s) in parenthesis. However, the gear coding in appendix 3 of the data call is not consistent with the gear coding of Council Regulation 1342/2008. This is the case for GILL and LONGLINE. GILL includes codes GNS and GND, however none of the two statistical codes are mentioned in 1342/2008 which only mentions GN which is a general code for Gill Nets. This causes confusion when compiling data. With regard to LONGLINE only LL is mentioned in Regulation 1342/2008 but LONGLINE includes poles (LHP), drifting lines (LLD) etc. Again this causes confusion in establishing a link to existing administrative procedures.*
- 2) Further point 6 GEAR (B) and 4 GEAR (D) : In Council Regulation 1098/2007 there are no specific gear codes mentioned, but in Council Regulation 1124/2010 (Tac and Quota Regulation for the Baltic 2011), Annex 2, there are mentioned a wide range of gears, although not with a statistical code, which all has to have a mesh size of 90 mm or above. In Annex 2, it is stated that drifting lines (LLD) should not be included and there is no references to drift nets. This causes confusion when compiling the data and establishing link to existing administrative procedures.*

*As stated above in point 1) and 2) there is lack of consistency between the gears applied in the administrative legislation and the gears applied in the data call. Analysis and conclusions based on this data call must bear these inconsistencies in mind.*

The gears applied by Denmark in this data call is:

|   |                                       |
|---|---------------------------------------|
| <i>POINT B</i>                              | <i>POINT D (REGGEAR &gt;= 90 mm)</i>  |
| <i>BEAM : TBB</i>                           | <i>BEAM : Not included</i>            |
| <i>OTTER : OTB, TB, PTB, OTT, TBN, TBS</i>  | <i>OTTER : OTB, TB, PTB, OTT, TBN</i> |
| <i>DEM_SEINE : SDN, SSC, SB</i>             | <i>DEM_SEINE : SDN, SSC, SB</i>       |
| <i>PEL_TRAWL : OTM, TM, PTM</i>             | <i>PEL_TRAWL : OTM, TM, PTM</i>       |
| <i>PEL_SEINE: PS, PSN</i>                   | <i>PEL_SEINE: PS, PSN</i>             |
| <i>DREDGE : DRB</i>                         | <i>DREDGE : Not included</i>          |
| <i>LONGLINE : LL, LX, LH, LLS, LLD, LHP</i> | <i>LONGLINE : LL, LX, LLS</i>         |
| <i>GILL : GN, GNS, GND</i>                  | <i>GILL : GN, GNS, GND</i>            |
| <i>TRAMMEL : GTR</i>                        | <i>TRAMMEL : GTR</i>                  |
| <i>POTS : FYK, FPN, FPO, FIX</i>            | <i>POTS : Not included</i>            |

- 3) *With regard to point 9 AREA (B) and 5 AREA (D) Denmark will like to stress that the data quality on IBSFC areas in 3C24 and 3D24 is not as good as for the remaining areas when it comes to registrations for square 39G4 which is in both areas. The quality of the data has improved in recent years, but still there may be inconsistencies.*
  
- 4) *Point 10 (B) SPECON: There is no information in the logbook with regard to whether a vessel has applied BACOMA or T90 and the vessel is not obliged to fill in this information in the logbook. Consequently Denmark has no information with regard to Baltic Technical Conditions. Further Denmark has only applied article 13C in Regulation 1342/2008 and no data is reported for Cod Plan R(EC) No 43/2009. Deep-water species is defined in line with Regulation 2347/2002 which states fishing trips >= 100 kg mix of species mentioned in the regulation. Fully documented fisheries are defined by the vessels participating and the date of entering the scheme.*
  
- 5) *Point 11 FISHING\_ACTIVITY (B): Denmark submitted data previous years based on the definition in the data call which was calendar days at sea. This is also the case this year although it is not the definition applied for administrating the rules in regulation 1342/2008 and regulation 1098/2007. However the baseline was calculated with this definition and the Commission was informed of the inconsistency between the definition in the data call and the definition applied by the Danish Administration and as such the time series of the data call will not be broken. In general applying calendar days combined with gear codes defined in the data call results in approximately 5-10 percent higher fishing activity and even more in one or two segments.*

*Denmark believes that there should be transparency in the process of how data are compiled in Member States and the mentioned points above are not a methodology report, but points which help researchers understand what data can be used for when conducting analysis. Therefore Denmark suggests that all Member States submits a methodology report on how data are compiled (data sources, definitions, sampling methods applied etc.) and the reports are distributed to every country. This procedure is well known for Member States submitting fishery statistics to Eurostat according to Regulations administered by Eurostat.”*

#### 4.3.2.3 Estonia

A number of 58 records were submitted for 2012. No updates for previous year's data.

The effort (days at sea) was calculated according to the Control Regulation. STECF EWG 13-06 noted that the data provided are only for vessels  $\geq 12$ m.

#### 4.3.2.4 Finland

A number of 73 records were submitted for 2012. No updates for previous year's data.

Finish data were submitted in an inconsistent format together with a hint towards the data confidentiality clause in the DCF. STECF EWG 13-06 could not make use of the Finish data given its specific ToR.

#### 4.3.2.5 France

A total number of 3079 records were submitted only for 2012. No updates for previous years data. There were 15 records with missing area information. Some inconsistent “gear\*mesh size\*area\*specon” combination were observed, it concern the combination “pots\*mesh size:-1” and combinations with missing area information. No fishing capacity data before 2012. Only data regarding gears that are requested in the official data call have been submitted as a consequence records regarding gears not requested are missing.

The specific conditions Cpart11, Cpart13B, IIB72ab, DEEP and SBcIIIart5 have been provided for eligible vessels and fisheries for 2012. The data were not updated for the 2009-2011 on this specific issue.

Fishing activity data have been provided only for the period 2010 – 2012 (no fishing activity data for 2003 – 2009). Fishing capacity data were provided for the first time for 2012 in kW. No fishing capacity data are available for the other years. It should be noted that this field is asked as kW or GT depending of the area, would be much easier to fill it if it was duplicated in kW and GT.

France provided effort data for 2003-2012 derived from official logbook databases for all registered vessels 10m and over and from monthly declarative forms (contain declarative monthly data on fishing effort and catches per species by dates, locations and gears) for all registered vessels under 10m (logbooks are not mandatory for these vessels but they are covered by these monthly declarative forms). The data covers all areas requested in the data call and conforms to the requested aggregation, by quarter, area, gear and mesh sizes. Days at sea are estimated with consistency with the DCF regulation (any continuous period of 24 hours (or part thereof) during which a vessel is present within an area and absent from port).

#### 4.3.2.6 Germany

Data submitted for 2009 - 2012 compose of 2234 records in total. There were very few records with missing gear information as well as records for pots without any mesh size reported.

Germany provided fleet specific effort data for 2000-2012 in the requested formats derived from official logbook data. However, data on vessels <10m in the North Sea and <8m in the Baltic do not cover all vessels and trips because these vessels normally do not have to fill out logbooks. For the scientific evaluations in this report, the calculation procedure follows closely the description in the STECF technical report "Some technical guidance towards national fleet specific fishing effort and catch data aggregation" (ISBN 978-92-79-12134-0). This implies a calculation of kw-days based on calendar days and effort related to rescue operations etc. are not subtracted. Based on the detailed information given it remains unclear to the STECF EWG 13-06 if the data are consistent with Control or DCF Regulation. The data consider the aggregation by quarter, area, gear, mesh size, and existing derogations including special conditions of 8.1.a, 8.1.c, 8.1.d, 8.1.e and 8.1.f for the years 2000-2008. For 2009 onwards the special conditions from the new cod management plan are used. Some few records did not pass the Data Submission filters when some information on e.g. gear, mesh size was missing, but these records represent only a very small proportion of the reported German fisheries activities. They are related to fishing operations with seldom gears for which no code is available in the STECF data call.

For the Baltic Sea, drifting lines LLD are included in regulated LONGLINE category.

#### 4.3.2.7 Ireland

Data submitted for 2009 - 2012 compose of 2961 records in total. There were few records with missing gear information as well as few records for pots, gills, dredges and otters without any mesh size reported.

Ireland provided fleet specific kW\*days-at-sea, GT\*days-at-sea, kw capacity, and vessel numbers for 2009-2012 in the requested aggregation format, derived from the national logbook database (IFIS) for vessels  $\geq 10$  meters in length. The following special condition information was supplied: none, CPart13a, CPart13b, CPart13c, CPart13d, CPart11 and DEEP. Specon DEEP is a duplication of effort within the relevant areas. Days-at-sea data were constructed following the methodology guidelines provided by the Joint Research Council at a meeting held by the Commission in February 2009 and according to the Control Regulation. Only one gear and area combination is applied to any one vessel day assigned according to the dominant fishing activity. Data from 2000-2008 from 2012 submission were retained in 2013. Revisions to earlier data are due to ongoing revisions and improvements within the national database.

Fishing activity was not provided as Ireland does not operate within the areas for which this data was requested.

Mesh size information was only available from 2003 onwards.

Days-at-sea effort for 2000-2002 is presented as a calculated proxy, obtained from the average ratio of operational fishing days to days-at-sea by gear during 2003 to 2005.

Vessels less than 10m in length are not required to complete logbooks, and therefore no effort is available for these vessels.

It was not possible to accurately aggregate data to the level of EU, coast, and RFMO. Data was assigned according to the following: Where an EU category existed within an area, all data from that

area was categorised as EU, with the exception of ICES division X assumed to be RFMO. Those ICES divisions without an EU category were assumed as 1 coast and 2 coast.

#### 4.3.2.8 Latvia

A number of 71 records were submitted for 2012. No updates for previous year's data.

Latvian data were submitted on time and in accordance with required format. Fleet specific effort data by quarter, gear, mesh size and area were provided for 2012 only and appended to the previous time series. All requested effort data, such as days at sea, kW\*Days and Gt\*Days completely covered all fleet segments for 2008-2012, and only offshore fishery for the period 2003-2007. It was impossible to estimate accurately effort data in kW\*days and Gt\*days for the boats less than 10 m operated in coastal zone for years till 2008, because fishermen in that period filled logbooks without data about boats. That is the main reason for incomplete information concerning small scale fishery segment for the period of 2005-2007. However, "days at sea" were fully presented for this period.

Fishing activity (days at sea) were calculated on the base of voyage start date and the voyage end date, by subtraction returning date from departure date. In case when a voyage started and ended in the same date it was adopted as 1 day at sea. If the vessels during the trip operated in more than one area each day was attributed to the area where the most fishing time was spent. Based on the detailed information given it remains unclear to the STECF EWG 13-06 if the data are consistent with Control or DCF Regulation.

All effort data were based on the information derived from logbook.

#### 4.3.2.9 Lithuania

A number of 86 records were submitted for 2012. No updates for previous year's data.

Days at sea were measured according Control Regulation.

#### 4.3.2.10 The Netherlands

The Netherlands provided effort data for 2012. No updates for previous years were submitted. The data was provided in the requested format using the official logbook data for vessels < 10 m, >= 10 <=15 m and >15 m.

All records (363 rows in Table B) passed the Data Submission filters.

Effort calculation is assumed to be based on days absent from port. As the national database contains not only departure date and arrival date but also the time of departure and the time of arrival, the absence can be calculated more precisely than just days. At the October meeting this information will be made final, based on information of the Ministry of Economic Affairs.

#### 4.3.2.11 Poland

A number of 1448 records were submitted for 2011-2012. No mesh size range information reported for vessels under 10 meters. No specific condition reported.

STECF EWG 13-06 notes that a different method of estimation of mesh size ranges in 2011 (compared to the previous years) caused inconsistent mesh size classes, which used to be “110-156” in 2004-2010 period. This mostly concerns vessels under 10 meters. Other variables seem to be very consistent across years.

#### 4.3.2.12 Portugal

Portugal provided kW\*days, GT\*days and number of vessels for 2000-2012 in the requested aggregation format, derived from the national logbook database for vessels  $\geq 10$  meters in length. Data are provided by quarter, vessel length, gear, mesh size range, area and special condition.

No data on allowed activity were provided.

Data on fishing activity and fishing capacity were provided for vessels  $\geq 10$  meters operating with regulated gears and with specon=NONE (under effort restrictions).

Vessels  $< 10$  meters are not required to complete logbooks. Effort of these vessels was estimated based on sales records and data are not available for all fields of the data call.

Some mistakes related to the presence of duplicated lines for the area 9b EU with aggregated data were detected and corrected. The duplicates were allocated to the area 9b RFMO, according to the ID field. The fields "FISHING\_ACTIVITY" or " FISHING\_CAPACITY" presenting the value “-2” resulting from lines aggregation were corrected to “-1”, meaning that the information is not available. Although most of inconsistencies from previous years in the combination of GEAR\*SPECON have been corrected in the data submitted this year, there are still a few mistakes remaining as, e.g. for gears “PEL\_TRAWL”, “PEL\_SEINE” and “POTS” with special condition “DEEP”.

#### 4.3.2.13 Spain

##### Data provided in 2013:

Between May and June of 2013 Spain provided nominal fishing effort data from 2012 by quarter, vessel length range, gear, mesh size range and metier (fishery). Data were provided for BSA; ICES Subareas 1, 2, 8, 10 and 12; ICES Divisions 5b, 6a, 6b, 7a, 7b, 7c, 7d, 7e, 7f, 7g, 7h, 7j, 7k, 8a, 8b, 8c, 8d, 8e, 9a, 9b and 14b and CECAF Divisions 34.1.1, 34.1.2, 34.1.3 and 34.2.0. Data were divided by COAST/EU/RFMO zones where appropriate. Data were split in special condition DEEP and NONE (according to the Effort Regime in Deep Sea fisheries). In ICES Divisions 8c and 9a there were not special condition (IIB72ab) data (Hake Plan) because no vessel in 2012 has applied for that condition in relation to hake and *Nephrops* recovery plan (Annex IIB of R(EU) No 43/2012). Data were not divided in either Cod or Sole Plan special conditions owing to lack of time. Spain provided fishing activity, fishing capacity, nominal effort, GT days at sea and number of vessels, as de 2013 Data Call requested.

No information about vessels under 10 meters was provided since data source was logbooks, but 2012 Annex IIB (Hake Recovery Plan in 8c & 9a), which is the main Plan for Spain, does not deal with vessels under 10 meters.

#### Data provided in 2011 and 2012:

Spain did not provide data in 2011 and 2012; therefore, there are not 2010 and 2011 data.

#### Data provided in 2010:

All the following comments correspond to the data provided in 2010:

Spain provided nominal fishing effort data from 2002-2009 data. 2000 and 2001 data were not provided because of the low quality of logbooks those years. Data were provided by quarter, vessel length range, gear and mesh size range. Data were provided for 8c and 9a from 2002-2009 divided by special condition IIB72AB and NONE according to the Southern Hake Plan and also special condition DEEP data (according to the Effort Regime in Deep Sea fisheries) were added. For 2009, also DEEP data of ICES Subarea 12 and ICES Divisions 6a, 7b, 7c, 7h, 8a, 8b, 8c, 9a and 14a were provided. Special condition NONE landings according to the Effort Regime in Deep Sea fisheries for 2009 were not provided by misunderstanding of the instructions. Data were divided by COAST/EU/RFMO zones. Spain provided fishing activity, nominal effort, GT days at sea and number of vessels.

No information about vessels under 10 meters was provided since data source was logbooks, but Annex IIB (Hake Recovery Plan in 8c & 9a), which is the main Plan for Spain, does not deal with vessels under 10 meters.

#### 4.3.2.14 Sweden

A number of 1083 records were submitted for 2012. There were few records with missing gear information as well as few records for pots, dredges, dem\_seines and gills without any mesh size reported.

Sweden has previously provided all required effort data in the requested format from 2000-2012, apart from capacity data, which was provided for the years 2003-2012 for the Baltic Sea and from 2009-2012 for all other areas. Days at sea were calculated according to the DCF definition, i.e. continuous 24-hours periods absent from port. Nominal effort data for vessels <10m LOA were included but is not considered reliable until 2009.

For the Baltic Sea, drifting lines LLD are included in regulated LONGLINE category.

#### 4.3.2.15 United Kingdom

England, Wales and Northern Ireland: A fully revised time series (2003-2012) was provided this year, which resulted in minor changes to earlier years (2003-2008) and included the separation of special condition CPart13 into its components a,b,c,d. A number of records were submitted with missing mesh sizes for pots and dredges where mesh size was not applicable. Some records with both area BSA and special condition DEEP were submitted and ignored in the analysis. Special conditions reported were DEEP, CPart11, CPart13a,b,c,d, FDFIIA and FDFIIC.

Scotland: A number of 10596 records were submitted for 2000-2012 time period, the full time series. There were few records with missing gear and/or area and/or mesh size information.

New data was submitted for 2012 and a revision submitted for 2000-2011 to accommodate the new 'fishing-capacity' field for all the fleets for vessels 10m and over and for vessels under 10 meters.

Scotland supplies data where records present no gear type information and/or no mesh size information for the purpose of data completeness. As in previous years there were records for area BSA and specific condition DEEP which were ignored in the analysis. Specific conditions reported were DEEP, FDFIIA, CPart11 and CPart13. Any effort in the Cod Recovery Zone for TR1 and TR2 gears was assigned to special condition CPart13A, CPart13B, CPart13C, CPart13D .

Vessels <10m: For vessels <10m effort is considered under reported 2000-2005 because of under reporting of POTS and shell fishing by hand. The <10m effort data for Scottish registered vessels 2000-2008 excludes voyages landing into ports in England and other non-Scottish areas of the UK. Scottish under 10m boats are known to use more than one type of gear on individual trips or within a quarter and multiple counting of boats is therefore significant.

Vessels landing into Scotland are entered into the Scottish database where the calculation of days at sea is based on the number of 24 hour periods, rounded up. Scottish vessels landing into the rest of the UK are entered into the UK (non-Scottish) database which calculates days at sea based on the dates of the voyage start and the voyage end. Days at sea for voyages leaving on the same date as the return of the previous voyage are adjusted down by half a day. Based on the detailed information given it remains unclear to the STECF EWG 13-06 if the data are consistent with Control or DCF Regulation.

### 4.3.3 Data availability Table C spatial fishing effort 2003-2013

Table 4.3.3.1 Overview of the spatial effort data submission for the 2013 Fishing Effort Regimes data call. In bold the dates when spatial effort data were submitted after the official submission deadline (4<sup>th</sup> of May).

| Country | Data Submission | First Submission<br>(Deadline 3-May) | Last Re-submission<br>(Meeting 17-June to 21-June) |
|---------|-----------------|--------------------------------------|--|
| BEL     | DCF website     | 18-April                             |  |

#### 4.3.3.1 Belgium

Data submitted only for 2012. No updates for previous years' data were needed. In total, 614 records were submitted. There were few records with missing mesh size information for gears such as trammels, gillnets and dredges.

Belgium did not provide any information for vessels under 10m.

Belgium provided effective effort by ICES statistical rectangle in units of hours trawled for the period 2003-2012, derived from the official logbook databases for all vessels  $\geq 10$  meters. The data covers all areas in which the Belgian fleets are active and conform to the requested aggregation, by quarter, area, gear and mesh sizes. No spatial effort information is available for vessels less than 10m in length.

Trawled hours were calculated by summing fishing time to the aggregation level requested in the data call. To ensure consistency between datasets, the same base operational logbooks data was used as for the aggregation of days-at-sea effort.

As Belgium does not have trip-by-trip information on the true mesh size for its fleets for 2003-2006, Belgium (as well as other countries) agreed to assume certain mesh sizes for its beam trawler fleets. Beamers operating in the Bay of Biscay (VIIIa,b) were assumed to use a 70-79 mm mesh size as this is the minimum legal mesh size in that area for beamers. For the North Sea, the trips were split according to the rectangles reported in the logbooks, and mesh sizes were allocated in line with Council Regulation (EC) N° 2056/2001. This regulation stipulates that beam trawlers are prohibited to use less than 120 mm in ICES Division IV to the north of 56° 00' N. Therefore all beam trawl information from this part of ICES Division IV was accounted against an assumed >120mm mesh size. The same regulation also stipulates that within the rectangle with coordinates along the east coast of the UK between 55° 00' N and 56° 00' N and the points 55° 00' N – 05° 00' E and 56° 00' N – 05° 00' E, beam trawlers can use 100 to 119 mm mesh size. Here also it was assumed that the mesh size used by the Belgian Beam trawl fleet was 100-119 mm. For the rest of ICES Division IV (the southern part) a mesh size of 80-89 mm was assumed for the beam trawlers. Apart from these assumed mesh size which are based on rectangle information from logbooks, it was also assumed that the shrimp fishery used a mesh size of 16-31 mm. The mesh size of the beam trawl fleets in the other area's was assumed to be 80-89 mm. Since 2007 mesh sizes used by beam trawls operating in different areas have been based on the true mesh sizes used on each trip.

The Belgian gear categories are: beam, dredge, gill, longline, otter, and trammel. For trammel nets, no assumptions of mesh sizes were made. The only specific condition reported for 2012 data was SBCIIIart5 for all Belgian vessels operating in areas 8a and 8b.

#### 4.3.3.2 Denmark

Data submitted for 2003 - 2012, the whole time series, compose of 62078 records in total. There were few records with missing gear information as well as few records for pots, dem\_seines, gills, otters without any mesh size reported. No BACOMA or T90 specific conditions.

Danish data were submitted on time, and with the requested information for all tables. However, a major revision was performed in 2012, and full time series were submitted for the tables A-D, thus ensuring improved consistency in the extraction methods used across years.

All records (62078 rows in Table C) passed the Data Submission filters, and only a very small proportion of the reported Danish fisheries activities have missing information. The resubmission of older years means that the information on previous special conditions implemented between 2004 and 2008 during the first cod plan is not available anymore.

The Danish 2012 submission still does not cover the special conditions BACOMA or T90 in the Baltic, as these are not compulsory to report in logbooks according to control regulations 1224/2009 and 404/2011.

More details on the Danish data are given under section effort data table B, and these are also valid for Table C.

#### 4.3.3.3 Estonia

A number of 288 records were submitted for 2012. No updates for previous year's data. There were many records with inconsistent mesh size ranges.

STECF EWG 13-06 noted that data were provided only for vessels  $\geq 12$ m.

#### 4.3.3.4 Finland

A number of 73 records were submitted for 2012. No updates for previous year's data.

Finish data were submitted in an inconsistent format together with a hint towards the data confidentiality clause in the DCF. STECF EWG 13-06 could not make use of the Finish data given its specific ToR.

#### 4.3.3.5 France

A total number of 11599 records were submitted only for 2012. No updates for previous years data. There were few records with missing area information as well as records with missing statistical rectangle information (data is available for the ICES division but not at this level of aggregation). Some inconsistent "gear\*mesh size\*area\*specon" combination were observed, it concern the combination "pots\*mesh size:-1" and combinations with missing area information. Only data regarding gears that are requested in the official data call have been submitted as a consequence records regarding gears not requested are missing.

The specific conditions Cpart11, Cpart13B, IIB72ab, DEEP and SBcIIIart5 have been provided for eligible vessels and fisheries for 2012. The data were not updated for the 2009-2011 on this specific issue.

France provided specific effort data by rectangle for 2003-2012 derived from official logbook databases for all registered vessels 10m and over and from monthly declarative forms (contain declarative monthly data on fishing effort and catches per species by dates, locations and gears) for all registered vessels under 10m (logbooks are not mandatory for these vessels but they are covered by these monthly declarative forms). The data covers all areas requested in the data call and conforms to the requested aggregation, by quarter, area, gear and mesh sizes.

#### 4.3.3.6 Germany

Data submitted for 2012 composes of 2174 records in total. There were very few records with missing gear information as well as records for pots without any mesh size reported.

Data for vessels <10m in the North Sea and 8m in the Baltic could not be submitted as these vessels do not have to fill out logbooks. Some few records did not pass the Data Submission filters when some information on e.g. gear, mesh size was missing, but these records represent only a very small proportion of the reported German fisheries activities. They are related to fishing operations with seldom gears for which no code is available in the STECF data call.

#### 4.3.3.7 Ireland

Ireland provided effective effort by ICES statistical rectangle in units of hours fished for the period 2009-2012 in the requested aggregation format, derived from the national logbook database (IFIS) for vessels  $\geq 10$ m in length. In total 12544 records were submitted with few records without a gear information and few without mesh size for pots, gills, dredges and otters. Hours fished were calculated by summing fishing time reported within the logbook operations. To ensure consistency between datasets, the same base operational logbooks data was used as for the aggregation of days-at-sea effort. The following special condition information was supplied: none, CPart13a, CPart13b,

CPart13c, CPart13d, CPart11 and DEEP. Specon DEEP is a duplication of effort within the relevant areas. Data from 2000-2008 from 2012 submission were retained in 2013. Revisions to earlier data are due to ongoing revisions and improvements within the national database.

No spatial effort information is available for vessels less than 10m in length.

It was not possible to accurately aggregate data to the level of EU, coast, and RFMO. Data was assigned according to the following: Where an EU category existed within an area, all data from that area was categorised as EU, with the exception of ICES division X assumed to be RFMO. Those ICES divisions without an EU category were assumed as 1 coast and 2 coast.

#### 4.3.3.8 Latvia

A number of 198 records were submitted for 2012. No updates for previous year's data.

Latvian data were submitted on time and in accordance with required format. Fleet specific effort data Hours fished by ICES statistical rectangles were provided for 2012 only and appended to the previous time series. Effective effort (Hours fished) was calculated by summing fishing duration for each operation during the trip. For the small boats less than 10 m this parameter was calculated as fishing days multiplied by 24. Effort data were derived from logbooks and covered all fleet segments for the period of 2005-2012. Fleet specific effort data for small boats (<8m) were not provided for 2003 – 2004.

#### 4.3.3.9 Lithuania

A number of 134 records were submitted for 2012. No updates for previous year's data.

No comments.

#### 4.3.3.10 The Netherlands

The Netherlands only provided effort by rectangle data for 2012. No updates for previous years were submitted. The data was provided in the requested format using the official logbook data for vessels < 10 m, >= 10 <=15 m and >15 m.

Not all records (1975 rows in Table C) passed the Data Submission filters due to the fact that rectangles are only defined for ICES areas and not for CECAF areas. Despite this, all records were submitted.

#### 4.3.3.11 Poland

A number of 3095 records were submitted for 2011-2012. No mesh size range information reported for vessels under 10 meters. No specific condition reported.

STECF EWG 13-06 notes that relative changes of the total effective effort seem to be consistent across the years. Mesh size data breakdown for 2011 is not comparable with previous years because of different aggregation method used (as described above).

#### 4.3.3.12 Portugal

Portugal provided effective effort (in hours) by rectangle for the period 2003-2012 for vessels  $\geq 10$  meters with the aggregation requested by the data call, based on logbook data. Data for the ICES areas 6b, 7k, 8c, 8d, 8e, 9a, 9b, 10, 12 and 14, as well as for the CECAF areas were provided. Around 10% of records, identified as having wrong ICES rectangle codes, with 3 characters instead of 4, were corrected (e.g. "4C1" corrected to "04C1"). Although not identified as errors, all lower case codes were changed to upper case, to be used by case sensitive programs.

No spatial effort information is available for vessels  $< 10$  meters, since they are not required to complete logbooks.

#### 4.3.3.13 Spain

##### Data provided in 2013:

Between May and June of 2013 Spain provided spatial fishing effort data from 2012 by quarter, vessel length range, gear, mesh size range and metier (fishery). Data were provided for BSA; ICES Subareas 1, 2, 5, 6, 8, 9, 10, 12 and 14; ICES Divisions 3b3, 3c, 3d, 7a, 7b, 7c, 7d, 7e, 7f, 7g, 7h, 7j, 7k, 8a, 8b, 8c, 8d, 8e and 9a and CECAF Divisions 34.1.1, 34.1.2, 34.1.3 and 34.2.0. Data were divided by COAST/EU/RFMO zones where appropriate. Data were split in special condition DEEP and NONE (according to the Effort Regime in Deep Sea fisheries). In ICES Divisions 8c and 9a there were not special condition (IIB72ab) data (Hake Plan) because no vessel in 2012 has applied for that condition in relation to hake and *Nephrops* recovery plan (Annex IIB of R(EU) No 43/2012). Data were not divided in either Cod or Sole Plan special conditions owing to lack of time.

No information about vessels under 10 meters was provided since data source was logbooks, but 2012 Annex IIB (Hake Recovery Plan in 8c & 9a), which is the main Plan for Spain, does not deal with vessels under 10 meters.

##### Data provided in 2011 and 2012:

Spain did not provide data in 2011 and 2012; therefore, there are not 2010 and 2011 data.

##### Data provided in 2010:

All the following comments correspond to the data provided in 2010:

Spain provided spatial fishing effort data for 2002 to 2009. Data were provided by quarter, vessel length range (only in 2009), gear and mesh size range. Data were provided for 8c and 9a from 2002-2009 divided by special condition IIB72AB and NONE according to the Southern Hake Plan and also special condition DEEP data (according to the Effort Regime in Deep Sea fisheries) were added. For 2009, also DEEP data of ICES Subarea 12 and ICES Divisions 6a, 7b, 7c, 7h, 8a, 8b, 8c and 9a were provided. Special condition NONE landings according to the Effort Regime in Deep Sea fisheries for 2009 were not provided by misunderstanding of the instructions. Data were divided by COAST/EU/RFMO zones.

No information about vessels under 10 meters was provided since data source was logbooks, but Annex IIB (Hake Recovery Plan in 8c & 9a), which is the main Plan for Spain, does not deal with vessels under 10 meters.

#### 4.3.3.14 Sweden

A number of 2180 records were submitted for 2012. There were few records with missing gear information as well as few records for pots and otters without any mesh size reported.

Specific effort data by rectangle has been submitted in the required format for the years 2003-2012, including vessels <10m LOA. Hours fished were derived from fishing time reported by fishing activity in the logbooks.

#### 4.3.3.15 United Kingdom

A fully revised time series (2003-2012) was provided this year, which resulted in minor changes to earlier years (2003-2008) and included the separation of special condition CPart13 into its components a,b,c,d. A number of records were submitted with missing mesh sizes for pots and dredges where mesh size was not applicable. Some records with both area BSA and special condition DEEP were submitted and ignored in the analysis. Special conditions reported were DEEP, CPart11, CPart13a,b,c,d, FDFIIA and FDFIIC.

Where activity in a single day covers more than one area (ICES Rectangle level) or more than one gear; that day's effort is apportioned equally between the area/gears recorded. The hours fished entries are simply days at sea data multiplied by 24. This is because hours fished information obtained from vessels has been proven unreliable (not a required field in logbooks).

Scotland: A number of 23566 records were submitted for 2009-2012 time period. There were few records with missing gear and/or area and/or mesh size information.

New data was submitted for 2012 and revised data submitted for 2009-2011 to accommodate the split in specific condition CPart13 for all the fleets for vessels 10m and over and for vessels under 10 meters.

Effort on voyages fishing in more than one rectangle is allocated according to logbook data. The hours fished entries are simply days at sea data multiplied by 24. This is because hours fished information has been proven unreliable from Scottish vessels (not a required field in logbooks).

Scotland supplies data where records present no gear type information and/or no mesh size information for the purpose of data completeness. As in previous years there were records for area BSA and specific condition DEEP which were ignored in the analysis. Specific conditions reported were DEEP, FDFIIA, CPart11 and CPart13A, CPart13B, CPart13C, CPart13D.

#### 4.3.4 Data availability Table D fishing Capacity in the Baltic Sea 2003-2012

Table 4.3.4.1 Overview of the capacity data submission for the 2013 Fishing Effort Regimes data call. In bold the dates when capacity data were submitted after the official submission deadline (4<sup>th</sup> of May).

| SWE | DCF website | 1-May        | <b>14-June</b> |

#### 4.3.4.1 Denmark

Data submitted for 2003 - 2012, the whole time series, compose of 296 records in total.

Danish data were submitted on time, and with the requested information for all tables. However, a major revision was performed in 2012, and full time series were submitted for the tables A-D, thus ensuring improved consistency in the extraction methods used across years.

All records (296 rows in Table D) passed the Data Submission filters. The resubmission of older years means that the information on previous special conditions implemented between 2004 and 2008 during the first cod plan is not available anymore.

The Danish 2012 submission still does not cover the special conditions BACOMA or T90 in the Baltic, as these are not compulsory to report in logbooks according to control regulations 1224/2009 and 404/2011.

More details on the Danish data are given under section effort data table B, and these are also valid for Table D.

#### 4.3.4.2 Estonia

In total 28 records were submitted for 2008 - 2012.

STECF EWG 13-06 notes that data for vessels <12 m was not provided.

#### 4.3.4.3 Finland

One record was submitted for 2012 with an inconsistent aggregation level for vessel length over 10 meters. There is no fishing activity available for 2008-2011.

Finish data were submitted in an inconsistent format together with a hint towards the data confidentiality clause in the DCF. STECF EWG 13-06 could not make use of the Finish data given its specific ToR.

#### 4.3.4.4 Germany

Data submitted for 2003 - 2012, the whole time series, compose of 148 records in total.

Data on Capacity and Fishing Activity in the Baltic was provided as requested by the data call from logbook information. It was ensured that vessels do not count twice to get a realistic overview on fleet capacity. The full time series is covered.

#### 4.3.4.5 Latvia

Data submitted for 2003 - 2012, the whole time series, compose of 81 records in total.

Latvian data were submitted on time and in accordance with required format. Fishing fleet capacity data were provided for time series 2003-2012 for active vessels operated in the Baltic Sea. Data for boats less than 8 m were provided from 2008 and afterward.

#### 4.3.4.6 Lithuania

Data submitted for 2009 - 2012 compose of 32 records in total.

No comments.

#### 4.3.4.7 Poland

Data submitted for 2004 - 2012 compose of 286 records in total.

STECF 12-12 notes that relative data provisions and estimated changes between years look reliable and consistent.

#### 4.3.4.8 Sweden

Data submitted for 2003 - 2012, the whole time series, compose of 222 records in total.

Fisheries capacity data of active vessels in the Baltic Sea has been submitted in the required format for the years 2003-2012, including vessels <8m LOA. Days at sea were calculated according to the DCF definition, i.e. continuous 24-hours periods absent from port.

#### 4.3.5 Data availability Table E spatial landings 2003-2012

Table 4.3.5.1 Overview of the spatial landings data submission for the 2013 Fishing Effort Regimes data call. In bold the dates when spatial landings data were submitted after the official submission deadline (3<sup>th</sup> of May).

| Country | Data Submission | First Submission<br>(Deadline 3-May) | Last Submission<br>(Meeting 17-June to 21-June) |

#### 4.3.5.1 Belgium

A total number of 7905 records were submitted for 2012. No update for previous year's data was needed. There were few records with missing mesh size information for gear types such as trammels, dredges and gillnets. Moreover, many records regard species that are not listed in the official data call, like BLL, RJN, RJM, RJC and RJH. The only special condition reported for 2012 data was SBCIIIart5. This year, all officially recorded species by the Belgian authorities were provided. However, it should be noted that the sum of all provided landings do not match the total Belgian

landings as there are a minority of species landed and recorded as e.g. “other demersal” or “other crustacean” which are not provided to the EGW 13-06.

Belgium provided fleet specific landings data for 2003-2012 derived from official logbook databases for all vessels  $\geq 10$  meters. The data covers all areas in which the Belgian fleets are active and conform to the requested aggregation, by quarter, area, gear and mesh sizes.

The species provided are: anglerfish, bib, brill, brown shrimp, cod, conger eel, cuttlefish, dab, dogfish, edible crab, flounder, great scallop, grey gurnard, haddock, hake, horse mackerel, lemon sole, ling, mackerel, megrim, Nephrops, octopus, plaice, pollack, red gurnard, saithe, sea bass, skates and rays, sole, spurdog, squid, striped mullet, tub gurnard, turbot, whelk, whitch flounder, whiting and wolffish.

As Belgium does not have trip-by-trip information on the true mesh size for its fleets for 2003-2006, Belgium (as well as other countries) agreed to assume certain mesh sizes for its beam trawler fleets. Beamers operating in the Bay of Biscay (VIIIa,b) were assumed to use a 70-79 mm mesh size as this is the minimum legal mesh size in that area for beamers. For the North Sea, the trips were split according to the rectangles reported in the logbooks, and mesh sizes were allocated in line with Council Regulation (EC) N° 2056/2001. This regulation stipulates that beam trawlers are prohibited to use less than 120 mm in ICES Division IV to the north of 56° 00' N. Therefore all beam trawl information from this part of ICES Division IV was accounted against an assumed >120mm mesh size. The same regulation also stipulates that within the rectangle with coordinates along the east coast of the UK between 55° 00' N and 56° 00' N and the points 55° 00' N – 05° 00' E and 56° 00' N – 05° 00' E, beam trawlers can use 100 to 119 mm mesh size. Here also it was assumed that the mesh size used by the Belgian Beam trawl fleet was 100-119 mm. For the rest of ICES Division IV (the southern part) a mesh size of 80-89 mm was assumed for the beam trawlers. Apart from these assumed mesh size which are based on rectangle information from logbooks, it was also assumed that the shrimp fishery used a mesh size of 16-31 mm. The mesh size of the beam trawl fleets in the other area's was assumed to be 80-89 mm. Since 2007 mesh sizes used by beam trawls operating in different areas have been based on the true mesh sizes used on each trip.

The Belgian gear categories are: beam, dredge, gill, longline, otter, and trammel. For trammel nets, no assumptions of mesh sizes were made. The only specific condition reported for 2012 data was SBCIIIart5 for all Belgian vessels operating in areas 8a and 8b.

Belgium did not provide any information for vessels under 10m.

#### 4.3.5.2 Denmark

A number of 405759 records were submitted for 2003 - 2012, the whole time series. There were few records with missing gear information, rectangle information as well as few records for pots, dem\_seines, gills, otters without any mesh size reported. No BACOMA or T90 specific conditions.

Danish data were submitted on time, and with the requested information for all tables. However, a major revision was performed in 2012, and full time series were submitted for the tables A-D, thus ensuring improved consistency in the extraction methods used across years.

The revised extraction procedures have been made compatible with the RDB FishFrame database, in order to get a unique raising procedure for all Danish catch information (discards and age-based information), thus improving the consistency of data reported to the various forums within e.g. ICES and STECF. As such, data raised in FishFrame will now be used for the STECF Effort data call. Where the categories in the FishFrame format and the STECF Effort format are not the same, the data are scaled according to the landings.

All records (405759 rows in Table E) passed the Data Submission filters, and only a very small proportion of the reported Danish fisheries activities have missing information. The resubmission of older years means that the information on previous special conditions implemented between 2004 and 2008 during the first cod plan is not available anymore.

The Danish 2012 submission still does not cover the special conditions BACOMA or T90 in the Baltic, as these are not compulsory to report in logbooks according to control regulations 1224/2009 and 404/2011.

More details on the Danish data are given under section effort data.

#### 4.3.5.3 Estonia

A number of 1488 records were submitted for 2012. No updates for previous year's data. There were many records with inconsistent mesh size ranges.

STECF EWG 13-06 notes that the mesh sizes are inconsistent with the data call for vessels <12 m.

#### 4.3.5.4 Finland

A number of 1654 records were submitted for 2012. No updates for previous year's data. Finish data were submitted in an inconsistent format together with a hint towards the data confidentiality clause in the DCF.

STECF EWG 13-06 could not make use of the Finish data given its specific ToR.

#### 4.3.5.5 France

A total number of 62573 records were submitted only for 2012. No updates for previous year's data. Landings data by rectangle have been only submitted since last year and are available only for 2011 and 2012. No landings data by rectangle is available for 2003-2010. There were few records with missing area information and records with missing statistical rectangle information (data is available for the ICES division but not at this level of aggregation). Some inconsistent "gear\*mesh size\*area\*specon" combination were observed, it concern the combination "pots\*mesh size:-1" and combinations with missing area information. Only data regarding gears that are requested in the official data call have been submitted as a consequence records regarding gears not requested are missing.

The specific conditions Cpart11, Cpart13B, IIB72ab, DEEP and SBcIIIart5 have been provided for eligible vessels and fisheries for 2012. The data were not updated for the 2009-2011 on this specific issue.

France provided landings data by rectangle for 2011-2012 derived from official logbook databases for all registered vessels 10m and over and from monthly declarative forms (contain declarative monthly data on fishing effort and catches per species by dates, locations and gears) for all registered vessels under 10m (logbooks are not mandatory for these vessels but they are covered by these monthly declarative forms). The data covers all areas requested in the data call and conforms to the requested aggregation, by quarter, area, gear and mesh sizes.

#### 4.3.5.6 Germany

A number of 9393 records were submitted for 2012. There were few records with missing gear information as well as few records for pots, dem\_seines, gills, otters without any mesh size reported.

Germany aggregated the landings from logbook information as requested by ICES statistical rectangles and covers the full time series. No complete data on the spatial distribution of landings could be provided for vessels <10m in the North Sea and <8m in the Baltic as these vessels are not mandatory to provide detailed logbook information. Description on special conditions from part A and B also apply to part E. Some few records did not pass the Data Submission filters when some information on e.g. gear, mesh size was missing, but these records represent only a very small proportion of the reported German fisheries activities. They are related to fishing operations with seldom gears for which no code is available in the STECF data call.

#### 4.3.5.7 Ireland

A number of 88629 records were submitted for 2009 - 2012. There were few records with missing gear information as well as few records for pots, dredges, gills without any mesh size reported.

Ireland provided landings by ICES statistical rectangle for the period 2008-2012 in the requested aggregation format, derived from the national logbook database (IFIS) for vessels  $\geq 10\text{m}$  in length. In total 88629 records were submitted with few records without a gear information and few without mesh size for pots, gills, dredges and otters. Landings were calculated by summing live weights reported within the logbook operations as declared landings are not available at the level of statistical rectangle. To ensure consistency between datasets, the same base operational logbooks data was used as for the aggregation of declared landings within the Landings database (A). The following special condition information was supplied: none, CPart13a, CPart13b, CPart13c, CPart13d, CPart11 and DEEP. Specon DEEP is a duplication of effort within the relevant areas. Data from 2003-2008 from 2012 submission were retained in 2013. Revisions to earlier data are due to ongoing revisions and improvements within the national database.

No spatial landings information is available for vessels less than 10m in length.

It was not possible to accurately aggregate data to the level of EU, coast, and RFMO. Data was assigned according to the following: Where an EU category existed within an area, all data from that area was categorised as EU, with the exception of ICES division X assumed to be RFMO. Those ICES divisions without an EU category were assumed as 1 coast and 2 coast.

#### 4.3.5.8 Latvia

A number of 352 records were submitted for 2012. No updates for previous year's data.

Latvian data were submitted on time and in accordance with required format. Fleet specific landings data by ICES statistical rectangle were provided for 2012 only and appended to the previous time series.

#### 4.3.5.9 Lithuania

A number of 242 records were submitted for 2012. No updates for previous year's data.

No comments.

#### 4.3.5.10 The Netherlands

The Netherlands only provided landings by rectangle data for 2012. No updates for previous years were submitted. The data was provided in the requested format using the official logbook data for vessels < 10 m, >= 10 <=15 m and >15 m.

All records (8266 rows in Table E) passed the Data Submission filters.

After submission it appears that specon FDFIA was assigned to fishing activities in the area BSA, the biologically sensitive area, which appears inconsistent with the fishing regulation and the data call. After consultation of the ministry these rows are removed from the Dutch table E.

#### 4.3.5.11 Poland

A number of 3210 records were submitted for 2012. No updates for previous year's data. No mesh size range information reported for vessels under 10 meters. No specific condition reported. Few records for vessels > 10m with no mesh size range information mainly for pots and gills.

Comparison of 2011 mesh size data with 2004-2010 shows that they are not consistent and significantly different. Neither mesh size nor SPECON (BACOMA window, T90) information were available from the database for 2004-2010. Thus these information were estimated based on expert knowledge and assumptions. Targeted species assemblages (métier), actually fish species caught and gear used were taken into account to identify mesh size. In 2011 data about mesh size were calculated based on actual information derived from logbooks, this caused that many "-1" values (missing values) which were reported for 2001-2010, become known and changed into "16-31" or "32-54" in 2011.

#### 4.3.5.12 Portugal

Portugal provided landings by species and by rectangle for the period 2003-2012 for vessels  $\geq$  10 meters with the aggregation requested by the data call, based on logbook data. Data for the ICES areas 6b, 7k, 8c, 8d, 8e, 9a, 9b, 10, 12 and 14, as well as for the CECAF areas were provided. Around 20% of records, identified as having wrong ICES rectangle codes, with 3 characters instead of 4, were corrected (e.g. "4C1" corrected to "04C1"). Although not identified as errors, all lower case codes were changed to upper case, to be used by case sensitive programs.

No spatial effort information is available for vessels < 10 meters, since they are not required to complete logbooks. No quality check was performed.

#### 4.3.5.13 Spain

##### Data provided in 2013:

Between May and June of 2013 Spain provided spatial landings data from 2012 by quarter, vessel length range, gear, mesh size range and metier (fishery). Landings were provided for BSA; ICES Subareas 1, 2, 5, 6, 8, 9, 10, 12 and 14; ICES Divisions 3b3, 3c, 7a, 7b, 7c, 7d, 7e, 7f, 7g, 7h, 7j, 7k, 8a, 8b, 8c, 8d, 8e, 9a and CECAF Divisions 34.1.1, 34.1.2, 34.1.3 and 34.2.0. Landings were divided by COAST/EU/RFMO zones where appropriate. All landings were split in special condition DEEP

and NONE (according to the Effort Regime in Deep Sea fisheries). In ICES Divisions 8c and 9a there were not special condition (IIB72ab) landings (Hake Plan) because no vessel in 2012 has applied for that condition in relation to hake and *Nephrops* recovery plan (Annex IIB of R(EU) No 43/2012). Landings were not divided in either Cod or Sole Plan special conditions owing to lack of time. Landings were provided for 79 of the 122 species of the 2013 data call (the other 43 do not appear in our fisheries by rectangle). No information about vessels under 10 meters was provided since data source was logbooks, but 2012 Annex IIB (Hake Recovery Plan in 8c & 9a), which is the main Plan for Spain, does not deal with vessels under 10 meters.

There were no data from Spain submitted for earlier years.

#### 4.3.5.14 Sweden

A number of 7505 records were submitted for 2012. No updates for previous years data. There were few records with missing gear information as well as few records for pots, dem\_seines and gills without any mesh size reported.

Landings data by rectangle has been submitted in the required format for the years 2003-2012, including landings by vessels <10m LOA. Landings were derived from the logbook data base.

#### 4.3.5.15 United Kingdom

A fully revised time series (2003-2012) was provided this year, which resulted in minor changes to earlier years (2003-2008) and included the separation of special condition CPart13 into its components a,b,c,d. A number of records were submitted with missing mesh sizes for pots and dredges where mesh size was not applicable. Some records with both area BSA and special condition DEEP were submitted and ignored in the analysis. Special conditions reported were DEEP, CPart11, CPart13a,b,c,d, FDFIIA and FDFIIC.

Scotland: A number of 200057 records were submitted for 2007, 2009 - 2012 time period. There were few records with missing gear information as well as few records for otters, trammels, dem\_seines and gills without any mesh size reported.

New data was submitted for 2012 and revised data submitted for 2009-2011 to accommodate the split in specific condition CPart13 for all the fleets for vessels 10m and over and for vessels under 10 meters according to the data call. Specific conditions reported were DEEP (2003-2008), DEEP and CPart13A, CPart13B, CPart13C, CPart13D (2009) and DEEP, FDFIIA, CPart11 and CPart13A, CPart13B, CPart13C, CPart13D (2010-2012).

#### 4.3.6 Fisheries specific landing and effort data 2003-2010 of small boats (< 8m or <10m)

This STECF EWG 13-06- report provides an overview of landings and effort data provided by the experts regarding their national fisheries of small vessels <8m or <10m, which are not obliged to report their landings through logbooks but rather do landings declarations.

Previously, information on small vessels has been provided in the reports only as a series of individual country reports describing activities and landings. In this report individual country information is again provided where available – new information is provided from several countries. An attempt is also made to compile available information for each area into overall figures. Since not all countries were able to fulfil this part of the data call, the aggregate estimates for each region of the cod recovery zone must be considered as minimum estimates. Nevertheless, they begin to give an idea of the scale

of landings contributed by these smaller classes of vessel and can be used to comment on the likely relative importance compared with the regulated vessels.

Member States' data submissions for small boats are summarized in the previous sections by data table A-E, sections 4.3.1-5, respectively.

#### 4.4 Estimation of fisheries specific international landings and discards

The estimation of fisheries specific international landings and discards is based on linking the information about fisheries specific discards and catch and discards at age among countries and replacing poor or lacking values with aggregated information from other countries.

Reported data by country are aggregated by fisheries properties and raised to the officially reported landings or discards in the format stipulated in the annual DCF fishing effort data calls. A similar format had been designed by ICES SGDFP 2004 (ICES 2004) format. Fisheries definitions are based on area, year, quarter, gear, mesh size groups, special conditions as defined in Council Reg. 41/2007 Annexes IIA-C and 57/2011 Annexes IIA-C or the multiannual management plans, and national fisheries (metiers) definitions.

The data aggregation and estimation procedures follow the simple raising strategies outlined below:

- Data aggregation:

The national fisheries data (row specific records in the data submissions from Member States) are classified to their management areas or sub-areas, species, years, quarters and effort regulated gear groups by disregarding the country and national fishery definitions (metiers).

- Estimation of discard rates by fisheries and raising of discard for non-sampled fisheries:

Let the following notation be: D=discards, L= landings, *snf* = national fishery with a discard value from 0 to X, *unf* = non-sampled fishery without a discard value.

The available landings and discards are aggregated (summed) over fisheries (by species, year, quarter, effort regulated area, effort regulated gear, special condition) and mean discard rates DR are calculated:

$$DR = \frac{\sum_{snf} D_{snf}}{\sum_{snf} (L_{snf} + D_{snf})} \quad \text{if } D_{snf} \geq 0 \text{ and with } L_{snf} + D_{snf} > 0$$

Fisheries specific discard amounts are then calculated if no discard information is available by

$$D_{unf} = \frac{L_{unf} \cdot DR}{(1 - DR)} \quad \text{where } D_{unf} \text{ is null (empty)}$$

Fisheries without any discard information, i.e. no average DR could be estimated, remain without any discard estimation as no quantitative information is available.

- Estimation (raising) of landings in numbers and mean weight at age for non or poorly sampled national fleets

A poorly sampled fishery is defined as such if the Sum of Products SOP derived from numbers at age landed times weight at age

$$SOP_{snf} < 0.75 \text{ or } SOP_{snf} > 1.25$$

Data of landings in numbers at age and their weight at age of poorly sampled fisheries are replaced with -1, meaning no information available.

Let  $i$  be the age reference.

Landings in numbers ( $N_{snf,i}$ ) and mean weight at age ( $W_{snf,i}$ ) are aggregated (summed for  $N_{snf,i}$  and averaged for  $W_{snf,i}$ ) over all sampled fisheries when  $SOP_{snf} \geq 0.75$  and  $SOP_{snf} \leq 1.25$ .

Raising of numbers at age and respective fill in of mean weights at ages 0-11 to non or poorly sampled fisheries by

$$N_{unf,i} = \frac{\sum_{snf} (N_{snf,i}) \cdot L_{unf}}{\sum_{snf} L_{snf}}$$

$$W_{unf,i} = \text{mean}(W_{snf,i})$$

The mean weights are non-weighted and an appropriate weighing procedure, e.g. number of fish measured, should be explored.

Fisheries for which no summed landings in numbers at age information and mean weights at ages could be estimated remain non-raised, i.e. without any quantitative information.

- Estimation (raising) of discards in numbers and mean weight at age for non or poor sampled fleets

A poorly sampled fishery is defined as such if the Sum of Products SOP derived from numbers at age discarded times weight at age

$$SOP_{snf} < 0.75 \text{ or } SOP_{snf} > 1.25$$

Data of discards in numbers at age and their weight at age of poorly sampled fisheries are replaced with -1, meaning no information available.

Let  $i$  be the age reference.

Discards in numbers ( $N_{snf,i}$ ) and mean weight at age ( $W_{snf,i}$ ) are aggregated (summed for  $N_{snf,i}$  and averaged for  $W_{snf,i}$ ) over all sampled fisheries when  $SOP_{snf} \geq 0.75$  and  $SOP_{snf} \leq 1.25$ .

Raising of numbers at age and respective fill in of mean weights at ages 0-11 to non or poorly sampled fisheries by

$$N_{unf,i} = \frac{\sum_{snf} (N_{snf,i}) \cdot D_{unf}}{\sum_{snf} D_{snf}}$$

$$W_{unf,i} = \text{mean}(W_{snf,i})$$

The mean weights are non-weighted and an appropriate weighing procedure, e.g. number of fish measured, should be explored.

Fisheries for which no summed discards in numbers at age information and mean weights at ages could be estimated remain non-raised, i.e. without any quantitative information.

#### ■ Estimation of catch and catch at age in numbers including discards

Catches by fisheries are estimated as the sum of landings and discards, also where discards are lacking.

Catches at ages 0-11 in numbers by fisheries are estimated as the sum of landings at age in numbers and discards at age in numbers, also where discards are lacking.

Mean weights at ages 0-11 are estimated at weighted means (according to ratios of landings at age and discards at age to catches at age, respectively).

Finally, all fisheries' catches and catches at ages in numbers and mean weights are aggregated (summed or averaged, as appropriate) over management areas, species, years, effort regulated gear groups and special conditions.

It needs to be realised that fisheries for which no aggregated information on discards or landings in numbers at age and discards in numbers at age is available from other countries fisheries remain non-raised. STECF EWG 13-06 concludes that these non-raised fisheries may need to be subject to a specific raising procedure if total catch and catch in numbers is to be estimated and if the individual non-raised fisheries constitute significant catches.

The EWG 13-06 notes that sampling of catch at sea including discards is expensive and difficult. This means that sampling coverage tends to be rather limited, and estimates of discards are subject to high uncertainty. This is true of all the discard data used here, and in some cases the discard estimates presented represent the first attempt to use the discard data from some fisheries in an advisory context. Where the coverage is considered adequate to estimate the overall catch compositions of specific fleets these are presented, but they are intended only to provide an approximate indication of fleet catch compositions. In cases where there are little data, the estimated discard rates may be biased and imprecise (Stratoudakis *et al.*, 1999). The mean weights are estimated as unweighted means. This results in a biased estimate. An appropriate weighing procedure, i.e. number of fish measured, should be explored.

EWG 13-06 further notes that the approach of discard estimation applied is generally consistent with the method used in the discard estimates published by the FAO (Kelleher, 2004). However, the group also notes that the design of a discard sampling scheme might differ depending on whether the objective was to estimate total discards, or discard for specific fleets. In the current context estimates from sampling schemes designed for the former purpose are being used for the latter purpose which

again means the estimates should only be used with caution. Where this is the case, comparisons are made between the estimates of total discards used for assessment purposes, and the fleet-specific estimates used here.

#### 4.5 Coverage Index of Discard Estimates DQI

STECF EWG 13-06 noted the high emphasis on discard estimates for scientific, advisory and management purposes. STECF EWG 13-06 notes that the scientific resources to monitor discards by fisheries are limited and thus best use of the scarce national information requires a defined raising procedure. Furthermore, STECF EWG 13-06 also notes that it has developed and applied a consistent approach to estimate discards by fisheries (Member State, species, year, quarter, area, gear, special condition) as described in the previous section 4.4. The available landings and discard quantities have been provided by Member States in accordance with the DCF data calls to support fishing effort regime evaluations. The provisions of the DCF data call invite the Member State to estimate its discards applying best practices and to omit the submission of an estimate if the discard sampling is considered inadequate or best practices cannot be applied. STECF EWG 13-06 estimates discards by fisheries based on reported landings quantities by applying an average discard rate if a Member State has not provided a discard estimate.

In order to allow an assessment of the representativeness of the discard estimates by species and fisheries, STECF EWG 13-06 has developed and provided a coverage index attached to its provided discard estimates in this report and its electronic appendixes provided on the website of the STECF EWG 13-06. The discard coverage index is called DQI.

STECF EWG 13-06 notes that the DQI does not support precise conclusions on data quality based on scientific criteria but rather aims to classify the available information and is therefore fully dependent on correctness of the submitted national landings and discards estimates.

The index represents the sum of landings with discard estimates by species and fishery (species, year, area, gear, special condition) in relation with the total sum of landings in the given segment. It is estimated as

$$DQI = \Sigma L_d / \Sigma L$$

where L denotes landings (t) and  $L_d$  landings with a discard estimate.

In order to facilitate the interpretation of the DQI value, the DQI is classified in three groups. The groups are defined as

- A = 67 % or more of the provided landings are with an accompanying discard estimate,
- B = 34-66 % of the provided landings are with an accompanying discard estimate, and
- C = less the 33 % of the provided landings are with an accompanying discard estimate.

STECF EWG 13-06 interprets the A qualified discard estimates as rather representative as the majority of the landings by species and fishery are provided with national discard estimates. However

it should be noted again that this discard coverage index cannot inform on the quality of the discard rate estimates supplied by nations (as affected for example by the proportion of fishing trips sampled for discards).

The B qualified discard estimates are then seen as requiring a careful review before any use.

Finally, STECF EWG 13-06 advises the C qualified discard estimates in its deliveries (tables and appendixes) not to be used as the majority of the reported landings lack a discard estimate.

#### **4.6 Treatment of CPUE data**

In this report, EWG 13-06 presents CPUE by regulated gears in units of g/(kW\*days). Where discard estimates are not available, the trends in LPUE (landings per unit of effort) are given in the same units. Unfortunately, discard information continues to be sparse or absent for some categories of gear in some areas. **The STECF EWG wishes to stress again that great care should be used in the interpretation of the discard and resulting catch data owing to the incomplete nature of information on discarded fish.**

EWG 13-06 notes that CPUE series are often interpreted and used as stock abundance indicator. However, EWG 13-06 emphasises that the presented trends in CPUE by fleets are subject to selective fishing strategies (area, gear, mesh size etc.) and thus maybe biased. On the other hand, CPUE derived from targeted fisheries may provide very useful information on stock abundance trends. Furthermore, it must be taken into consideration that the majority of the CPUE trends represent only overall weights in the landings (LPUE) without discards or with poorly estimated discards. Ideally, the CPUE should be based on age disaggregated abundance rather than overall weights and reflect technological creep when trends over longer periods are evaluated.

#### **4.7 Ranking of gears on the basis of contribution to catches**

Where required, EWG 13-06 presented the ranked contributions of the individual effort regulated gears to cod, plaice and sole catches for the years 2003 to 2012. There was discussion about whether the ranking should be based on a single recent year (possibly reflecting the most up to date importance of the different gear types in contributing to mortality of these species) or an average for a range of years (which allows for any aberrations in the series). A presented rankings are according to catch estimates or landings in 2012.

The catch estimates are based on the sums of the landings and discards where available. EWG 13-06 considers the catch estimates as uncertain where fisheries lack discard estimates or they are poorly sampled. The ranking according to catch in numbers only considers derogations for which catch in numbers are available. **STECF EWG 13-06 wishes to stress again that great care should be used in the interpretation of the discard and resulting catch data owing to the incomplete nature of information on discarded fish.**

#### **4.8 Summary of effort and landings by ‘unregulated’ gears**

In the summary tables of effort a total value for a ‘none’ category is provided. This ‘none’ category represents

- i) gear types and mesh sizes which are unregulated, i.e. non-regulated by effort in addition to

ii) unidentified mesh sizes. In the main effort summary tables, this category is not broken down into its constituent gears.

iii) the so-called derogation Swedish grid, which was encoded as IIA83b and CPart11, respectively. This gear configuration is explicitly exempted from the effort regime (R (EC) No 754/2009).

However, STECF EWG 13-06 has provided a break down of the main gears within the 'none' category in a dedicated subsection for each area. Information is given on effort (kW\*days at sea) for gears such as 'beam', otter, pots, dredges etc, and for catches by these gears of key species (e.g. cod, plaice and sole). This analysis helps to identify which gears contribute significantly to landings of these species but which are not currently regulated.

With the adoption of the revised cod recovery plan towards the end of 2008 and the simplified list of regulated gears for which data are now collated, the compilation of the unregulated categories was more straightforward in 2009 onward and the data appear to be reliable.

It is important in making use of the data in this report, that the 'none' material is not counted more than once. It would be preferable to use data from the sections covering unregulated gears.

#### **4.9 Presentation of spatial information on effective effort and landings**

STECF EWG 13-06 notes that minimum geographic resolution in the available logbook information on landings and effective effort is by ICES rectangle and considers analyses to only be possible at that resolution at the present time. In a number of the smaller areas, however, this resolution is inadequate for describing any localised changes of effort distribution (for example, in the Kattegat) and finer scale is desirable. Increasing availability of VMS data should provide opportunities for improved resolution in due course. STECF EWG 13-06 notes that only major changes in the geographical distribution patterns should be given attention given the imprecision of the created data set. A full set of figures is available electronically but a selection of key gears is included in this report.

Figures use a common scale across years for a given gear group (e.g. TR1) but scales are unique to each category such that the colours assigned to statistical rectangles for category TR1 cannot be compared directly to those assigned for category TR2. Note that this year the scale used in the plots relates to the actual effort values (rather than the percentile method used in previous years).

#### **4.10 Response of EWG 13-06 regarding the estimation of spatio-temporal patterns in catchability**

STECF EWG 13-06 continued its considerations which started during STECF EWG 13-06 and adopted the definition of catchability ( $q$ ) as the relationship between the catch rate (CPUE) and the true population size. Consequently, the unit of catchability is fish caught per fish available per effort unit and per time unit, or, in easier words, catchability can conceptually be considered as the probability of any single fish being caught (Jul-Larsen *et al.*, 2003).

STECF EWG 13-06 notes that many factors are related to catchability, e.g. mainly fish abundance at a certain time in a certain area and gear efficiency (fishing power) including use of the gear and fishers' experience (Marchal *et al.*, 2001). A standard solution to evaluate changes in catchability is therefore to compare catch rates from commercial and research fishing where the catchability of the research fishing is holding constant from year to year (Neis *et al.*, 1999):

$$\text{CPUE (fishery)}/\text{CPUE (survey)} = q \text{ (fishery)}/q \text{ (survey)}$$

This catchability index has no units, as it represents the ratio of fish caught per fish available per effort unit and per time unit.

STECF EWG 13-06 identified the needs to estimate catchability coefficients and to undertake spatio-temporal analyses of them. The calculation of catchability indices for cod per ICES statistical square (rectangle) and year is derived from standardized and averaged ratios between CPUE by fishery and CPUE based on survey indices.

The estimation of catches by rectangle is derived from a raising procedure applied to landings data by stock, nation, fishery (effort regulated gear groups), year, quarter and rectangle to estimate discards and conclude on catches at this aggregation level. National landings by stock, fishery, year, quarter and rectangle were raised by average national discards rates obtained by stock, fishery, year and quarter without rectangle:

$$C_{\text{stock, nation, fishery, year, rectangle}} = \Sigma (L_{\text{stock, nation, fishery, year, rectangle}} / (1 - DR_{\text{stock, nation, fishery, year}})),$$

where C denotes the catch in weight (t), L denotes the landings in weight (t), and DR denotes a specific average discard rate based on the DCF data submissions of landings and discards. Where the discard rate is unknown, landings figures were accepted as a best estimate of catches.

Average national commercial catch rates by stock, fishery, year and rectangle were then estimated from

$$\text{CPUE}_{\text{stock, nation, fishery, year, rectangle}} = C_{\text{stock, nation, fishery, year, rectangle}} / E_{\text{stock, nation, fishery, year, rectangle}},$$

where CPUE denotes the catch rates, C the estimated catch in weight (t) and E the fishing effort in units of fished hours.

The catchability index CA per stock, year and rectangle is then derived from the ratio between the averaged commercial CPUE values by stock, nation, fishery, year and rectangle, each of them divided by the CPUE from the respective average scientific survey CPUE in units of weight (kg). Both catch rate estimates, the commercial and the scientific ones, were made subject to log transformation in order to reduce the high variation between years and rectangles.

$$CA_{\text{stock, year, rectangle}} = \Sigma_n (\ln(1 + \text{CPUE}_{\text{stock, nation, fishery, year, rectangle}}) / \ln(1 + \text{CPUE}_{\text{stock, survey, year, rectangle}})) / n,$$

where n is the number of nation-fleet combinations.

STECF EWG 13-06 has not performed due to time constraints and defers presentation of spatio-temporal analyses of cod catchability to its second meeting STECF EWG 13-13 (7-11 October 2013, Ispra, Italy). Catchability analyses will be updated for the Baltic Sea (areas A and B for the Eastern and Western cod stocks combined) and for the cod stock of the Skagerrak, North Sea, 2EU and Eastern Channel and in relevant specific sections.

#### **4.11 Amendments of the 2013 DCF data calls to support fishing effort regime evaluations**

STECF EWG 13-06 noted that its recommendations to amend the 2013 DCF data call to support fishing effort regime evaluation have been implemented and that these changes will support the accomplishment of specific ToR.

STECF EWG 13-06 noted that the 2013 DCF data call to support fishing effort regime evaluations covered few but important changes as compared with the data call in 2012. The only structural change in the 2013 data call was the an additional variable called for the Baltic Sea specific fishing effort analyses, called FISHING\_ACTIVITY\_DAYS at a rather high aggregation level (by the cod plan areas A and B, country, year and all effort regulated gears). This additional variable was defined for the entire period of the data call (2003-2012) and thus required a complete re-submission of data for the period 2003-2011 in addition to the requested data update for 2012.

The second major change of the DCF data call in 2013 regards the definition of the multiannual cod plan (Coun. REg. No 1342/2008) specific provisions given in art 13, paragraphs a, b, c and d. Member States were invited to deliver fisheries specific catch and effort data to support specific analyses related to the cod plan implementation, which required re-submission for the years 2009-2011 in addition to the requested update for 2012.

The third major change of the DCF data call in 2013 regards additional analyses of fully documented for sole in the Western Channel.

STECF EWG 13-06 noted that the DCF data call in 2013 required re-submissions of re-aggregated data in addition to the re-requested data update for 2012, which implied additional workload for the national institutions involved in the DCF framework.

#### **4.12 Comparison of effort, landings and discards output from the STECF data base and the data used in ICES WGMIXFISH**

The working group on Mixed Fisheries Advice (WGMIXFISH) did in April 2013 undertake to compare the effort, landings and discards in the STECF data base and the data used in WGMIXFISH. The result was also presented at the STECF EWG-13-06 meeting.

The totals landed and effort employed by directly comparable categories should be the same between datasets but experience in WGMIXFISH shows that data compiled to different data calls can produce different totals. Discard data is only sampled for a fraction of national fleets. The way the discard data is raised within a nation can be affected by the grouping of vessels implied by a fleet specific data call. Additionally, once the 'raw' data is supplied a working group has choices whether to assign a discard rate (and associated discards) to unsampled fleets and if so how. It is known the assignment process for WGMIXFISH and STECF is different.

WGMIXFISH therefore undertook to compare the landings, effort and discards (after assignments) between comparable categories in the MIXFISH and STECF datasets. Because WGMIXFISH is held before finalisation of the STECF dataset the comparison was made using 2011 data.

As expected, the largest differences between the data sets were found in the discard estimates. This could be the result of different rules for assigning discards to metiers where discard data is missing in the working groups. It could also be an effect of countries submitting different discard estimates to various working groups, to meet the requirements in the different formats of the data calls and therefore using different raising procedures. There was not time to investigate the causes of any differences at this point and this work should merely be viewed as a starting point for a further discussion. The STECF EWG 13-06 advises that this work may be continued in the EWG 13-16 - Landing Obligation in EU Fisheries.

Gears, countries, species and areas, and level of aggregation, in the data used in the comparison:

- Gear types: TR1 (trawls or seines with a mesh size  $\geq 100$ mm), TR2 (trawls or seines with a mesh size range of 70-99mm), TR2\_grid (Nephrops trawls with a mesh size of 70-89mm and

a sorting grid, only Swedish data in 3an), BT1 (Beam trawls with a mesh size  $\geq 120\text{mm}$ ) and BT2 (Beam trawls with a mesh size range of 80-119mm).

- Countries: Belgium (BE), Denmark (DK), England (EN), France (FR), Germany (GE), The Netherlands (NL), Scotland (SC) and Sweden (SW).
- Areas: 3an (Skagerrak), 4 (North Sea) and 7d (Eastern Channel)
- Species: Cod (COD) in all areas, haddock (HAD) in area 4 and 3an, Nephrops (NEP) in area 4, plaice (PLE) in area 4, saithe (POK) in area 4 and 3an, sole (SOL) in area 4 and whiting (WHG) in area 4 and 7d.
- Year: 2011

Fig. 4.12.1 Scatter plot of all nominal effort data points used in the comparison except for one very high value.. One point represents one country's data (kW\*days at sea) by one gear (TR1, TR2, BT1 or BT2) in one area (Area 3an, 4 or 7d) in the STECF data base (x-axis) and the WGMIXFISH data (y-axis) in 2011. The removed value was 25778661 and 24094541 kWd in the STECF data base and WGMIX data respectively. The line shows the 1:1 relation between x- and y-axis, for reference.

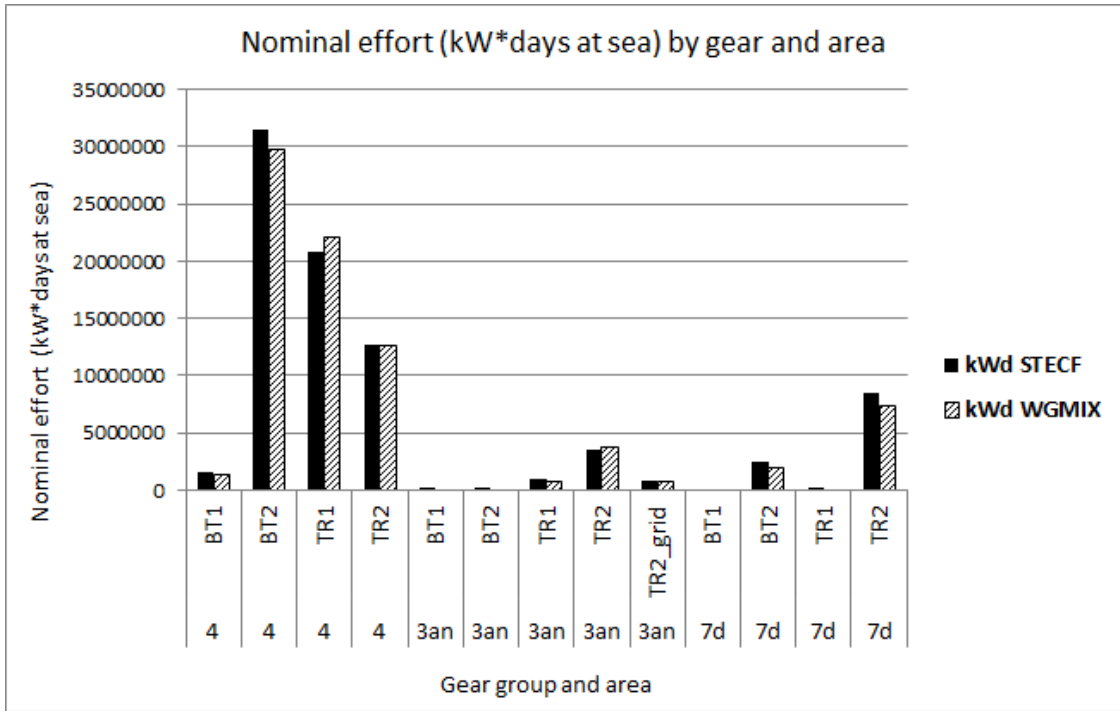

Fig. 4.12.2 Nominal effort (kW\*days at sea) by gear type and area, all countries combined, in both the STECF data base and in the WGMIXFISH data for 2011.

Fig. 4.12.3 Scatter plot of all landings data points used in the comparison. One point represents one country's data (landings in tonnes) for one species by one gear (TR1, TR2, BT1 or BT2) in one area (Area 3an, 4 or 7d) in the STECF data base (x-axis) and the WGMIXFISH data (y-axis) for 2011. The line shows the 1:1 relation between x- and y-axis, for reference.

Fig. 4.12.4 Landings in tonnes by species and area, all gears (TR1, TR2, BT1, BT2) and all countries combined in the STECF data base and in the WGMIXFISH data for 2011. COD=cod, HAD=haddock, NEP=Nephrops, POK=saithe, SOL=sole, WHG=whiting.

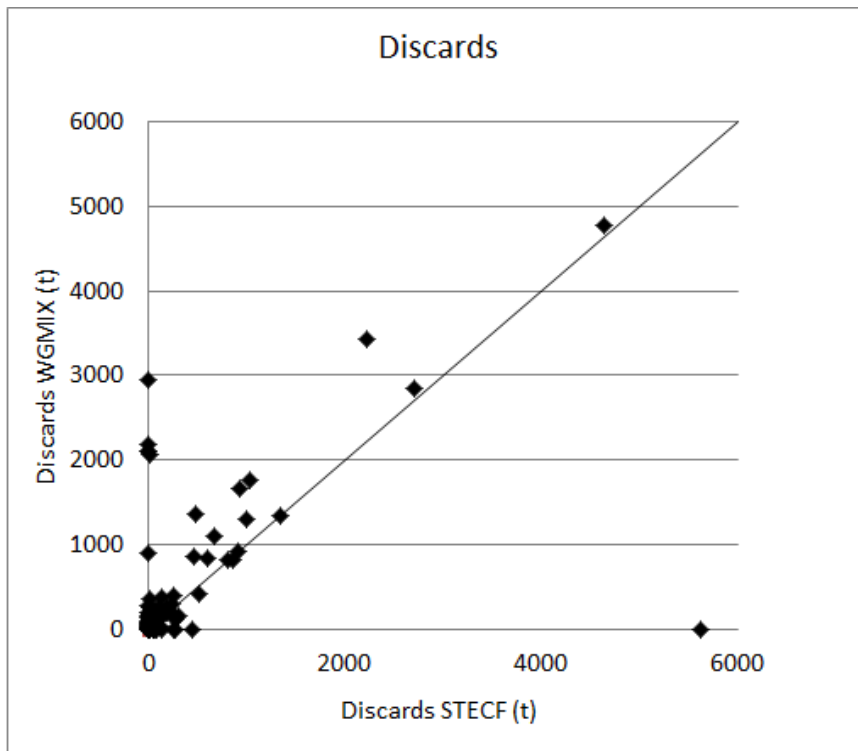

Fig. 4.12.5 Scatter plot of all discard data points used in the comparison except one very high value. One point represents one country's data (discards in tonnes) for one species by one gear (TR1, TR2, BT1 or BT2) in one area (Area 3an, 4 or 7d) in the STECF data base (x-axis) and the WGMIXFISH data (y-axis) for 2011. The removed value was 19232 tonnes in the STECF data base and 22064 tonnes in WGMIXFISH data. The line shows the 1:1 relation between x- and y-axis, for reference.

Fig.4.12.6 Discards in tonnes by species and area, all gears (TR1, TR2, BT1, BT2) and all countries combined in the STECF data base and in the WGMIXFISH data for 2011. COD=cod, HAD=haddock, NEP=Nephrops, POK=saithe, SOL=sole, WHG=whiting. The discards of Plaice are not shown here due to the large amount. The discards of Plaice in area 4 were 27853 tonnes in the STECF data base and 29087 tonnes in the WGMIXFISH data.

## 5 EVALUATIONS BY FISHING EFFORT MANAGEMENT REGIME

### 5.1 Baltic Sea effort regime evaluation in the context of the management plan for Baltic cod (Council Regulation (EC) No 1098/2007)

#### 5.1.1 ToR 1.a Fishing effort in kWdays and GTdays by area, Member State and fisheries

Table 5.1.1.1 lists the trends in effort for gear categories defined in the cod management plan Council Regulation (EC) 1098/2007 in kW\*days at sea for the whole Baltic. Table 5.1.1.2 lists the trends in effort by gear category and sub-area for regulated gears. Table 5.1.1.3 lists relative annual effort dynamics in Baltic cod r-GILL and r- OTTER fisheries in 2004-2012 by gear category and sub-area. Figures 5.1.1.1 – 5.1.1.6 show effort trends in regulated and unregulated gear categories by sub-areas.

In accordance with the TOR respective tables by gear-category, sub-area and member states in GT\*days at sea (GT gross tonnage), activity (in days absent from port) and capacity (number of vessels) are available on the web site of the EWG. STECF EWG 13-06 emphasizes that the days at sea and number of vessels need to be interpreted with care and cannot be added across gear categories as the individual vessels may have been engaged in more than one of the defined fleets and thus could be multiple counted.

There have been marked reductions in effort measured in kW-days in 2004-2012 both for regulated gears in accordance with Council Regulation (EC) 1097/2007 and unregulated gears. The total effort deployed in the Baltic in 2012 was 53% lower compared to 2004 and 46% lower compared with 2011 (Table 5.1.1.1).

A clear reduction in total effort could be observed for sub-area A until 2010. Since then the total effort stabilized. The effort dynamics in main regulated gear types show contrasting trends in 2011-2012: the effort of regulated pelagic trawls decreases and that of regulated demersal seine increased while regulated otter trawl effort remained unchanged (Figures 5.1.1.1.-5.1.1.2). Figures 5.1.1.2 and 5.1.1.3 display the trends in area B. The overall effort of regulated gears has increased since 2010 slightly due to increase in r-otter effort. The effort of non-regulated gears decreased from 2011 substantially. In area C the effort deployed with unregulated gears shows clear decreasing trend since 2010 (Figure 5.1.1.5). Since the majority of cod catches stem from areas A and B (see section below), the slight increase in total effort can be observed both for regulated and unregulated gears. Table 5.1.1.3 describes the relative annual effort dynamics in Baltic cod r-GILL and r-OTTER fisheries in 2004-2012. The total effort showed a consistent decreasing trend in area A until 2011. A decrease could be observed also in area B, except for the 2010 and 2011 which resulted from effort deployed by r-OTTER equipped with T90. The effort dynamics in area C did not show any particular trend.

The effort dynamics in Sub-division 28.2 increased in 2012 after the steady decrease due to increased regulated OTTER effort (Figure 5.1.1.8). This increase, however, should be taken with caution since the information on r-OTTER may have been partly generated on the basis of effort deployed by other gears while choosing predominant fishing gear during the year for the vessels involved. In 2012, the total effort in the area decreased again.

The decrease in total effort for the main gears catching cod in areas A and B (regulated otter, see section below) was obvious for all Member States (Table 5.1.1.4). When combining specon BACOMA and none, the reductions were most pronounced for Denmark (-68%) and Germany (-53%) in area A, and most pronounced for Poland (-79%) and Germany (-49%) in area B. In contrast, the effort for r-Gill (the second most important gear, see section below) increased for Denmark and Germany in Area A (by 10% and 16% respectively). At the same time combined effort decreased for

Latvia (-80%) and for Poland (46%). This indicates a certain shift between métiers. In area B the effort increased from 2011 to 2012 in r- otter trawl fishery- in Germany 67%, Poland 49% and in Lithuania 10%. The effort decreased substantially for regulated gill nets in all Member States. The sharp increase of pelagic effort in 2004–2005, described in the Figure 5.1.1.5 can be explained by the inclusion of Estonian data from 2005-2010 which contained substantial pelagic effort.

In Sub-division 28.2 only Latvia reported the information on effort deployed in regulated GILL fishery. The effort has decreased over the period of 2004-2012 by 54% and for regulated OTTER by 58% (Figures 5.1.1.7 - 5.1.1.8).

For area C the full time series of information for regulated OTTER was not available to the group. The effort for regulated GILL decreased by 36% (Sweden). The use of BACOMA-trawls increased over the years (see Figures 5.1.1.2, 5.1.1.4 and 5.1.1.6). However, as already mentioned several Member States were not able to identify vessels fishing with BACOMA-trawls from logbook data. Therefore, the increase in the usage of BACOMA-trawls is most likely underestimated substantially and trends are highly uncertain.

Table 5.1.1.1 Trend in nominal effort (kW\*days at sea) by gear categories according to Council Regulation (EC) 1098/2007, 2004-2012. An “r” in front of the gear type indicates regulated gears. Gear types without an “r” are non-regulated gears. Data from Sweden and Poland were only available from 2003 or 2004 respectively. Relative change from 2004 to 2012.

Figure 5.1.1.1. Area A Baltic: Trend in nominal effort by gear types 2004-2012 (kW\*days at sea). Left panel: Regulated gears. Right panel: Unregulated gears. Note that data from Poland, Latvia and Lithuania are only available from 2004 and from Estonian from 2005 onwards. Therefore, effort trends are shown from 2004 to 2012. No data from Finland.

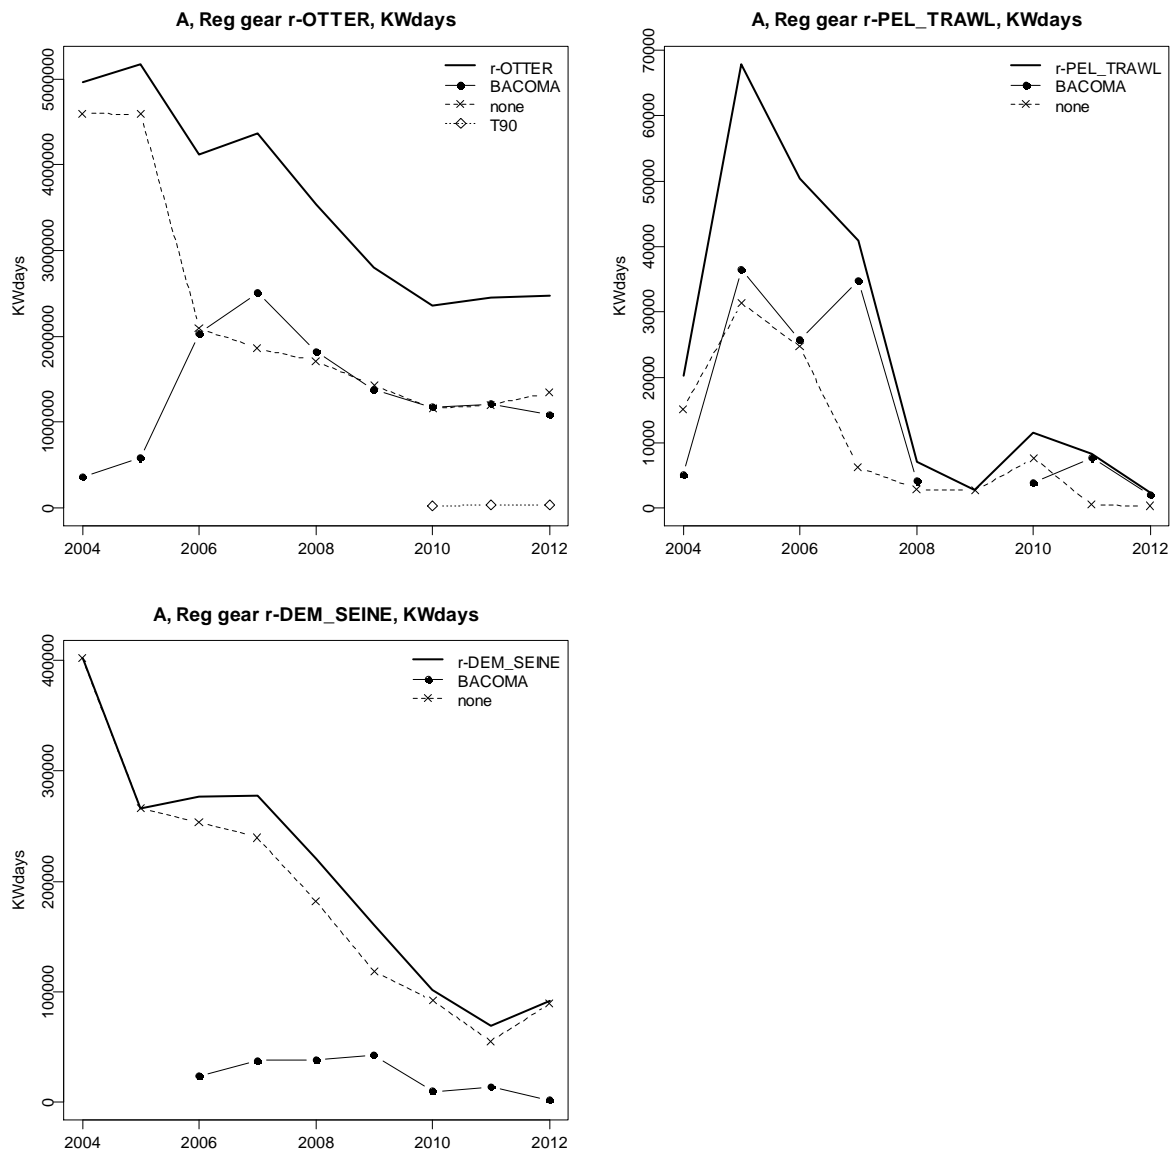

Figure 5.1.1.2. Area A Baltic: Trend in nominal by special conditions, 2004-2012 (kW \*days at sea). Note that data from Poland, Latvia and Lithuania are only available from 2004 and from Estonian from 2005 onwards Therefore, effort trends are shown from 2004 to 2012. No data from Finland.

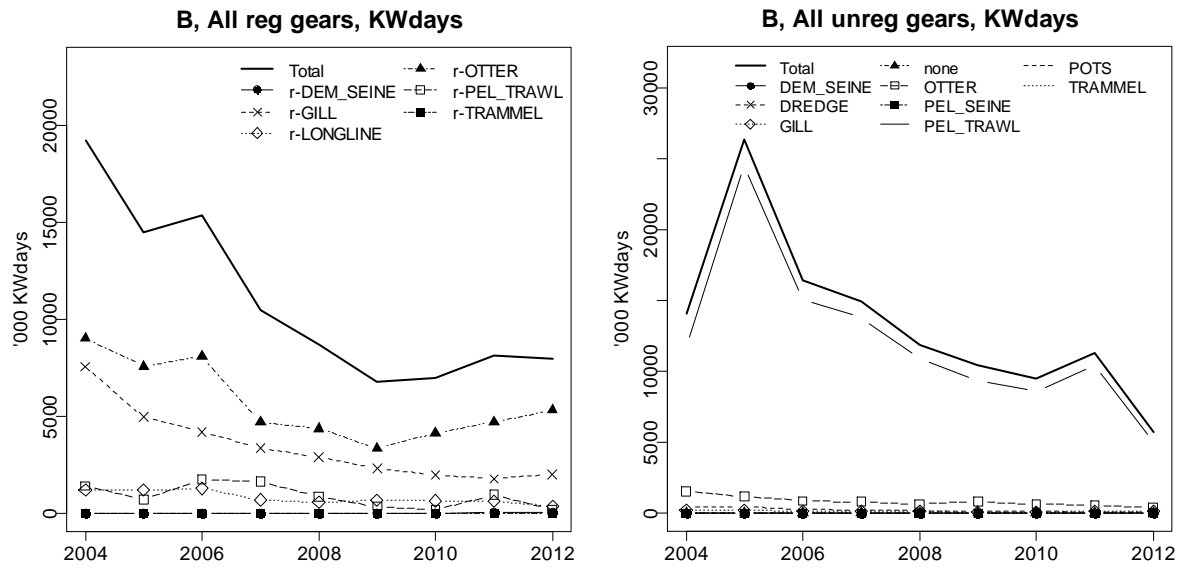

Figure 5.1.1.3. Area B Baltic: Trend in nominal effort by gear types 2004-2012 (kW \*days at sea). Left: Regulated gears. Right: Unregulated gears. Note that data from Poland, Latvia and Lithuania are only available from 2004 onwards. Therefore, effort trends are shown from 2004 to 2012. Additionally, Estonian data set of 2005-2012 was included in database. No data from Finland.

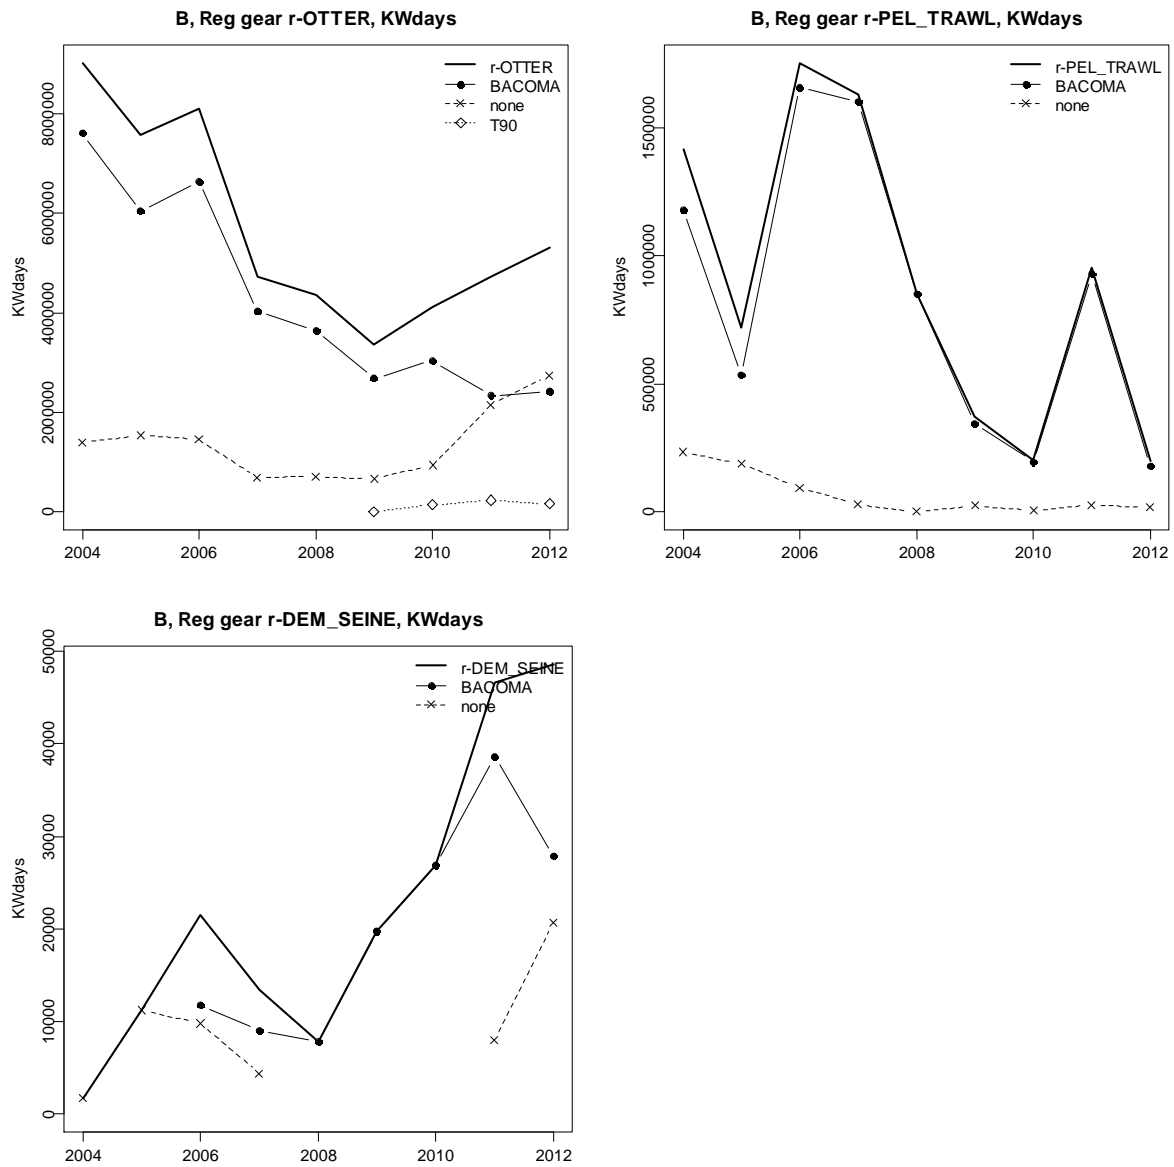

Figure 5.1.1.4. Area B Baltic: Trend in nominal effort by special conditions, 2004-2012 (kW \*days at sea). Note that data from Poland, Latvia and Lithuania are only available from 2004 and from Estonian from 2005 onwards. Therefore, effort trends are shown from 2004 to 2012. No data from Finland

Figure 5.1.1.5. Area C Baltic: Trend in nominal effort by gear types 2004-2012 (kW \*days at sea). Left: Regulated gears. Right: Unregulated gears. Note that data from Poland, Latvia and Lithuania are only available from 2004 onwards. Therefore, effort trends are shown from 2004 to 2011. Additionally, Estonian data from 2005-2012 (including substantial pelagic effort) was included. No data from Finland.

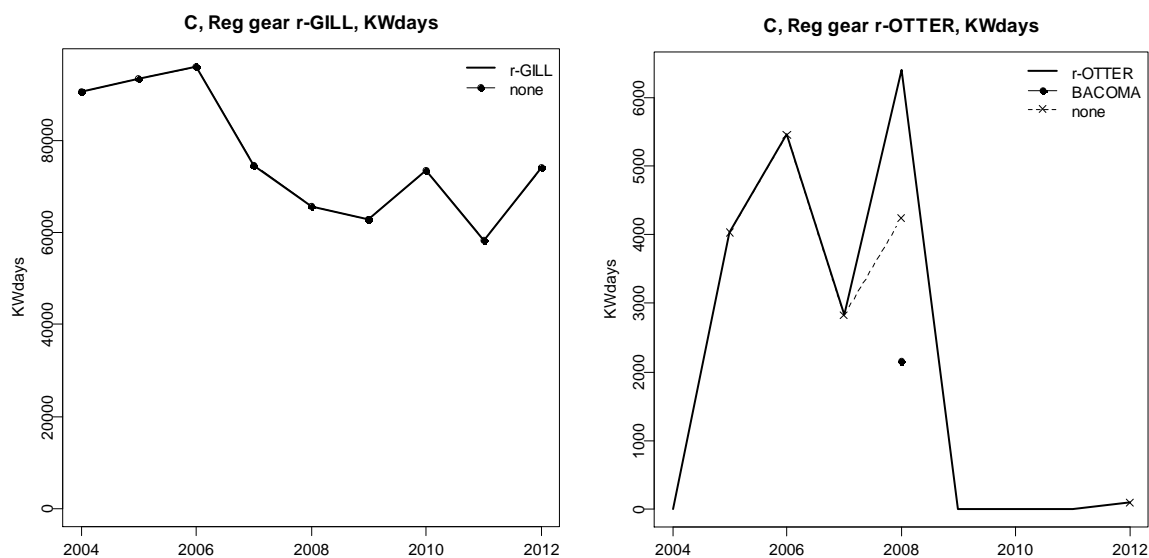

Figure 5.1.1.6. Area C Baltic: Trend in nominal effort by special conditions, 2004-2012 (kW \*days at sea). Note that data from Poland, Latvia and Lithuania are only available from 2004 and from Estonian from 2005 onwards. Therefore, effort trends are shown from 2004 to 2012. No data from Finland.

Figure 5.1.1.7. Area 28.2. Baltic: Trend in nominal effort by gear types 2004-2012(kW \*days at sea). Left: Regulated gears. Right: Unregulated gears. Note that data from Poland, Latvia and Lithuania are only available from 2004 and from Estonian from 2005 onwards. Therefore, effort trends are shown from 2004 to 2012. No data from Finland

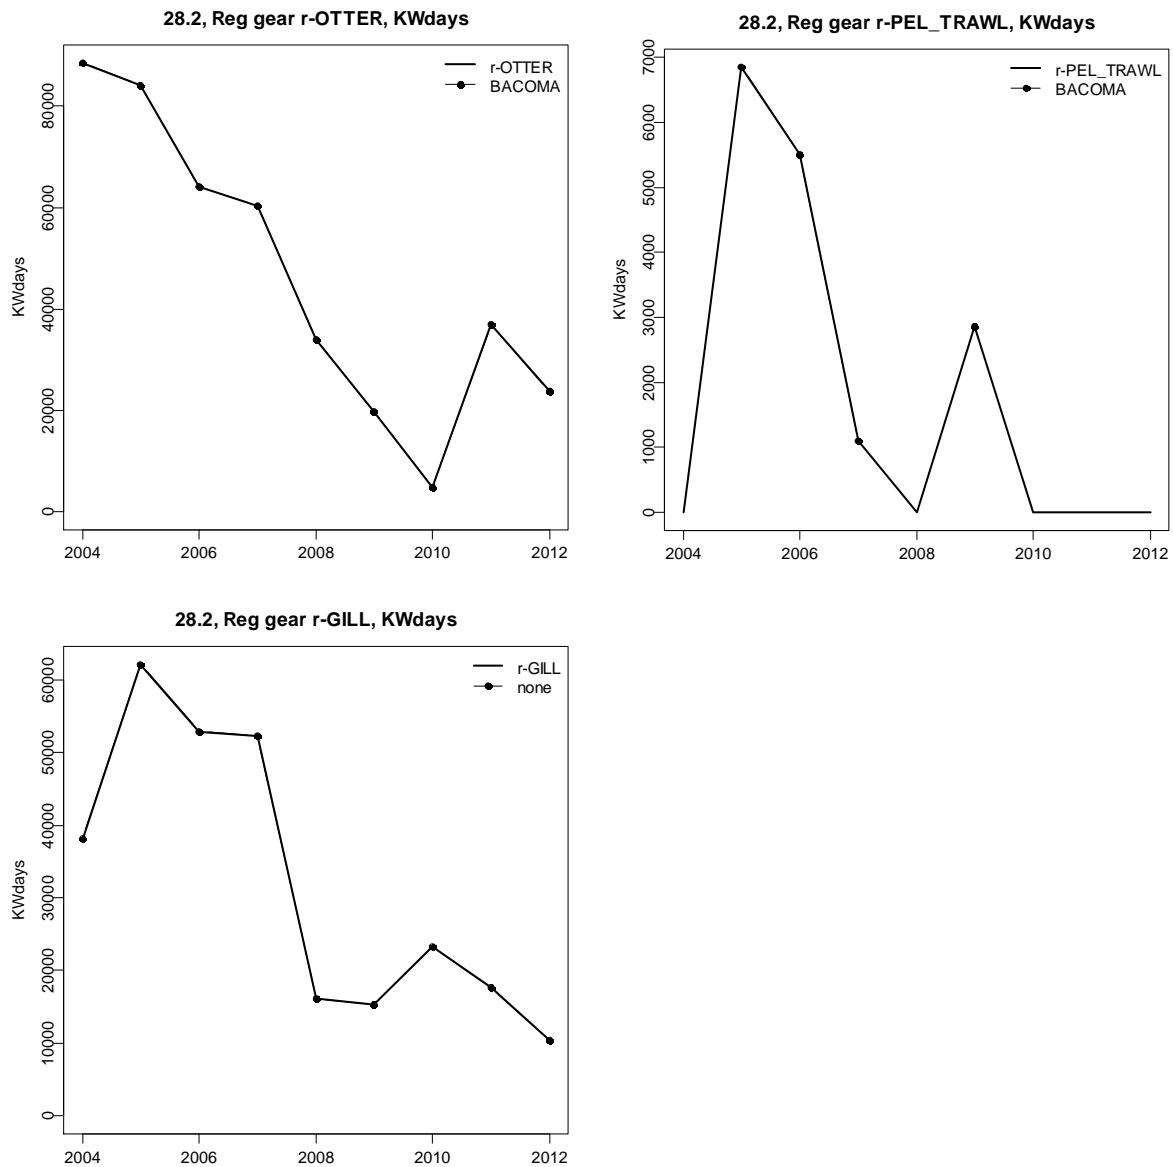

Figure 5.1.1.8. Area 28.2. Baltic: Trend in nominal effort by special conditions, 2004-2012 (kW \*days at sea). Note that data from Poland, Latvia and Lithuania are only available from 2004 and from Estonian from 2005 onwards. Therefore, effort trends are shown from 2004 to 2012. No data from Finland.

### 5.1.2 ToR 1.b Fishing activity and capacity by area, fisheries and Member State

Table 5.1.2.1 lists the estimated days at sea by area, main regulated gears (r-otter and r-gill) and Member State. The results show a clear decreasing trend over the areas A and B from total of 153,000 days at sea in 2004 to 76,000 days in 2011. In 2012 the overall number of days at sea increased to 82,000. The total decrease in fishing activity has been mostly driven by the respective trend in area B only (from 104,000 to 45,000 days. The decreasing trend was observed both in regulated gillnets and otter-trawls. At the same time the fishing activity in area A has stabilised around 37- 38,000 in 2009-2012. The figures given in the table should be, however, taken cautiously, since the multi-fold

counting may have been taken place in the cases where certain vessels may have deployed more than one specific regulated gear.

Uptake of days at sea against the available days at sea by Member state and area for regulated and non-regulated gear types in 2008-2012 is presented in the Section 5.1.7.

Table 5.1.2.1 Days at sea by area, regulated gear and Member State.

### 5.1.3 ToR 1.b Catches (landings and discards) of cod in weight and numbers at age by fisheries

The following tables list the landings and discards for cod by gear category, sub-area and Member State (Table 5.1.3.1) as well as aggregated over Member States (Table 5.1.3.2). Discard rates per year, gear category, sub-area and country can be found in Table 5.1.3.3 and aggregated over Member States in Table 5.1.3.2. In addition in Table 5.1.3.4 discard rates by sub-areas, gear category and years are presented, while in Table 5.1.3.5 discard and landing data by age is listed. Figures on landings and discards for the most important gear categories catching cod were also provided (Figure 5.1.3.1).

The overall problem highlighted in this section is the poor quality of discard data as already outlined. In addition, data from Poland are only available from 2004 and for Estonia, from 2005 onwards. Therefore, for the analyses of catch and discard trends, year 2003 had to be excluded.

The overall landings of Baltic cod in 2012 were 2.3 % higher compared to 2011 (ICES, 2012). Discards fluctuate around low values without trend over years. Despite the quality of discard estimates has essentially improved since the introduction of EU Data Collection Programs the estimates should still be taken with caution.

Most cod landings stem from areas A and B. Area C only plays a very limited role according to available data, on cod present distribution pattern in the Baltic (Landings 2012 A+B = 68222 tonnes; Landings 2012 C = 76 tonnes (0.1% of total)).

Cod discard rates for cod are higher for area B followed by area A, showing certain increase in most recent years for regulated otter trawls (Figure 5.1.3.1). This can be explained with the increase of the Eastern Baltic cod stock (ICES, 2012). For regulated gears the average discard rate in area B was 13% against 5% in area A in 2012. (Table 5.1.3.1). For area C only very minor discard rate has been observed in gillnet fishery. This probably reflects the distribution of the cod stock. Average discard rates were higher for regulated otter trawls (up to 16 % and for pelagic trawls – 13% in sub-area B in 2012). The discards from gillnet fishery generally remained below 10%. Discard rates between Member States are of comparable magnitude. Only in area B the discard rates for r-Otter were significantly higher for Sweden, Germany and Poland compared to the other countries in some years.

1.3% of total cod landings in the areas were taken in FDF. The discard rates in fully documented fishery of cod were available for 2012 and areas A and B only. Only in regulated demersal seine fishery the share of FDF was in the comparable magnitude (around 50%). The ext table below presents the average discard rates in FDF and non-FDF by comparable regulated gear types in 2012. The data suggests that the discard rates were significantly lower in FDF in demersal seine and otter trawl whereas in pelagic trawl fisheries the values were similar.

Table 5.1.3.2. Landings (t) and discards (t) for cod in 2004-2012 by gear category and area. An “r” in front of the gear type indicates regulated gears in accordance with Council Regulation (EC) 1098/2007. Gear types without an “r” are non-regulated gears. Data from Estonia are only available from 2005 onwards

Table 5.1.3.3 Discard rates for cod 2004-2012 by gear category, area and country. An “r” in front of the gear type indicates regulated gears in accordance with Council Regulation (EC) 1098/2007). Gear types without an “r” are non-regulated gears. Data from Estonia are only available from 2005 onwards

Table 5.1.3.4: Discard rates for cod 2004-2012 by gear category and area. An “r” in front of the gear type indicates regulated gears in accordance with Council Regulation (EC) 1098/2007. Gear types without an “r” are non-regulated gears. Data from Estonia are only available from 2005 onwards. Qualifier for discard estimates (DQI): A>66% of landings were covered with discard estimates, 33%>B<=66%, C<=33%.

Table 5.1.3.5 Cod landings (L) and discards (D) at ages 1-5 ('000) by gear category and area 2003-2012. Landing and discard estimates in tons are for all age range (1-9). An "r" in front of the gear type indicates regulated gears in accordance with Council Regulation (EC) 1098/2007 (see section 2.6). Gear types without an "r" are non-regulated gears. Data on age distribution were available for sub-areas A and B only. Data from Estonia are only available from 2005 onwards.

Figure 5.1.3.1 Catch and landings in tonnes of Baltic cod by sub-area and gear category 2003-2012. Upper panels represent regulated gillnets, lower panels regulated otter trawls in accordance with R(EC) 1098/2007 (see section 2.6). White bars show landings, grey bars discards.

#### 5.1.4 *Tor 1.d Catches (landings and discards) of non-cod species in weight and numbers at age by area, Member State and fisheries*

The information on landings and discards of major NON-COD species by the gear types and fishing areas are presented in the Table 5.1.4.1. The table 5.1.4.2 presents the available discard information for main pelagic species herring and sprat. According to the data uploaded by member states during the 2013 effort data call the discarding rate of pelagics is generally low. So for herring in area A only the regulated otter trawl without SPECON showed the consistent discard rates. However, according to quality index the discard data provided for this segment of fishery can be regarded as covered by a high proportion of landings with discard information (>66%) for 3 years only. Some discarding has been reported also for gillnet fishery in all areas. The coverage of landings with discard information however remained in most cases below 33%.

For sprat the consistent but low-level discarding was reported for gillnet fishery in area C.

Table 5.1.4.2. Discard rates for small pelagic species (herring and sprat) in 2004–2012 by gear category and area. An “r” in front of the gear type indicates regulated gears in accordance with Council Regulation (EC) 1098/2007. Gear types without an “r” are non-regulated gears. Data from Estonia are only available from 2005 onwards. Qualifier for discard estimates: A>66% of landings were covered with discard estimates, 33%>B<=66%, C<=33%.

### 5.1.5 ToR 1.e CPUE and LPUE of cod by area, fisheries and Member State

Although it was explicitly asked to analyse CPUE and LPUE time series of Baltic cod for gear categories which are in accordance with Council Regulation (EC) 2187/2005 only, the STECF EWG used the categories from the cod management plan to be consistent within the report and to provide respective advice.

The Tables 5.1.5.1, 5.1.5.2 and Figures 5.1.5.1-5.1.5.2 provide data on CPUE and LPUE by year and derogation as well as aggregated over countries. The CPUE figures in the table should only be considered indicative since estimated discard ratios depend on sampling intensity.

CPUEs and LPUEs were in general higher for otter trawls, demersal seines and pelagic trawls compared to gill nets. CPUEs and LPUEs varied considerably between countries. CPUE and LPUE aggregated over countries and years have shown a generally increasing trend in Areas A –C up to 2011, although CPUEs and LPUEs showed some inter-annual variability. In 2012 the both CPUE and LPUE trends indicated certain variability. In area A the CPUE in r-otter decreased somewhat from the level of 2011, while LPUE estimate was stable, indicating decreased discarding. For r-gill both CPUE and LPUE retained the level close to recent years. In area B CPUEs and LPUEs decreased somewhat in 2011 for r-gill and retained the level in r-otter. The relatively high CPUE and LPUE values in Areas B and C in the most recent years can be explained by the dynamics of Eastern Baltic cod stock (ICES, 2012; Tables 3.4.2.1 and 3.4.2.2).

The updated information on CPUE and LPUE by area, gear and Member States, made available to EWG1306 can be found on STECF website in the Appendix 4: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>. Analysis of CPUE and LPUE data broken down by area, gear and Member State revealed that the temporal dynamics of respective CPUE and LPUE values was rather similar. Below only the CPUE values from Baltic cod fishery by country and effort-regulated gears are considered.

Gillnet fishery (R- GILL) CPUE (g/kW\*days) of cod in r-gill gear fisheries by Member States, areas combined (Figure 5.1.5.3): In general, the cod CPUE values in the effort-regulated gillnet fishery did not reveal any clear trend in most of the Member States and fluctuated around 3000 (DNK), 1500 (SWE) and 1700 g/kW\*days (DEU) average values respectively during the period. The highest CPUE has shown LTU (around 4500 g/kW\*days in 2009-2012. Also TVA has shown high values since 2004. The POL CPUE index has increased from 1200 g/kW\*days in 2004 up to 3600 g/kW\*days in 2011-2012. Effort-regulated otter-trawl fishery (R-OTTER) CPUE (g/kW\*days) of cod in r-otter gear fisheries by Member States, areas combined (Figure 5.1.5.4): The overall CPUE trend in effort-regulated otter trawl fishery has been decreasing in the most recent period, mainly driven by the exceptional values in POL and LVA data sets (values of 2011 and 2010, respectively). The CPUE index of DNK increased 2.3 times from around 4000 up to 8000 g/kW\*days in 2004-2012. The DEU CPUE index was also increasing reaching maximum value above 7000 g/kW\*days in 2008 but then decreased to the level of 2006-2007. The LVA CPUE index was fluctuating significantly over the period, reaching 12000 g/kW\*days in 2010 but decreasing to 7000-8000 g/kW\*days in 2011-2012. The SWE CPUE index has increased steadily in 2004-2012 except in 2008 and 2010 exceeding 6000 g/kW\*days in 2012. The data available to the EWG of POL CPUE show the steady increase in 2004-2009, following sudden drop in 2011 and increase to the highest on record in 2012. Analyses of Cod CPUE by country have shown (Figure 5.1.5.5) that overall average CPUE of r-otter trawl fisheries has been almost twice bigger than that of r-gillnet fisheries CPUE in 2004-2012 period. Analyses of CPUE dynamics by areas A and B (Figure 5.1.5.5) show that CPUE (g/kW\*days) of cod in r-otter gear fisheries in area B was app. 60% times higher at average than in area A. It also can indicate at recently increased stock abundance causing the higher fishing efficiency in area B compared to the area A in 2004-2012.

Table 5.1.5.1 Baltic: Cod CPUE (g/KW\*days) by derogation, and year, 2004-2012 for areas A, B, C and 28.2.

| REG AREA COD | REG GEAR COD | SPEC CON | CPUE 2004 | CPUE 2005 | CPUE 2006 | CPUE 2007 | CPUE 2008 | CPUE 2009 | CPUE 2010 | CPUE 2011 | CPUE 2012 | CPUE 2010-2012 |

Figure 5.1.5.4 CPUE (g/kW\*days) of cod in regulated otter trawl fisheries by Member States, 2004-2012.

Figure 5.1.5.5. Average CPUE (g/kW\*days) of cod in r-otter trawl fisheries by Member States in area A and area B, in 2004-2012.

Ranked gear categories according to catches and landings of cod by sub-area can be found in Tables 5.1.5.3 and 5.1.5.4.

There are some differences in the dominating gear that are responsible for the cod catches. Throughout the period of observations the otter trawl fishery was dominant in Areas A and B with gillnet fishery as the second most important cod catching gear. In area C, gillnets were the major gears although the total amount of cod catches was low compared to areas A and B. The variation in the dominance of certain gear types between years is limited in Areas A and B. However, in areas C larger shifts occurred. In the Sub-area 28.2, only trawls and gillnets were involved in cod fishery during the period (except minor catch by pelagic trawls in 2003). The proportion between gears had been changing on annual basis without clear trend. According to available data, cod catches from unregulated gear types do not play a significant role.

Table 5.1.5.3 Ranked gear categories according to the proportional catches of cod 2003-2012, ascending ranking according to 2012.

### 5.1.6 ToR 2 Information on small boats (<8m by area)

Fishing effort and catches (landings and discards) of cod corresponding to vessels of length overall smaller than 8 m by gear and Member State are provided

Lithuania provided data from 2006; Latvia provided data from 2009; both until 2012. Estonia did not provide effort data for this fleet segment.

#### 5.1.6.1 Fishing effort of small boats by area, Member State and fisheries

According to provided information (Table 5.1.7.1.1), in 2003-2012 the highest fishing effort was deployed by Finland, Sweden and Poland (86% of total fishing effort in that fleet segment in 2012) (Figure 5.1.7.1.1).

The most of efforts were distributed between non regulated gill nets (44%), pots (31%) and regulated gill nets (16%) (Figure 5.1.7.1.2). Only 9% of fishing effort was deployed by other types of fishing gears.

The biggest fishing effort was deployed in the area C (62% in average comparing with total fishing effort); the lowest in the area A (10% in average comparing with total fishing effort) (Figure 5.1.7.1.3?). 28% of fishing effort was deployed in area B. Fishing effort in the Sub-division 28.2 consisted <1% of all fishing efforts in the area B only in 2012. Dynamics of fishing efforts in areas A, B, C has shown that from 2004 fishing effort in the area B significantly decreased; in the areas A, C fishing efforts fluctuated around its average.

### 5.1.6.2 Catches (landings and discards) of small boats by area, Member State and fisheries

STECF notes that discard observation and estimation are scarce for small boats. Using the information available, the estimated catches are believed to represent rather landings. According to provided information (Table 5.1.7.2.1) the biggest cod landings on average were taken with fishing gears named as “none” (34%) and regulated gill nets (34%) (Figure 5.1.7.2.1). Other important gears for cod landings were unregulated gill nets (23%) and regulated longlines (7%). By other types of fishing gears 2% of cod was fished only.

The landings of cod were taken almost equally from the areas A and B (Figure 5.1.7.2.2). The landings of cod in the area C consisted of less than 0.1% of total landings. The landings of cod in the area 28.2 consisted of 2% of all landings in the area B . the negative trend in total cod landings observed since 2005, reversed in 2012 mainly due to the increased landing figures in area B. Comparison of The most recent period (2010-2012) can be characterized by oncrease of the share of non-regulated gillnet catches . The share of r-gill remains unchanged in 2011-2012 (Figure 5.1.7.2.1. Landings of cod corresponding to vessels of length overall less than 8 m consist of 4.2% of total catches in the area A, 1.6% - in the areas B+C and 2.2% - for all Baltic.

Figure 5.1.7.2.1 Distribution of cod landings taken by different gear types in 2003 – 2012.

Figure 5.1.7.2.2 Cod landings and dynamics (2003 – 2012) in the areas A and B.

### *5.1.7 ToR 3 Fishing effort (days at sea) uptake analysis, by Member State, gear type and fishing area.*

The EWG 13-06 was given the task of quantifying the evolution of the calculated maximum effort allocated to the cod fleet (ceiling of days using regulated gear types) in relation to the effort actually used by that fleet and was asked to highlight possible shifts between métiers.

The uptake of days at sea against the available days at sea by Member state and area for regulated and nonregulated gear types in 2008-2012 is presented in the Table 5.1.7.1. and on the Figure 5.1.7.1. – 5.1.7.3. The Uptake of days at sea with regulated gears remained clearly below the available maximum in all areas and Member States. The average uptake of available days at sea over the time period \2008-2012 remained in the range of 36-38% in area A, 34-47% in the area B and 53-83% for the areas A and B combined. Only one Member State exceeded the allowed limit for regulated gears areas A and B combined in 2011 (Figure 5.1.2.3). No clear trend in average uptake could be revealed over the observed period.

Table 5.1.7.1. Uptake of available days at sea by Member state and area for regulated and nonregulated gear types in 2008-2012.

### 5.1.8 ToR 4 Evaluation of fully documented fisheries FDF

#### 5.1.8.1 Fishing effort of FDF vessels by area, Member State and fisheries in comparison with fisheries not working under FDF provisions

Only Denmark has reported FDF fisheries in the Baltic in 2012 in both areas A (Western Baltic) and B (Eastern Baltic). Table 5.1.8.1.1 provides the information on effort deployed in fully documented fishery, which was made available to EWG 13-06. The data were provided only by Denmark for the Areas A and B by gear types for 2012. The fully documented fishery represented on average 2.3% of the total Danish regulated effort deployed in both areas A and B in 2012. FDF share in overall effort used with respective gear types was generally below 1%. Only in regulated demersal seine the share of FDF reached 37% in area A.

Table 5.1.8.1.1 Danish fishing effort (kWdays at sea) in Fully Documented Fishery (FDF) and Non-FDF effort in 2012 by areas A (Western Baltic) and B (Eastern Baltic).

| Area | Specon | MS  | REG Gear COD | FDF Effort | All Non-FDF effort | %    |

#### 5.1.8.2 Catches (landings and discards) of cod and other species taken by FDF fisheries by area, Member State and fisheries in comparison with fisheries not working under FDF provisions

The reported Danish landings of cod from the fully documented fishery with regulated gears amounted to 333 t in area A and 406 t in area B (total 739 t) in 2012 (Table 5.1.3.5.). The landings from fully documented fishery covered 4% from the reported cod landings in these areas in 2012. The discards from FDF are presented in the Section 5.1.3 of the present report. FDF reported about 42 t of cod discards in 2012.

#### 5.1.8.3 Comparative analysis of cod selectivity by FDF fisheries and non-FDF fisheries

STECF 13-06 discussed its new ToR to compare cod selectivity in FDF and non-FDF fisheries. STECF EWG 13-06 interpreted the task as to compare age specific fishing patters (partial Fs by fishery and age group). As a first step into the requested analyses, STECF EWG 13-06 estimated and presents the landing and discards at age by FDF and non-FDF fisheries. STECF EWG 13-06 noted that any attempt to compare the selectivity of FDF and non-FDF fisheries implies that Member States sampling and raising procedures to estimate the specific age compositions of landings and discards are specific for these fisheries. Since the data of Danish FDF in 2012 were made available, the EWG decided to evaluate the age composition of landings and discards of comparative gear types from FDF and non FDF.

### 5.1.8.3.1 Cod selectivity by FDF fisheries and non-FDF fisheries of the Western Baltic cod

Table 5.1.8.1 and Figure 5.1.8.1 provide the overview of age composition of landings taken with regulated gears in FDF and non-FDF in Area A (Sub-divisions 22-24, Western Baltic cod).

The main gears in the area A (r-otter and r-demersal seine) show now difference in age composition of cod landings from FDF and non-FDF fisheries. In both gears landings are dominated by the age groups 3-5. However, the age composition of discards shows certain fisheries-dependent pattern in case of r-otter, where the share of age group 2 in non-FDF significantly exceeded the respective value of FDF. In case of r- demersal seine the discard structure of both fisheries was identical.

The same age groups dominate also the age composition of discards and thus hint at a clear difference in age composition in age range 2-5. The age composition of landings from non-FDF fisheries were shifted to the younger age groups indicating at the substantial difference in selectivity. However the data should be taken with caution because the possible effect of differences in age reading in Area s A and B.

Table 5.1.8.1 Age composition of cod landings and discards in FDF and non-FDF in area A (Western Baltic) in 2012, t.

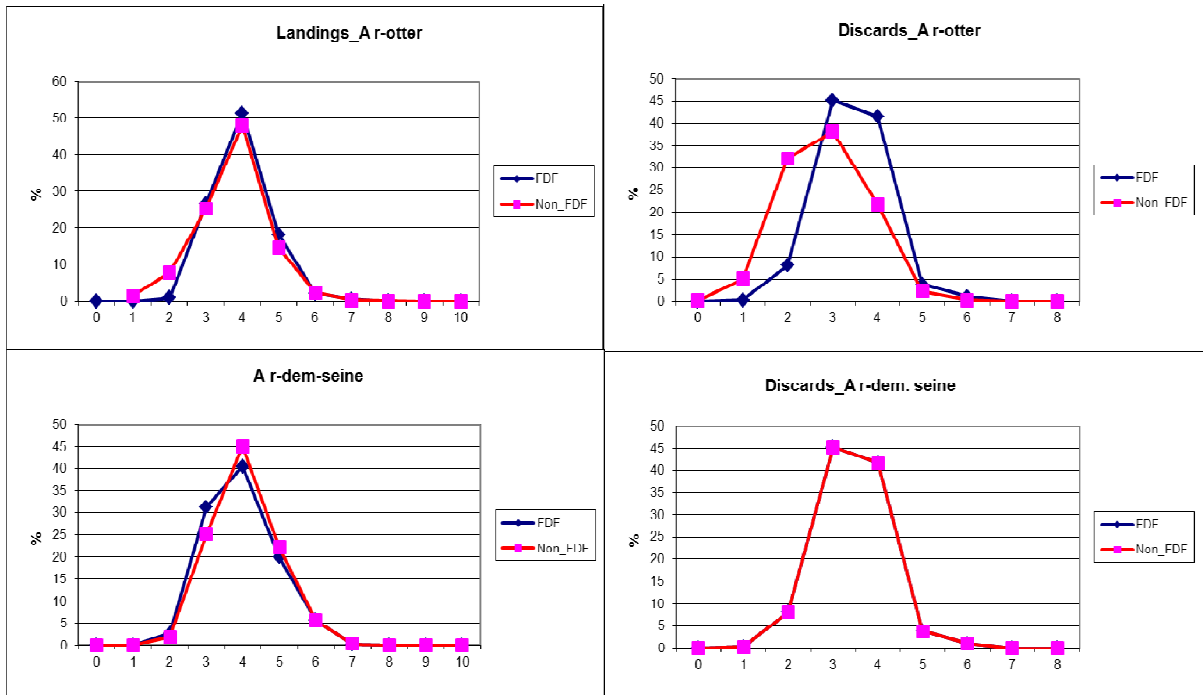

Figure 5.1.8.1 Age composition of cod landings and discards from Fully Documented Fishery (FDF) and non-FDF in area A in 2012.

### 5.1.8.3.2 Cod selectivity by FDF fisheries and non-FDF fisheries of the Eastern Baltic cod

Table 5.1.8.2 and Figure 5.1.8.2 provide the overview of age composition of landings taken with regulated gears in FDF and non-FDF in Area A (Sub-divisions 25-28, Eastern Baltic cod). The main comparable gears (r-otter and r-gill) show a clear difference in age compositions over the ages 3-5. The age composition of landings in non-FDF was shifted to the younger age groups in both gear types indicating at the substantial difference in selectivity. The main difference is in age group 3, which is significantly higher represented in the non-FDF. The similar pattern can be observed in the discard composition. However the given results should be taken with caution because the possible effect of differences in age reading in areas A and B. Differently from the area A, the age reading of cod from non-FDF in area B is executed in a number of institutes, with distinct differences in interpretation of cod otoliths.

Table 5.1.8.2 Age composition of cod discards in FDF and non-FDF in area B (Eastern Baltic) in 2012, t.

Figure 5.1.8.2. Age composition of cod landings and discards from Fully Documented Fishery (FDF) and non-FDF in area B in 2012.

### 5.1.9 ToR 5 Spatio-temporal patterns in effective effort by area and fisheries

According to available effort data in units of fished hours, the spatial distribution of deployed otter trawl effort (Figure 5.1.9.1) did not show any particular trend over the time series. During 2003–2005 period the highest fishing effort concentration was observed in areas of Bornholm Deep and in the northern part of Polish EEZ. However, the effort seems to be distributed more evenly across the areas A-C after 2006.

The gillnet effort has been concentrated in areas A and B without any clear temporal pattern (Figure 5.1.9.2). During 2003–2012 period the biggest fishing efforts concentration was in the Polish coastal areas. The Figure 5.1.9.3 shows the general distribution pattern of another big contributor of effort in the Baltic – the pelagic trawls. The distribution pattern indicates the high concentration of effort in the areas of Bornholm and Gdansk Deep as well as in the Sub-division 28.2 in 2003-2007.

The pelagic trawl effort was distributed rather evenly in the most recent years. This can be explained with northward distribution of sprat stock in recent years (ICES, 2012).

A full set of effort distribution figures, will be made available on the web page of the EWG 13-06.

#### 5.1.10 ToR 6 Remarks on quality of catches and discard estimates

Discard estimates were available from all Baltic Member States except for Finland. This country, however has landed small quantities of the eastern cod stock (approximately 1% of the total landings). It seems that the sampling intensity, particularly in passive gears, was generally lower as compared to active gears. This might imply that even if all major métiers were sampled, the discard estimate is an underestimate compared to the real discard. Therefore, variation in discard figures from year to year must be taken with caution and may not reflect the true exploitation pattern of the fishery. The EU Data Collection Framework (DCF) defines which métiers (Level 6) are to be sampled in a country following the rules of the fisheries métiers ranking system. The sampling strata include also Baltic ICES Sub-divisions (not ICES rectangles) and months. Independently of the uncertainties in the discard estimates available to the STECF EWG, the changes in discard level reflect relatively well the year-classes strength of the eastern Baltic cod stock, which is in particular evident for the active gears (see Figure 5.1.3.1). Also discard ratio estimates for the Member States for the same year and fishing gears are close and follow the same trends across years studied.

#### 5.1.11 ToR 7 Estimation of partial fishing mortalities of cod by area, Member State and fisheries and correlation between partial cod mortality and fishing effort by area, Member State and fisheries

##### 5.1.11.1 Western Baltic cod in area A

The STECF EWG 13-06 presents partial fishing mortalities by fisheries using regulated gears and Member States in relation to the estimated fishing mortality by ICES (2013) and the catches (s. Tab.

5.1.11.1.1), landings (s. Tab. 5.1.11.1.2) and discards volumes (s. Tab. 5.1.11.1.3), respectively. The full list of partial fishing mortalities of all fisheries can be downloaded from the EWG's web page. The anticipated trend in fishing mortality and fishing effort in units of kW days at sea as derived from the cod plan is also presented in upper parts of such tables. The sustainable exploitation target is defined as  $F_{msy}=0.26$ . The trends in fishing effort in units of kWdays at sea of the relevant fisheries are also presented in Table 5.1.11.1.1-3. The presented parameters  $r$  (value of Pearson's coefficient of correlation), numbers of points considered as well as a  $p$  value to quantify the statistical significance ( $\leq 0.05$ ) allow conclusions about the quality of the correlation between the partial  $F$  and fisheries specific fishing effort. The correlations between partial  $F$  and fishing effort are shown in Fig. 5.1.11.1.1.

It can be concluded from the estimated  $F$  in 2012 (Tab. 5.1.11.1.1) that the stock is subject to overfishing and that the annual  $F$  reductions are not following the plan. Discard mortality is generally low (Tab. 5.1.11.1.3). In recent years the listed effort regulated fisheries do contribute more than 82% to the total fishing mortality.

STECF EWG 13-06 notes that the correlations between the summed partial  $F$ s of regulated fisheries for catch and landings of the major fisheries and their estimated fishing efforts are significant. The correlation between the rather low partial  $F$ s of discards and effort is not significant, but discarding is considered a minor issue in the Western Baltic anyway. The partial  $F$ s of most of the Member States fisheries using regulated gears are also closely correlated with their specific effort estimates in kW days at sea. This indicates that effective fisheries management by fishing effort in units of kWdays at sea appears possible, also as an auxiliary measure to catch constraints and technical measures.

Table 5.1.11.1.1 Western Baltic cod in area A. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 assessment, as well as partial Fs based on catches of fisheries using regulated gears. The lower left part lists the estimated partial F based on estimated catches from the regulated fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.1.11.1.2 Western Baltic cod in area A. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 assessment, as well as partial Fs based on landings of fisheries using regulated gears. The lower left part lists the estimated partial F based on landings from the regulated fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

| 2008 moving reference year annual F reductions by 10 percent until F<=0.6, Fmsy=0.26 |           |            |          |       |       |       |       |       |       |       |       |       | Effort kWdays at sea  |         |          |         |         |         |         |         |         |         |           |         |       |       |    |      |  |  |

Table 5.1.11.1.3 Western Baltic cod in area A. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 assessment, as well as partial Fs based on discards of fisheries using regulated gears. The lower left part lists the estimated partial F based on landings from the regulated fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

| 2008 moving reference year annual F reductions by 10 percent until $F_{c=0.6}$ , $F_{msy}=0.26$ |             |        |            |       |       |       |       |       |       |       |       |       | Effort kWdays at sea  |                |         |         |          |         |         |         |         |         |         |         |          |         |         |         |         |         |         |         |

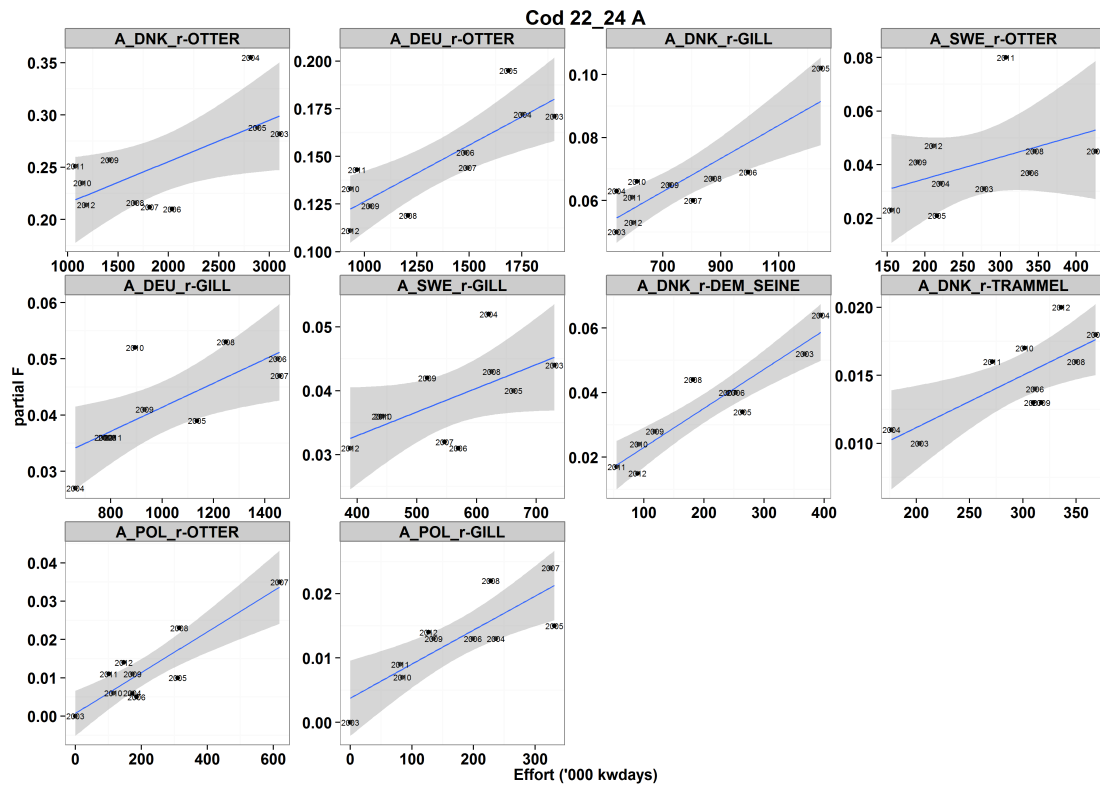

Fig. 5.1.11.1 Western Baltic cod in area A. Estimated F trajectories from the management plan and the ICES 2013 assessment, as well as partial Fs for catches of major fisheries. Note that the panel called combined fleets includes all regulated and unregulated fisheries and that the trends of the fisheries are not separated by special conditions.

### 5.1.11.2 Eastern Baltic cod in area B

The STECF EWG presents partial fishing mortalities by fisheries using regulated gears and Member States in relation to the estimated fishing mortality by ICES (2012) and the catches (s. Tab. 5.1.11.2.1), landings (s. Tab. 5.1.11.2.2) and discards volumes (s. Tab. 5.1.11.2.3), respectively. The full list of partial fishing mortalities of all fisheries can be downloaded from the EWG's web page. The anticipated trend in fishing mortality and fishing effort in units of kW days at sea as derived from the cod plan is also presented in upper parts of such tables. The sustainable exploitation target is defined as  $F_{msy}=0.46$ . The trends in fishing effort in units of kWdays at sea of the relevant fisheries are also presented in Tables 5.1.11.2.1-3. The presented parameters  $r$  (value of Pearson's coefficient of correlation), numbers of points considered as well as a  $p$  value to quantify the statistical significance ( $\leq 0.05$ ) allow conclusions about the quality of the correlation between the partial  $F$  and fisheries specific fishing effort. The correlations between partial  $F$  and fishing effort are shown in Fig. 5.1.11.2.1.

It can be concluded from the estimated  $F$  in 2012 (Table 5.1.11.2.1) that the stock is sustainably exploited and that the annual  $F$  reductions had been following the plan since 2008. According to Eero et al. (2012), the stock recovery is due to increased productivity (recruitment) and improved control over catches. Discard mortality is generally low. Since 2009, the listed effort regulated fisheries do contribute 80% or more to the total fishing mortality.

STECF EWG 13-06 notes that the correlations between the summed partial  $F$ s for catch and landings of the many effort regulated fisheries and their estimated fishing efforts are highly significant. There is no significant correlation between the partial  $F$ s and fisheries specific discards, which constitute minor parts to the overall fishing mortality. The partial  $F$ s of most of the Member States fisheries using regulated gears are also closely correlated with their specific effort estimates in kW days at sea. This indicates that effective fisheries management by fishing effort in units of kWdays at sea appears possible, also as an auxiliary measure to catch constraints and technical measures.

Table 5.1.11.2.1 Eastern Baltic cod in areas B and C. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 assessment, as well as partial Fs based on catches of fisheries using regulated gears. The lower left part lists the estimated partial F based on estimated catches from the regulated fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.1.11.2.2 Eastern Baltic cod in areas B and C. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 assessment, as well as partial Fs based on landings of fisheries using regulated gears. The lower left part lists the estimated partial F based on estimated catches from the regulated fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.1.11.2.3 Eastern Baltic cod in areas B and C. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 assessment, as well as partial Fs based on discards of fisheries using regulated gears. The lower left part lists the estimated partial F based on estimated catches from the regulated fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

| 2008 moving reference year annual F reductions by 10 percent until F<=0.3, Fmsy=0.46 |             |        |            |       |       |       | Reference year |       |       |       |       | Effort kW days at sea |   |                |          |          |          |           |         |         |         |         |         |         |         |        |       |   |  |  |  |

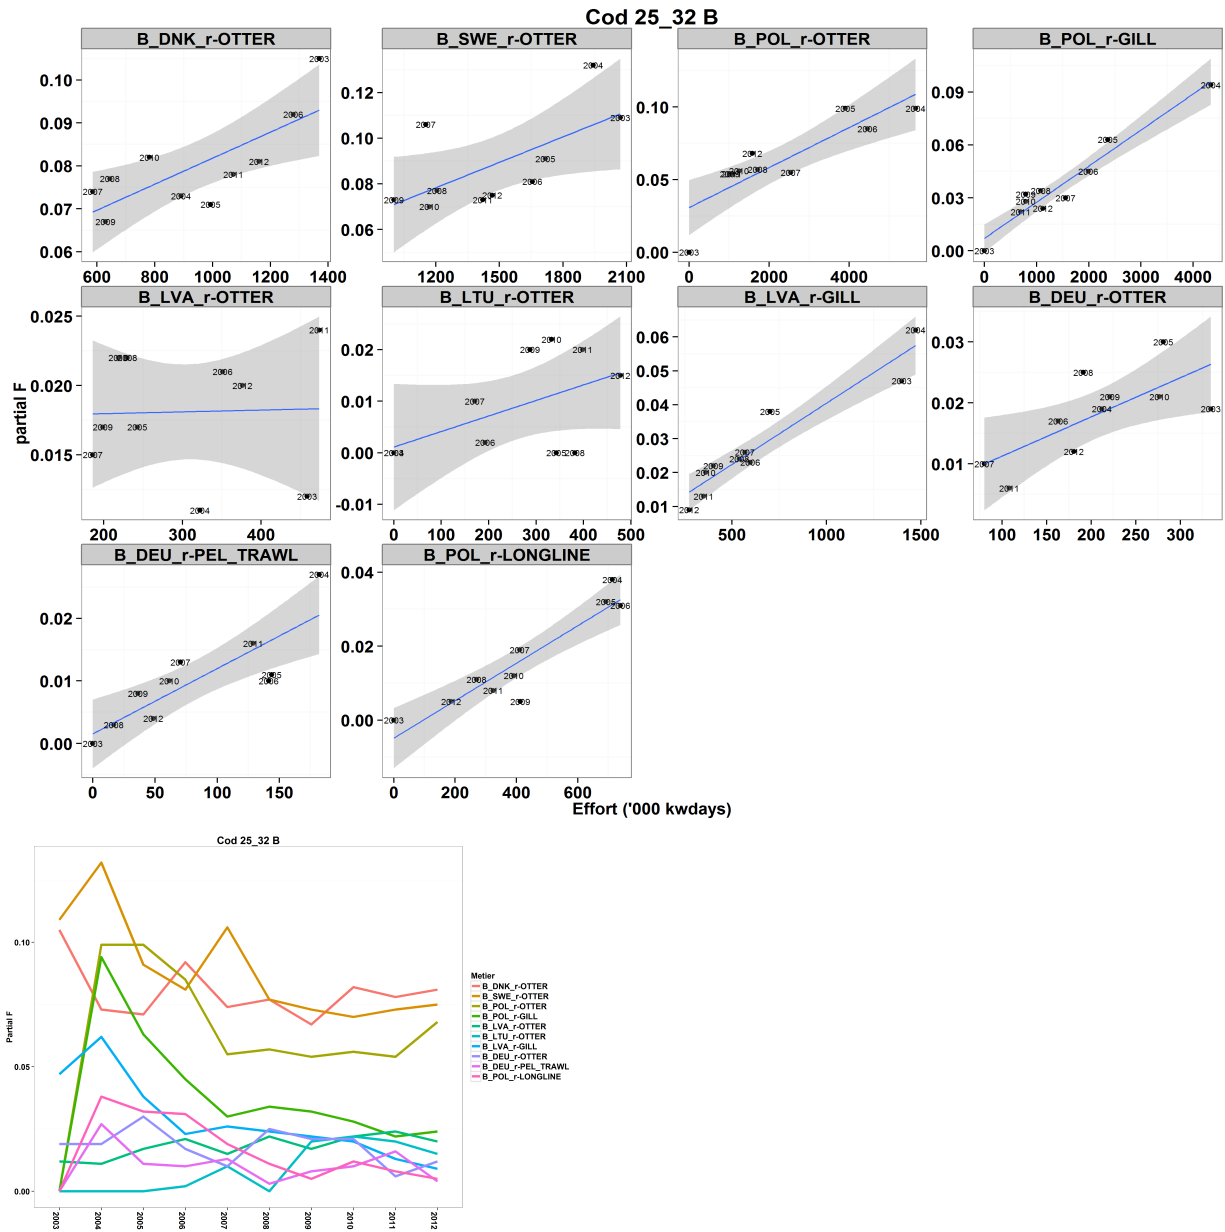

Fig. 5.1.11.2.1 Eastern Baltic cod area B and C. Estimated  $F$  trajectories from the management plan and the ICES 2013 assessment, as well as partial  $F$ s for catches of major fisheries. Note that the panel called combined fleets includes all regulated and unregulated fisheries and that the trends of the fisheries are not separated by special conditions.

#### *5.1.12 ToR 8 Spatio-temporal pattern in standardized catchability indices for cod*

Due to time constraints STECF EWG 13-06 deferred its analysis of updated spatio-temporal pattern in catchability indices to its forthcoming STECF EWG 13-13 meeting (7-11 October 2013, Barza d'Ispra, Italy). STECF EWG 13-06 concluded that this analyses shall cover a detailed check to ensure that the survey indices used are subject to single log-transformation.

STECF EWG 13-06 refers to the analyses presented in the report STECF-12-16 published in 2012.

## 5.2 Kattegat effort regime evaluation in the context of Annex IIA to Council Regulation (EC) No 57/2011)

### 5.2.1 ToR 1.a Fishing effort in kWdays, GTdays, kW and number of vessels by Member State and fisheries

Trends in effort by the new cod plan gear groups and by country are shown in Table (5.2.1.1). In 2012 70% of the total effort was deployed by gears that are under effort regulation in the cod plan, dominated by the TR2 fishery, and the total effort in Kattegat has decreased by 42% between 2003 and 2012. The effort deployed by regulated gears has decreased by 54% since 2003 but between 2011 and 2012 it increased by 11% (266 406 kW\*days). The largest part (233 353 kW\*days) of the increase is found in the Danish TR2 fishery, which is under the derogation CPart13c from 2010 onwards. The Danish TR2 fishery effort decreased by 35% between 2003 and 2006 and has since then remained quite stable. The Swedish regulated TR2 effort has decreased by 81% since 2003, partly due to a move towards the unregulated CPart11 (using a 35mm Nephrops sorting grid, introduced in 2003) which constituted 68% of the Swedish TR2 effort in 2012 and partly to an overall decrease in effort (41% since 2003).

The effort carried out by unregulated gears, including the Swedish Nephrops sorting grid under the derogation CPart11, has increased from 776 555 kW\*days in 2003 to 1 158 146 kW\*days in 2012, an increase by 49% (Table 5.2.1.3).

Table 5.2.1.1 Kattegat: Trend in nominal effort (kW\*days at sea) by regulated gear group and country. 2003-2012. The gear category TR2 does not include effort carried out under the derogation CPart11 (from 2009 onwards) or IIA83b (2004-2008).

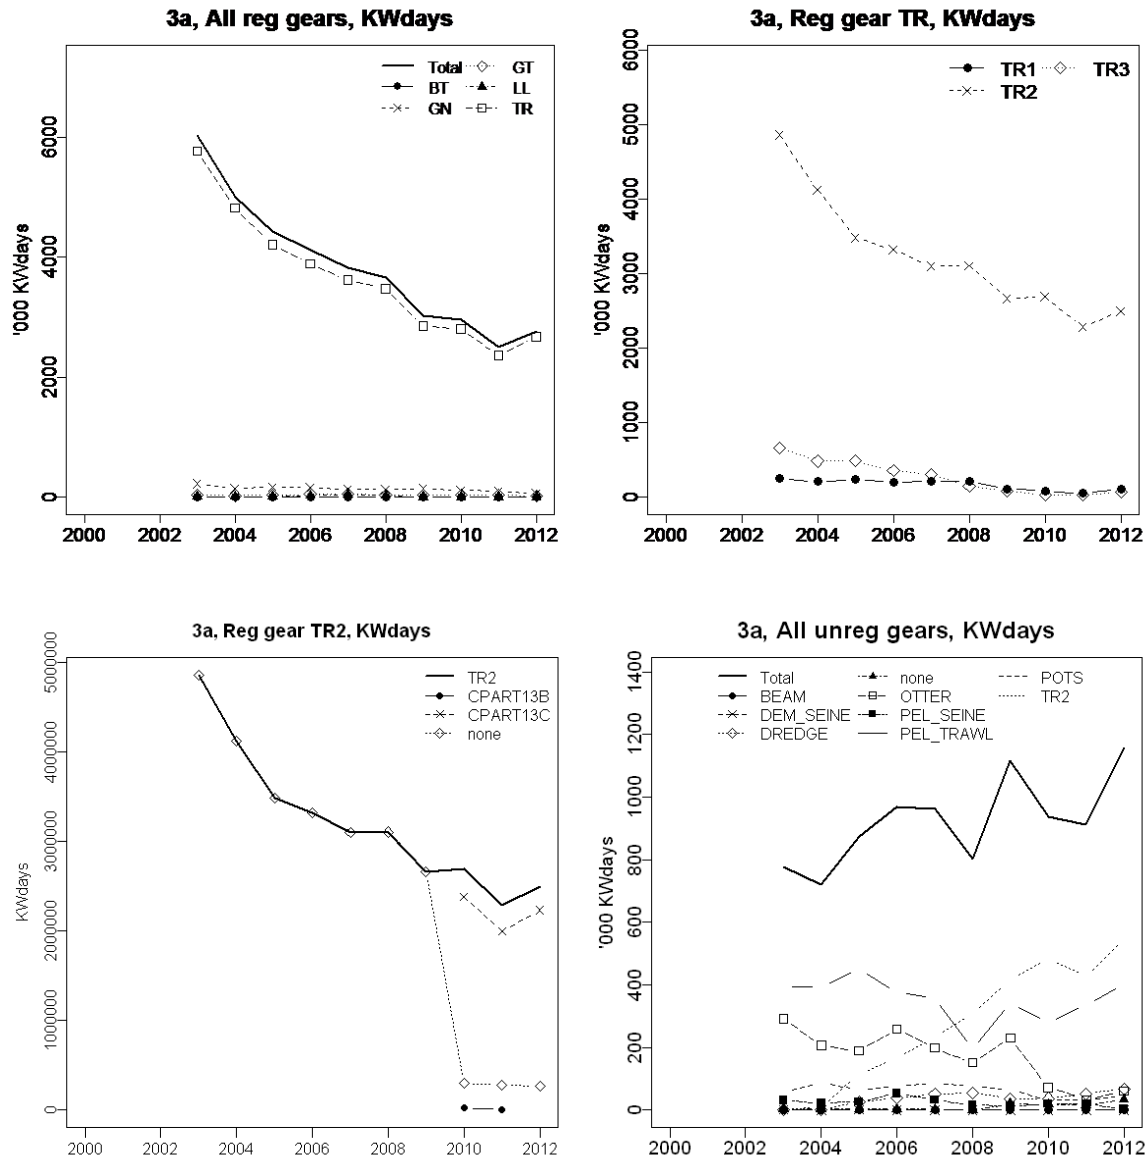

Figure 5.2.1.1. Kattegat: Top left: Trend in nominal effort (Kw \*days at sea) by regulated gear types, 2003-2012. TR=Demersal trawl, BT=Beam trawl, GN=Gillnet, GT=Trammel net, LL=Longline. Note that the derogations CPart11 and IIA83b are not included in the TR gear category since they are considered unregulated.

Top right: effort by gear types within gear group TR; TR1=mesh size  $\geq 100$ mm; TR2=mesh size  $\geq 70, \leq 100$ mm; TR3  $\geq 16, \leq 32$  mm. The derogations CPart11 and IIA83b are not included in the TR2 category.

Bottom left: Effort by derogation within gear type TR2. Note that the derogations CPart11 and IIA83b are not included in the TR2 category.

Bottom right: effort by unregulated gear categories. The TR2 effort here is the effort carried out under the derogations IIA83B (2003-2008) and CPart11 (2009-2012).

The effort deployed in Gross tonnage days (GTdays), number of vessels and fishing capacity in kW by metier are not described in this report but can be found on the STECF EWG 13-06 website under the Final Report section: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>:

Relative changes in data since last submissions:

Since previous year's data submission Sweden has not made any changes, while Denmark has revised all data, both catch and effort, for the whole time series. The relative change in nominal effort data is presented in Table 5.2.1.4. The largest relative changes in effort are found in unregulated gears that constitutes a small part of the deployed effort in Kattegat in absolute values.

Table 5.2.1.4. Relative change in nominal effort (kW\*days at sea) compared to the previous year's data submissions, by country, gear and vessel length.

### 5.2.1.1 Uptake of effort baseline

The uptake of effort baselines is presented on Figure 5.2.1.1.1). Care must be taken in the interpretation of this figure, for a number of reasons, including e.g: i) the baseline displayed here is extracted from the TAC and quotas regulations nr 43/2009, 53/2010, 57/2011, 44/2012 and 40/2013, and do not take into account the effort buyback performed by Member states as part of Article 13 and/or other agreements. This information is sometimes publicly available for some Member States, but not for all and STECF EWG 13-06 has not been provided with this information specifically; ii) as described in section 4, the

effort information provided to STECF EWG 13-06 by a number of Member States is calculated in calendar days, whereas the actual regulation of effort uptake is based on 24h periods, which can lead to some differences especially in coastal fisheries; iii) STECF data are calculated by calendar year whereas the effort baselines apply from February to January.

All regulated gear categories in Kattegat are well below the effort base line apart from the TR2 fishery, which is the predominant fishery in the area. The TR2 overshoot is probably due a combination of the points mentioned above and particularly the fact that the Danish TR2 fishery, which constituted 89% of the total TR2 nominal effort 2012, is entirely under the derogation CPart13c which allows effort to be bought back by the Member State.

Figure 5.2.1.1.1 Management area 3a, Kattegat. Uptake of effort 2000-2012 by regulated gear category. Solid line=deployed effort in kW\*days at sea, dashed line=Effort base line from the TAC and quota regulation for the years 2009-2013.

### 5.2.2 ToR 1.b and c Catches (landings and discards) of cod and non-cod species in weight and numbers at age by fisheries

STECF EWG 13-06 presents the requested cod and non-cod species in weight by fisheries. Age specific data are not presented here but are available on the internet page of the STECF EWG 13-06: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

The total landings of cod in Kattegat, all gears included, have decreased substantially from 2036 tonnes in 2003 to 84 tonnes in 2012, whereof 77 tonnes were taken by regulated gears and 87% were taken by the

regulated TR2 gear category. The cod landings taken by gill nets and trammel nets were very small, less than 1 tonne in 2012. The majority of the cod discards are also generated by the TR fishery, 122 tonnes in 2012. The landings of non-cod species in Kattegat have also decreased steadily since 2003, apart from the landings of Nephrops, the main target species in Kattegat in recent years, which have remained quite stable through the whole time series. The landings and discards of the most important species for regulated gears are shown in Table 5.2.2.1a and b.

Pelagic fisheries are not sampled for discards in Kattegat and it is therefore not possible to give a meaningful estimate of pelagic discards. Discards in pelagic fisheries are to the large extent caused by slipping (discarding of the whole catch), which is very difficult to sample since the frequency of slipping events is believed to vary largely between seasons and areas and could also potentially be subject to a significant observer effect.

For the first time the STECF EWG 13-06 report includes an index of discard coverage DQI, by year, gear category, derogation and species, which is presented in Table 5.2.2.9. The criteria of the index are described in section 4.5.

Table 5.2.2.1.a. Kattegat landings (L), discards (D) and discard rate (R) of cod (COD), Nephrops (NEP), plaice (PLE), sole (SOL) and whiting (WHG) by regulated gear category and derogation 2003-2007. The derogations CPart11 and IIA83B are considered unregulated and are not included. Landings of the most important species by unregulated gears are shown in Table 5.2.2.3-6.

Figure 5.2.2.2. Landings (white) and discards (grey) in tonnes by the regulated gear categories TR1, TR2 and TR3 and by species in Kattegat 2005-2012. The derogations CPart11 and IIA83b are not included in the TR2 gear category above, since they are considered unregulated.

Table 5.2.2.3 Unregulated gears, landings (t) of cod in Kattegat 2003-2012. Discards for unregulated gears are not sampled for discards in Kattegat except for the Swedish sorting grid, derogation CPart11. The discards of cod for the derogation CPart11 in 2012 were 12,1 tonnes.

Relative changes in catch data since last submissions:

Since previous year's data submission Sweden has not made any changes, while Denmark has revised all data, both catch and effort, for the whole time series. The relative change in landings and discards for the most important species is presented in Table 5.2.2.7 and 5.2.2.8 respectively.

Table 5.2.2.7. Relative change in landings compared to the previous year's data submissions, by country, regulated gear category and vessel length, for cod (COD), Nephrops (NEP), plaice (PLE) and sole (SOL).

Table 5.2.2.9. Kattegat Index of Discard Coverage (DQI) for cod (COD), Nephrops (NEP), plaice (PLE), sole (SOL) and whiting (WHG) by regulated gear category and derogation 2003-2012. The derogations CPart11 and IIA83B are considered unregulated and are not included. A≥67% of landings are covered with discard estimates, B≥34% and ≤66% of the landings are covered with discard estimates, C≤33% of the landings are covered with discard estimates.

### 5.2.3 ToR 1.d CPUE and LPUE of cod by fisheries and Member States

STECF EWG 13-06 presents the estimated trends in CPUE and LPUE for cod, plaice and sole in figures and tables below. CPUE and LPUE by gear and Member State is not presented in this report but can be found on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

The very high CPUE values for gillnets (GN1) and trammel nets (GT1) in 2003 and 2004 are due to a very high discard rate for those gears and is believed to be the result of poor discard estimates, which is also reflected in the Index of Discard Coverage (shown in Table 5.2.2.9).

Figure 5.2.3.1 Left: CPUE (g/kWday) of cod by gear category (no special conditions) 2003-2012. Right: LPUE (g/kWday) of cod by gear category 2003-2012. CPUE and LPUE for the derogations CPart11 and IIA83b are not included in the TR2 gear category in this figure. Note that the scale on the y-axis differs between the panels.

Figure 5.2.3.2 Left: CPUE (g/kWday) of plaice by gear category (no special condition) 2003-2012. Right: LPUE (g/kWday) of plaice by gear category 2003-2012. CPUE and LPUE for the derogations CPart11 and IIA83b are not included in the TR2 gear category in this figure. Note that the scale on the y-axis differs between the panels.

Figure 5.2.3.3 Left: CPUE (g/kWday) of sole by gear category (no special condition) 2003-2012. Right: LPUE (g/kWday) of sole by gear category 2003-2011. CPUE and LPUE for the derogations CPart11 and

IIA83b are not included in the TR2 gear category in this figure. Note that the scale on the y-axis differs between the panels.

Table 5.2.3.1. CPUE (g/kWd) of cod (COD), Nephrops (NEP), sole (SOL) and plaice (PLE) by regulated gear and derogation in Kattegat 2003-2012. The derogation CPart11/IIa83b is not included in the TR2 CPUE, since it is considered an unregulated gear.

### 5.2.4 ToR 2 Rank regulated gear groups on the basis of catches expressed both in weight and in number of cod

STECF EWG 13-06 presents the gear groups ranked to their relative importance of catches and landings of cod, Nephrops, plaice and sole in 2012. The TR2 category dominates the fishery of all listed species in recent years.

Table 5.2.4.1 Ranked regulated gear categories according to the proportional catches of cod, Nephrops, plaice and sole 2003-2012. Note that the derogations CPart11 and IIA83b are not included in the TR2 category below, since they are considered unregulated.

## 5.2.5 ToR 3 Information on small boats (<10m)

### 5.2.5.1 Fishing effort of small boats by Member State

Vessels <10m LOA are exempted from the effort regulation in Kattegat with regard to the cod plan. Tables 5.2.5.1.1 and 5.2.5.1.2 show the nominal effort (kW\*days at sea) of vessels <10m LOA in Kattegat. In 2012 the nominal effort deployed by small vessels constituted 12% of the total effort in the area. The Danish effort for this group of vessels has decreased in general since 2005 and between 2011 and 2012 except for pots, that increased slightly between 2011 and 2012 but deploy a very small amount of effort. The German effort in this vessel category is insignificant. The Swedish effort of small vessels has increased by 12% since 2009.

Table 5.2.5.1.1 Nominal effort (kW\*days at sea) deployed by vessels <10m LOA in Kattegat 2003-2012. Swedish effort data for vessels <10m LOA is not considered reliable before 2009 and are excluded from the table.

### 5.2.5.2 Catches (landings and discards) of cod and associated species by small boats by Member State

Landings of cod, Nephrops, plaice and sole by vessels <10m LOA in Kattegat are presented in Table 5.2.5.2.1 and the percentage of the total landings of the same species in Table 5.2.4.2.2. The landings by small vessels show largely the same pattern as the total landings and the percentage portions have remained fairly stable through the time series.

Table 5.2.5.2.1 Landings (t) of cod, plaice, sole and Nephrops by vessels <10m LOA, 2003-2012.

#### 5.2.6 *ToR 4 Evaluation of fully documented fisheries FDF*

Since there are no FDF fisheries in Kattegat, ToR 4 could not be addressed.

#### 5.2.7 *ToR 5 Spatio-temporal patterns in effective effort by fisheries*

Figures 5.2.7.1 to 5.2.7.3 show the effective effort in fishing hours carried out by the gear categories TR2, TR1 and GN1 respectively.

It should be noted that Kattegat is a rather small management area to find any changes in the pattern of the distribution of effort between the gears using statistical rectangles. A smaller grid would be required in order to pick up any spatial changes in this area.

Figure 5.2.7.1 Spatial distribution of effective effort (fishing hours) for the gear category TR2 including the unregulated CPart11 and IIA83b in Kattegat 2003-2012.

Figure 5.2.7.2 Spatial distribution of effective effort (fishing hours) for the gear category TR1 in Kattegat 2003-2012.

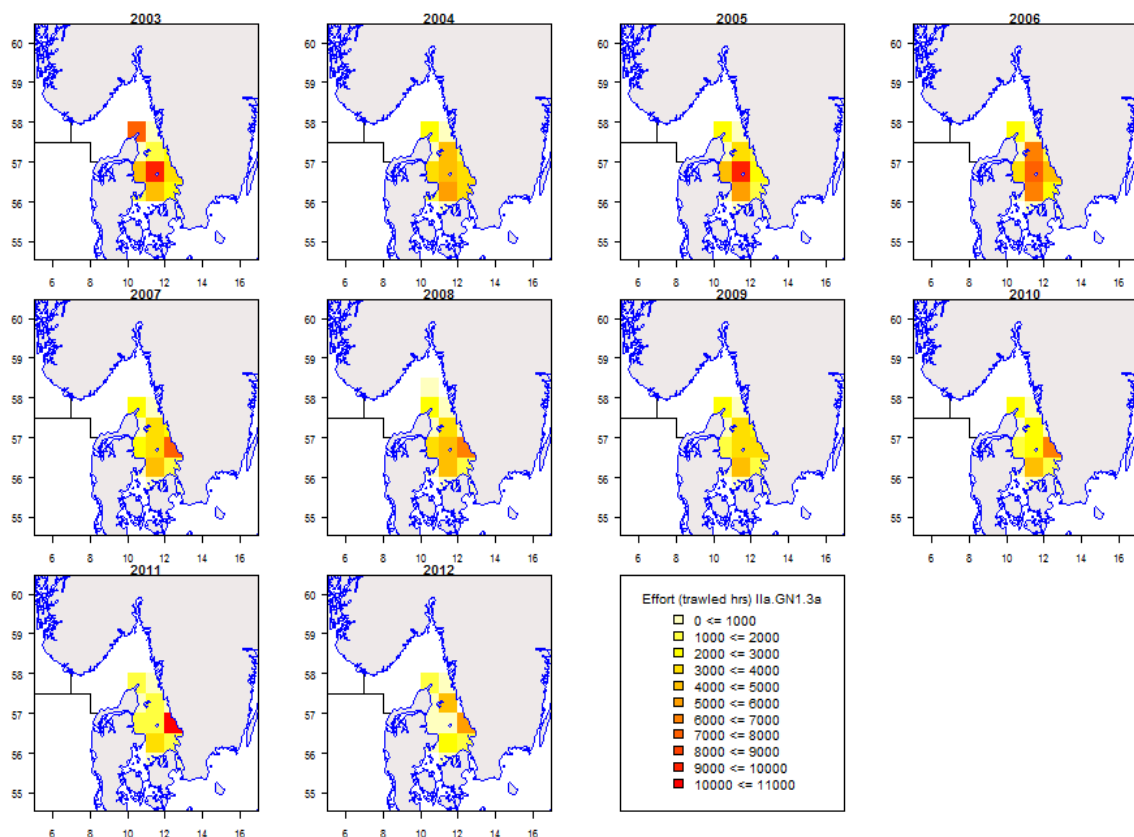

Figure 5.2.7.3. Spatial distribution of effective effort (fishing hours) for the gear category GN1 in Kattegat 2003-2012.

### 5.2.8 ToR 6 Remarks on quality of catches and discard estimates

The STECF EWG 13-06 expresses overall high confidence in the data and results.

### 5.2.9 ToR 7 Estimation of conversion factors to be applied for effort transfers between regulated gear groups

STECF EWG 13-06 presents the estimated cod CPUE and respective effort transfer factors between donor and receiving regulated gear groups in Table 5.2.8.1

Table 5.2.9.1 Cod CPUE and respective effort transfer factors between donor and receiving regulated gear groups based on averages 2010-2012. Red cells are indicated to be imprecise due to lack of adequate discard information. Yellow cells indicate sufficient sampling and green cells good sampling information.

*5.2.10 ToR 8 Correlation between partial cod mortality and fishing effort by Member State and fisheries*

STECF EWG 13-06 noted that ICES did not provide an analytical assessment of cod in the Kattegat in 2013. STECF EWG 13-06 is therefore unable to deal with the ToR 8.

*5.2.11 ToR 9 Trends in fishing mortality and fishing effort by Member State and fisheries with regards to the cod plan (R (EC) No 1342/2008) provisions, in particular with regard to Article 13*

STECF EWG 13-06 noted that ICES did not provide an analytical assessment of cod in the Kattegat in 2013. STECF EWG 13-06 is therefore unable to deal with the ToR 9.

### **5.3 Skagerrak, North Sea and II EU Eastern Channel effort regime evaluation in the context of Annex IIA to Council Regulation (EC) No 57/2011)**

#### *5.3.1 ToR 1.a Fishing effort in kWdays, GTdays, kW and number of vessels by Member State and fisheries*

In 2013, data were made available at the sub area level (3b1= Skagerrak, 3b2 = North Sea and 2 EU, 3b3 = Eastern Channel), allowing a better understanding of the general trends. Most plots and figures within this report have been now provided by sub-area accordingly, but in case of more details are needed, all information are available in the relevant digital Appendixes:

<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

##### **5.3.1.1 Fishing effort of regulated gears, management area 3b**

Catch and effort data including the special conditions in force since 2009 (CPart11 and CPart13) have been provided by all Member States with significant fishing activity in this area. Additionally, distinction is now provided across the various CPart13 specifications (A, B, or C). The data are considered to represent a complete account of fishing effort by regulated gears in the area as reported by national administrations. As a result, any inconsistencies or problems in the data arise from the reported data rather than the subsequent compilation by the working group.

Data are given from 2005 in the tables to ease readability. Because of obvious inconsistencies in the French 2002 data, times series figures are displayed from 2003 only. As noted in previous years, the French 2009 figures should still be regarded as preliminary; they have not been revised yet.

In 2013, the group pursued its investigation of the consistencies between data submitted to STECF and data submitted to ICES WGMIXFISH for the North Sea, the Skagerrak and the Eastern English Channel (ICES, 2013). The group noted that the 2011 effort data appeared very consistent between both data sources (see chapter 4.12), with few deviations only. There is an ongoing collaboration between both groups in order to further check and improve these estimates and reduce the risk of different sources providing different figures.

Information on nominal effort (kW days at sea) by regulated and unregulated gears in the Skagerrak, North Sea (incl. 2EU) and the Eastern Channel are listed by country in Table 5.3.1.1 for the current cod plan categories. Additional information including GTdays and numbers of vessels or the extended time series can be found on the STECF website and in the Appendices.

Information related to the Fully Documented Fishery (FDF) is dealt with specifically in section 5.3.8 further below.

Overall trends in nominal aggregated effort in kilowatt-days by gear category and sub-areas are given in Tables 5.3.1.2 and shown in Figures 5.3.1.1 (by gear type) and 5.3.1.2 (by mesh size grouping). A more detailed analysis of unregulated gears is presented in section 5.3.5.

The North Sea is the main fishing area (77% of the total 2012 regulated effort in area 3b), followed by The English Channel (17%), while the Skagerrak represents a smaller component (6%).

In all three sub areas, regulated effort has decreased since 2003. Overall, the share of regulated gears to total effort in area 3b has also decreased regularly, down to 62% in 2012 on average (but no more than 45% in Skagerrak).

In area 3b2 (North Sea), regulated effort is equally shared between beam trawls and demersal trawls/seines (48% and 46% of total 2012 regulated effort respectively). Small mesh beam trawling (80-119 mm, BT2) and demersal trawls/seines with larger mesh sizes ( $\geq 100$ mm, TR1) are the predominant fisheries. In the Eastern Channel, demersal trawls/seines are also the main gears (65% of the 2012 regulated effort in the area, mainly smaller mesh size 70-99mm TR2), but with beam trawls and passive gears representing important fisheries as well (19% and 16% of the 2012 regulated effort respectively). The main gears in management area 3b1 (Skagerrak) are demersal trawls/seines (88% of the 2012 regulated effort), with a predominance of TR2.

The overall effort by demersal trawls / seines has shown a reduction since 2003, especially in the North Sea. The effort by larger mesh (TR1) had remained relatively stable over the previous cod plan (2004-2009) but has been declining since the full implementation of the new cod plan in 2010. A part of the TR1 decrease observed in 2012 (-15% between 2011 and 2012) is linked to the shift of the French saithe fishery into unregulated Article 11 for that year.

In the Skagerrak, trawling effort has been slightly more stable since 2007. In the Eastern Channel TR2 effort has also remained constant over the last three years.

It must be kept in mind that the current grouping covers many different fisheries. TR2 in particular gathers as different fisheries as e.g. *Nephrops* trawling, mainly in the Northern North Sea, and whiting trawling in the south-western North Sea, and these local fisheries may follow different dynamics. Similarly, TR1 fisheries cover both a mixed whitefish fishery and a saithe-targeted fishery.

A number of CPART 13 SPECON have been applied over the recent years, as displayed in Figures 5.3.1.3 and 5.3.1.4. In 2013, distinction has been made over the various types.

For the whole area 3b, 49% and 36% of the regulated effort (i.e. excluding article 11) by TR1 and TR2 is under Article 13

Many English fisheries other than demersal trawls/Seines have been reported under Article 13B, i.e. catching less than 5%, both in the North Sea and in the Eastern Channel.

There are a number of Article 13 derogations used for trawls/seines fisheries (both TR1 and TR2) in the North Sea. Germany, Scotland and England have reported 60%, 72% and 100% of their TR1 effort in Article 13 respectively. UK has also reported 100% of TR2 effort in Article 13.

Article 13C has represented the largest Specon. It is only used by the UK, but is overall operated at fishing effort levels comparable to the “none” specon. The Art13B has been applied by the UK as well, but also by Germany. Article 13A has only been reported by Northern Ireland in 2012.

There is only a limited use of Article 13 in the Skagerrak (3b1), operated by the German saithe fishery.

As a quality check, STECF routinely compares the data currently submitted with the data submitted during the previous year, as is displayed in table 5.3.1.3. Compared to the data submitted in 2012, updates

were primarily reported by Denmark, England, with few other minor changes by other countries. While some changes ratio can appear large in the table below, they usually apply to categories with limited effort, and this does not affect the overall perception of trends from previous years' report. The updates represent some improvements of the quality of the data submitted, so this year's data are considered more consistent.

Table 5.3.1.1 Area 3b: Trend in regulated nominal effort (kW \*days at sea) by Gear group, country and specon, 2005-2012 (the extended time series is available on the STECF website). NB TR2 CPart11 and SPECON IIA83b is accounted for in the *unregulated* gears

### 5.3.1.2 Fishing effort of unregulated gears, management area 3b

Effort trends by unregulated gears (including CPart11 and SPECON IIA83b) are given in Table 5.3.1.4 and shown in Figure 5.3.1.1.1 together with the regulated effort in the previous section. Category 'none' represents unregulated gear types and mesh sizes in addition to unidentified mesh sizes, and this category represents 0.5% of the unregulated effort in 2012.

The unregulated effort has increased in all three sub-areas in 2012 compared to 2011. This, together with the decrease of regulated effort, make that unregulated effort represents now almost 40% of the total effort in area 3b. One of the most noticeable changes in 2012 is the switch of nearly all French TR1 effort to CPart11 exemption, which was also accompanied to an increase of effort of this fishery back to its 2009 level.

In Skagerrak (3b1), the main unregulated effort is performed with otter trawls with other mesh sizes (57%, including the major small meshed *Pandalus* trawling), and with unregulated TR2 fishing for *Nephrops* under CPart11 exemption (17%). In the North Sea (3b2), most of the unregulated effort is performed by pelagic fisheries and unregulated beam trawls (mainly the small mesh-sized *Crangon* beam fishery), with 35% of the 2012 unregulated effort in the area each. In the Eastern Channel (3b3), nearly all unregulated effort is performed using pelagic trawls, dredges and pots (57%, 25% and 16% of 2012 unregulated effort respectively).

Table 5.3.1.4. Effort (kWdays) of unregulated gear by subarea in area 3b 2005-2012. The full time series is available on the STECF website.

Statistics on fishing capacity can be taken from the electronic appendixes to the present report, which can be downloaded from: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

### 5.3.1.3 Uptake of effort baseline

The uptake of effort baselines is presented on Figure 5.3.1.5). Care must be taken in the interpretation of this figure, for a number of reasons, including e.g: i) the baseline displayed here is extracted from the TAC and quotas regulations nr 43/2009, 53/2010, 57/2011, 44/2012 and 40/2013, and do not take into account the effort buyback performed by Member states as part of Article 13 and/or other agreements. This information is sometimes publicly available for some Member States, but not for all and STECF has not been provided with this information specifically; ii) as described in section 4, the effort information provided to STECF by a number of Member States is calculated in calendar days, whereas the actual regulation of effort uptake is based on 24h period, which can lead to some differences especially in coastal fisheries; iii) STECF data are calculated by calendar year whereas the effort baselines apply from February to January.

The point i) above is particularly important for the demersal trawls/seines fishery, as 49% and 36% of the regulated effort (i.e. excluding article 11) by TR1 and TR2 respectively is operated under article 13, and the actual effort is therefore much higher than the official baseline.

For all other regulated gears, the actual overall effort is not constrained by the baseline, however a break down by individual member states would show that some national segments are more constrained than others.

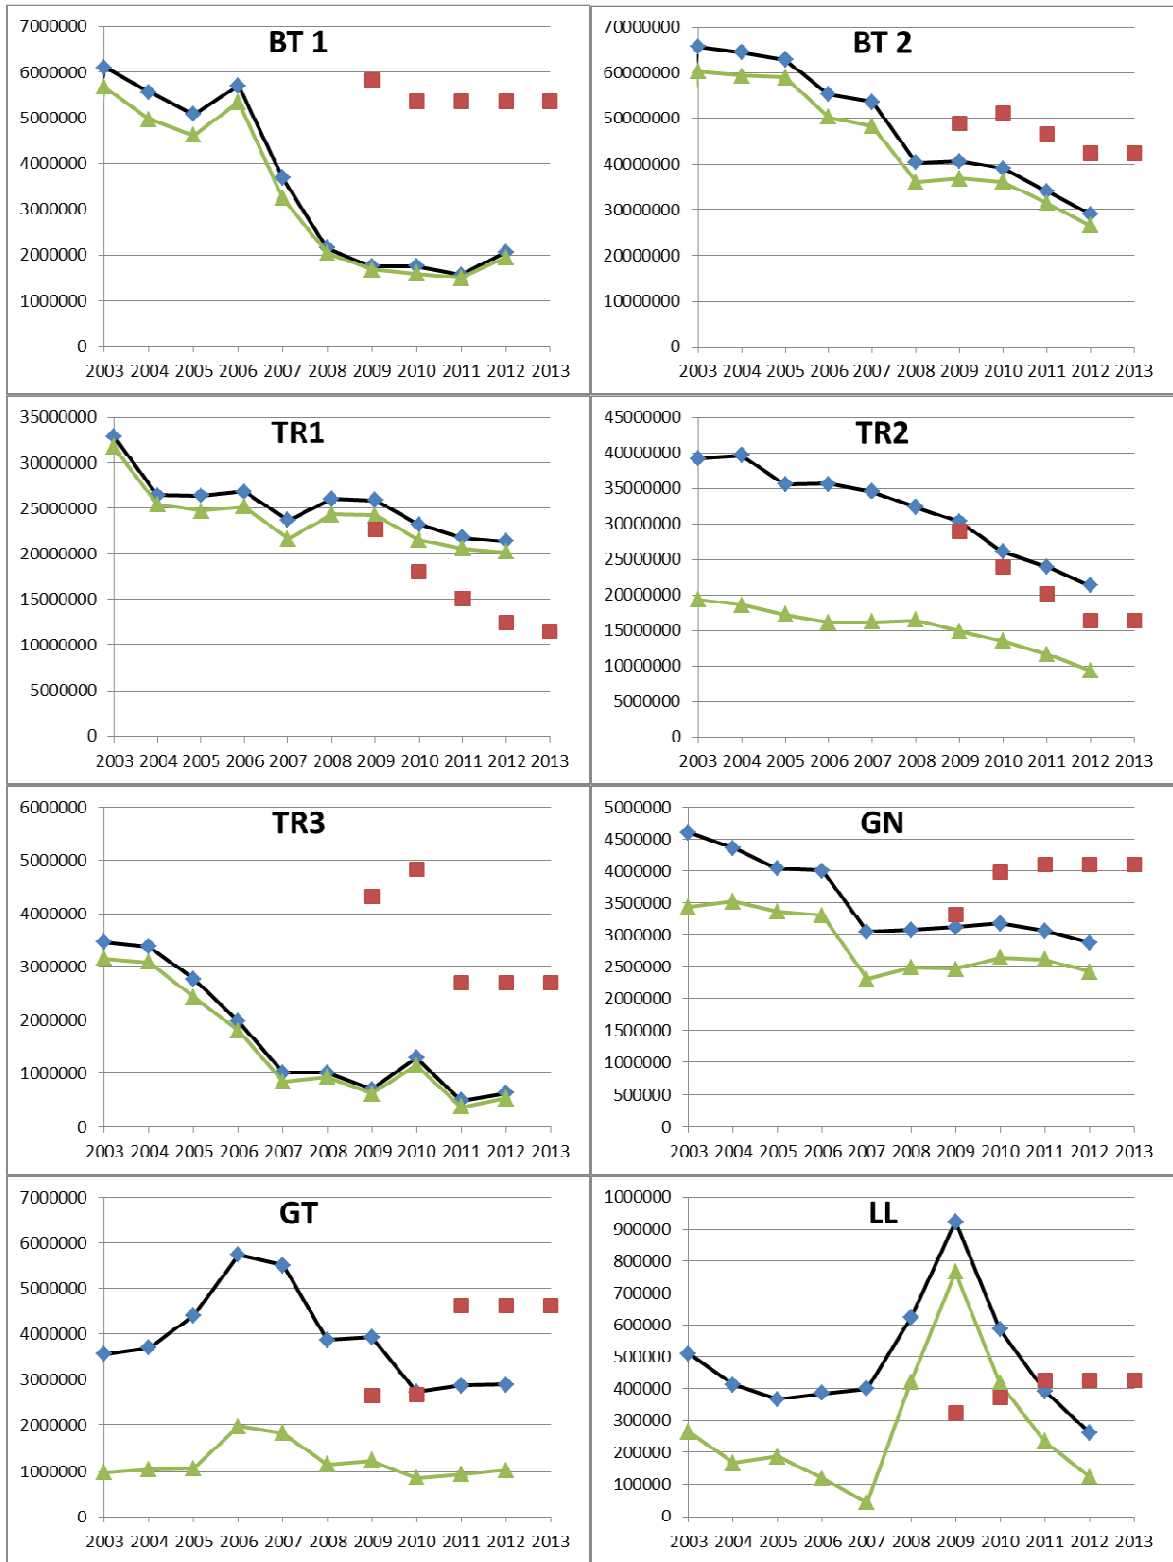

Figure 5.3.1.4 Management area 3b. Uptake of effort ceilings. Red squares: effort ceiling. Blue diamonds: regulated effort in whole area 3b (CPart 11 excluded). Green triangles : regulated effort in North Sea ( subarea 3b2) alone.

### *5.3.2 ToR 1.b Catches (landings and discards) of cod in weight and numbers at age by fisheries*

Estimated landings and discards of cod by cod plan gear category for the areas 3b1, 3b2 and 3b3 are given in Table 5.3.2.1. The same is displayed for unregulated gears (Table 5.3.2.3). Detailed data on age compositions of landings are not given here, but are available on the web site. The same applies to estimates by country. In addition, a discard coverage index is presented in tables 5.3.2.2 and 5.3.2.4. Especially discard rates classified with a C have to be treated with great care. In general, because of the limited availability and reliability of discard information for some species and from some countries contributing substantially to landings, care is required in the use of these data to draw firm conclusions about catch composition. In addition, the procedure used to raise discards as explained in section 4 may not be fully consistent with the procedures used in other contexts and therefore may not be directly comparable.

Information related to the Fully Documented Fishery (FDF) is dealt with specifically in section 5.3.8 further below.

As for the report of 2012, a number of figures are included in this report, displaying total landings (white) and discards (grey – when available) in weight for all regulated gears from 2005 to 2012 (Figures 5.3.2.1)

For the first time landings and discards of cod were analysed for the Skagerrak, the North Sea and the Eastern Channel separately (Table 5.3.2.1 and 5.3.2.3). Discard rates for TR1 (none and CPart13 b+c) and TR2 none categories are generally higher in the Skagerrak than in the North Sea in most of the years. Only TR2 CPart13c shows very high discard rates in the North Sea in 2012 and in the years before. TR2 CPart13b has a substantially lower discard rate in 2012 compared to previous years. In the Eastern Channel discard information is very scarce and not representative. Especially for the TR2 fisheries not enough discard information is available for area 3b3.

Overall, cod discard rates have decreased after 2008 especially for TR1. High discard rates can still be found for TR2 gears.

Catches from unregulated gears do not play a major role apart from one high discard estimate for unregulated otter trawls in 2005. This value appears as outlier in the time series.

Numbers of age by fisheries is not dealt with in this section, and can be found at the website <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306> in Appendix 3.

Table 5.3.2.1 Skagerrak (3b1), North Sea (incl. 2EU; 3b2)), and Eastern Channel (3b3): Landings (t), discards (t) and relative discard rates in weight for cod by regulated gear, 2005-2012.

### 5.3.3 *ToR 1.c-d Catches (landings and discards) of non-cod species in weight and numbers at age by fisheries*

Estimated landings and discards of haddock, whiting, anglerfish, saithe, hake, Nephrops, plaice and sole by cod plan gear category for the areas 3b1, 3b2 and 3b3 are given in Table 5.3.3.1. The same is given for the unregulated gears in table 5.3.3.2 but for sole and plaice only. Detailed data on age compositions of landings and discards are not given here, but are available on the web site. The same applies to other species. This includes some discard information for pelagic species. As discard information for pelagic species is rather scarce, great care is needed in interpreting the available information.

Information related to the Fully Documented Fishery (FDF) is dealt with specifically in section 5.3.8 further below.

Because of the limited availability and reliability of discard information for some species and from some countries contributing substantially to landings, care is required in the use of these data to draw firm conclusions about catch composition. A discard coverage index (DQI) is presented for the first time. The index values for all species in the data call can be found at the website

<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306> in Appendix 2.

In addition, the procedure used to raise discards and explained in section 4.4 may not be fully consistent with the procedures used in other contexts and therefore may not be directly comparable. In particular, some outliers are visible for the TR2 fisheries. For example, the very large whiting discards estimated for 2009 relates to averaged discard rates from other countries allocated to the large French landings in area IV rather than actual observations, which are missing from France. Also high discard estimates for plaice in the shrimp fishery with unregulated beam trawls (BEAM) in 2012 relate to average discard rates applied to the relatively large landings of the Dutch fleet. More examples can be found. These values may not be realistic because of missing discard information from some countries. Further investigations are needed during the second effort meeting in October.

A number of figures are included in this report, displaying total landings (white) and discards (grey – when available) in weight for all regulated gears from 2004 to 2012 (Figures 5.3.3.1 - 3).

Anglerfish, and saithe landings decreased since 2009. Discard rates for saithe are lower compared to former years. Plaice landings have increased and discards remain around the same proportion of the total catch (~40-45%) apart from outlier in 2011 for TR2. Whitefish landings in TR2 are globally low compared to TR1 landings but discard rates are higher. Nephrops landings have decreased in recent years.

Catches with unregulated gears of sole and plaice are very small compared with the total catch (Table 5.3.3.2).

Numbers at age by fisheries is not dealt with in this section, and can be found at the website (<http://stecf.jrc.ec.europa.eu/web/stecf/ewg13>) in Appendix 3.

Table 5.3.3.1 Skagerrak (3b1), North Sea (incl. 2EU; 3b2)), and Eastern Channel (3b3): Landings (t), discards (t) and relative discard rates (R) in weight by species and regulated gear, 2005-2012. DATA FOR OTHER SPECIES ARE AVAILABLE ON STECF WEBSITE.

| SPECIES                   | REG AREA         | REG GEAR | SPECON   | 2005 L           | 2005 D   | 2005 R | 2006 L           | 2006 D | 2006 R | 2007 L           | 2007 D  | 2007 R | 2008 L           | 2008 D | 2008 R | 2009 L           | 2009 D | 2009 R | 2010 L          | 2010 D | 2010 R | 2011 L          | 2011 D | 2011 R | 2012 L          | 2012 D | 2012 R |

Figure 5.3.3.1; Estimated landings (white bars) and discards (grey bars) of targets species by cod plan gear categories in management area 3b1 (Skagerrak). The upper chart shows the most used gears, the lower chart the remaining gears.

Figure 5.3.3.2; Estimated landings (white bars) and discards (grey bars) of targets species by cod plan gear categories in management area 3b2 (North Sea; 2EU). The upper chart shows the most used gears, the lower chart the remaining gears.

Figure 5.3.3; Estimated landings (white bars) and discards (grey bars) of targets species by cod plan gear categories in management area 3b3 (Eastern channel). The upper chart shows the most used gears, the lower chart the remaining gears.

#### 5.3.4 *ToR 1.e CPUE and LPUE of cod, plaice, and sole by fisheries and by Member States*

Catch rates for cod, plaice and sole in g/KW-day for the regulated cod categories are given in tables 5.3.4.1 – 5.3.4.3. In some cases the data refer to landings only, depending on whether discard data were available. In the context of possible effort management measures, it is useful to summarise the impact of each gear category in terms of the relative quantity removed per unit of effort. Using this approach, the CPUE for a given gear, when compared with the CPUE of another gear for the same period, can be used as a proxy for the relative fishing power of the gear. In addition, CPUE and LPUE by year are plotted (Figure 5.3.4.1 – 5.3.4.3) by species for the first four gear categories (when ranked by 2010-2012 average) and areas 3b1, 3b2 and 3b3 separately.

For cod (Table 5.3.4.1), CPUE for most gears has increased in the Skagerrak (area 3b1) in 2012 when compared to 2009 (when the cod management plan was implemented). Only LL1 shows a strong decrease, however, the absolute landings from this gear category are small. GN1 has the highest CPUE followed by TR1, GT1 and TR2.

In area 3b2 (North Sea; 2EU) TR1 CPart13c shows the highest CPUE for cod of all gear categories, including the TR1 none category. This appears counter-intuitive but may reflect the fact that the major cod catching fleets under SPECON 13c (primarily Scotland) are operating in more northerly waters where cod is more abundant, while the TR1 none and TR1 CPart13b fleets are operating in more southerly waters or target other species (e.g., saithe). The CPUE for TR1 CPart13c and LL1 is substantially higher in 2012 compared to 2009. Many other gear categories show a stable or decreasing trend (e.g. TR1 none and CPart13b, TR2 none and TR2 CPart13b+c, BT2, GN1). This is somehow unexpected as increasing cod abundance would suggest increased catch rates also for these categories. However, it may show improved cod avoidance and again differences in stock trends between the northern and southern part of the North Sea.

In area 3b3 (eastern channel) GN1 and TR1 show by far the highest CPUE for cod compared to other gear categories. Both categories have a substantially lower CPUE in 2012 compared to 2009. However, the CPUE for TR2, the gear category with the highest cod catches, is higher in 2012 than in 2009.

With regards to flatfish, it should be noted that plaice and sole in the Skagerrak (3b1) are considered as part of the same stocks as plaice and sole in the Kattegat (management area 3a). Both stocks are considered as being distinct from the North Sea stocks, as are plaice and sole in the Eastern Channel (3b3). Notwithstanding this, large increases in catch rates have been observed in 2012 compared to 2009 for the main gears (BT1, BT2, TR1, TR2; Table 5.3.4.2) which reflects a general increasing trend over the time series which is also supported by a rapidly increasing stock biomass from the assessment (ICES, 2013). Outliers in CPUE (e.g., TR2 none in 2011) can be linked to outliers in discard estimates. This needs further investigation during the second effort meeting in October.

CPUE for sole (Table 5.3.4.3) is highest for passive gears (GT1 and GN1) in 2012. CPUE for the dominant gear in terms of absolute landings (BT2) has decreased slightly in area 3b3 in 2012 compared to 2011, but has increased in area 3b2.

Tables showing LPUE and CPUE by gear groups (regulated and unregulated), area and nation are not presented in this report but are available on the JRC website:  
<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>.

### 5.3.5 ToR 2 Rank regulated gear groups on the basis of catches expressed both in weight and in number of cod, sole and plaice

Rankings of gears in terms of catches and landings are shown in Tables 5.3.5.1 to 5.3.5.4 for area 3b combined and for areas 3b1, 3b2 and 3b3 separated.

(Table 5.3.5.1). The most important gears for plaice are BT2 and TR1, while for sole BT2 and GT1 contribute to more than 80% of the catches. The ranking based on landings is quite similar, only for plaice now BT2, TR1 and BT1 contribute to more than 80% of the landings.

With regards to cod, the ranking of gear types is different between sub-areas 3b1, 3b2 and 3b3. In the Skagerrak TR1 and TR2 accumulate to more than 80% of the catches in 2012 while TR1 and GN1 are the most important gears in the North Sea and 2 EU. Differences can be also observed for plaice and sole between areas 3b1, 3b2 and 3b3.

Ranking in number is not dealt with in this section; number can be found at the website

(<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>) in Appendix 3.

Table 5.3.5.1. Skagerrak (3b1), North Sea including 2 EU (3b2) and Eastern Channel (3b3) combined: Ranked categories according to relative cod, plaice and sole **catches** in weight in area 3b combined, 2003-2012. Ranking is according to the year 2012.

### 5.3.6 ToR 3 Information on small boats (<10m)

#### 5.3.6.1 Fishing effort of small boats by Member State

Effort (Table 5.3.6.1.1) is provided for the vessels under 10m (including Article 11 vessels!) in area 3b, for all countries except Belgium. German data are incomplete as logbook information is not mandatory for vessels under 10m in Germany. UK data are poor until the introduction of registration of buyers and sellers legislation in 2006 after which recording of effort has improved. Danish data are incomplete till 2010. Therefore, up to 2010 data have to be regarded as not representative and should not be interpreted. Especially the increase in effort around 2006 and 2010 does most likely not mean an increase in effort in reality. Between 2010 and 2011 effort was stable. In 2011 around half of the effort is operated with Pots (47%), and secondly GN1 (13%) and TR2 (12%). Unregulated gears account for 60% of total effort from vessels <10m. The highest effort in 2011 was recorded by England, Scotland and France (Table 5.3.6.1.2.)

For the whole area 3b in 2012, the effort from vessels <10m was 9% of the total effort in this area.

Table 5.3.6.1.1 Skagerrak, North Sea and Eastern Channel. Fishing effort (kWdays) by vessels <10m. Data include Art. 11 vessels!

### 5.3.6.2 Catches (landings and discards) of cod and associated species by small boats by Member State

Landings are provided for the vessels under 10m in area 3b, for all countries except Belgium, for the top 10 species ranked according to landings in 2011 (Table 5.3.6.2.1). The main fishery is for edible crab, and secondly for cod, Nephrops and plaice. For the whole area 3b in 2011, the landings from vessels <10m represent around 5, 7, 9 and 2% of the total landings of cod, Nephrops, sole and plaice, respectively. Information by country is available from the STECF website.

The details by gear for cod, plaice and sole is given in Table 5.3.6.2.2. From the regulated gears passive gears are most important. However, substantial landings are reported under none for vessels <10m.

Table 5.3.6.2.1 Skagerrak (3b1), North Sea and 2 EU (3b2), Eastern Channel (3b3). Landings (t) by vessels <10m. Only top 10 species according to landings in 2012 are shown. Information for other species is available from the STECF website.

### 5.3.7 *ToR 4 Evaluation of fully documented fisheries FDF*

The figures in this paragraph cover area 3b. In the electronic appendices, the information by subarea 3b1 (Skagerrak), 3b2 (North Sea) and 3b3 (Eastern Channel) are available.

#### 5.3.7.1 Fishing effort of FDF by Member State and fisheries in comparison with fisheries not working under FDF provisions

Table 5.3.8.1.1 shows that during 2011 nominal fishing effort (KW\*days) by vessels operating in Fully Documented Fisheries (FDF) trials in the Skagerrak, North Sea and Eastern Channel was a small proportion of the total effort (4.9%), but was significant for the main cod gear (27.2% of effort by otter trawls of  $\geq 120$  mm mesh size (TR1)). Compared to last year's report, Germany is added as a FDF country.

In 2012 FDF is still a small proportion of the total effort (5.6%), but it's increasing. The significance for the main cod gear has increased further and is 28.9% in 2012. All FDF countries contributed to this increase.

With respect to the number of vessels that participate in FDF, EWG13-06 assumes that only vessels of the TR1 gear group target cod. The number of TR1 vessels participating in FDF increased from 44 in 2011 to 48 in 2012. These numbers must be used with care because some TR1 vessels also apply GN1 gears, so overlap can occur.

Table 5.3.8.1.1 Skagerrak, North Sea and Eastern Channel: (A part 1) total fishing effort for countries with Fully Documented Fisheries (FDF, REM/CCTV), (B) FDF (REM/CCTV) nominal fishing effort (kW days) and (A part 2, C) the percentage of total effort attributable to FDFs. The figures for 2011 are changed compared to the ones of last year's report, due to a revision of the Danish, English and Scottish effort data for 2011.

### 5.3.7.2 Catches (landings and discards) of cod and other species taken by FDF fisheries by Member State and fisheries in comparison with fisheries not working under FDF provisions

Cod catches were recorded in fisheries using TR1, TR2, GN1 and Pots (Table 5.3.7.2.1), but most catches (94.8% of total FDF catches) were from vessels using TR1 gears. In total, 36% of cod catches by EU vessels were taken during FDF trials; 52%, 38%, 62%, 36% and 31% of German, Danish, English, Dutch and Scottish cod catches respectively.

Table 5.3.7.2.1 Skagerrak, North Sea and Eastern Channel: (A part 1) total catches for cod for countries with Fully Documented Fisheries (FDF, REM/CCTV), (B) total catches (tonnes), and (A part 2, C) the percentage of catches attributed to FDFs. The figures for 2011 are changed compared to the ones of last year's report, due to a revision of the Danish, English and Scottish data for 2011.

### 5.3.7.3 Comparative analysis of cod selectivity by FDF fisheries and non-FDF fisheries

The analysis is based on a comparison of the age composition of cod catches of non FDF fisheries (table 1.1.7.3.1) and cod catches of FDF fisheries (table 1.1.7.3.2). It is done only for area 3b2 (North Sea), TR1 in 2012. The catches in numbers for a certain age are expressed as a percentage of the total catch numbers (TC).

The current figures do not show a large difference between FDF and non FDF fisheries. It should be noted that not all countries raise FDF fisheries separately. Only Denmark, England (only otter trawls) and Scotland do so but no information is available how gaps in the sampling data are treated (e.g., missing quarters).

Table 1.1.7.3.1 Age composition non FDF catches for cod.

### 5.3.8 ToR 5 Spatio-temporal patterns in effective effort by fisheries

Due to time constraints the EWG 13-06 on fishing effort regime evaluations did defer the requested analyses to its second meeting STECF EWG 13-13 part 2 scheduled for 7-11 October 2013 to be held in Barza d'Ispra, Italy.

Last year's analyses are documented in the report of STECF 12-16 published in 2012:

<http://stecf.jrc.ec.europa.eu/reports/effort>

### *5.3.9 ToR 6 Remarks on quality of catches and discard estimates*

The STECF EWG has no specific comments in addition to those given in section 4. A discard coverage index is presented for the first time. The index values for all species, area and gear combinations can be found at the STECF website in annex 2: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

### *5.3.10 ToR 7 Estimation of conversion factors to be applied for effort transfers between regulated gear groups*

STECF EWG 13-06 presents the estimated cod CPUE and respective effort transfer factors between donor and receiving regulated gear groups. Red cells in Table 5.3.10.1 are indicated to be imprecise due to lack of adequate discard information. Yellow cells indicate sufficient sampling and green cells good sampling information.

Table 5.3.11.1 Cod CPUE (average 2010-2012) and respective effort transfer factors between donor and receiving regulated gear groups. Red cells are indicated to be imprecise due to lack of adequate discard information. Yellow cells are covered by adequate discard information while green cells are considered well representative.

Note: if the calculated factor > 1, then factor is set to 1. If the calculated CPUE or LPUE = 0, then the CPUE or the LPUE is set to 1.

### 5.3.11 ToR 8 Estimation of partial fishing mortalities of cod, haddock, saithe, whiting, plaice and sole by area, Member State and fisheries and correlation between partial cod mortality and fishing effort by area, Member State and fisheries

Partial fishing mortalities and effort trends in areas 3b1, 3b2 and 3b3 are presented for regulated fisheries in relation to the estimated fishing mortality by ICES (2013) and the catches, landings and discards volumes in relation to the estimated total catch for the year available. The full list of all fisheries and species can be downloaded from the EWG's web page: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>. The anticipated trend in fishing mortality as derived from the cod plan is also presented in the following Tables 5.3.11.1-9. The presented parameters  $r$  (value of Pearson's coefficient of correlation), numbers of points considered, and a  $p$  value to quantify the statistical significance ( $\leq 0.05$ ) allow conclusions about the quality of the correlation between the partial  $F$  and fisheries specific fishing effort. Those values are presented in the Tables 5.3.11.1-9 and resulting regressions are shown the Fig. 5.3.11.1-9 for regulated fisheries.

It can be concluded from the estimated  $F$  in 2012 (Table 5.3.11.1) that the annual  $F$  reductions stipulated by the cod management plan have been nearly reached. This is a major change to last year's perception of the stock. Unaccounted removals are no longer estimated for years after 2005 in the cod assessment. Discard mortality is generally high but has been reduced significantly since 2008. The regulated fisheries presented do contribute about 70% to the total fishing mortality for cod. The remainder is due to catches of non-EU states and differences in the discard raising procedures applied by ICES and STECF EWG 13-06.

STECF EWG 13-06 notes that the correlations between the partial  $F$ s and effort are significant for some important métiers catching cod but insignificant for others. The partial  $F$ s resulting from catches of Danish gill nets, TR2 from Denmark and TR1 from Germany in area 3b2 are correlated significantly with fishing effort. The major Scottish and Danish cod fishery using TR1 gears do not display a significant correlation between their partial  $F$  and fishing effort. Overall, this indicates that effective fisheries management by fishing effort in units of kWdays at sea may be possible, also as an auxiliary measure to catch constraints and technical measures. However, management of fishing effort may be difficult at a national level and requires further investigation.

STECF EWG 13-06 notes that there are indications of reductions in partial  $F$ s from catches of the Scottish TR1 and TR2 fisheries in 2011 operating under the provisions of article 13.2.b and c of the cod

plan, mainly caused by F<sub>par</sub> reductions in the discards of these particular fisheries. The German and French fisheries operating under the provision of article 13.2.b are either negligible or have reduced their contribution to cod fishing mortalities substantially.

The following tables 5.3.14.10-13 list the partial F<sub>s</sub> of fisheries using effort regulated gears for plaice and sole in 4. The Figures 5.3.14.2-3 display the respective regressions between partial F<sub>s</sub> and the fishing effort deployed for the major fisheries for plaice and sole. Information for other species is available from the STECF website.

Table 5.3.14.1 **Cod** in area **3b1**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **catches** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.3.14.2 **Cod** in area **3b1**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **landings** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.3.14. 3 Cod in area 3b1. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **discards** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.3.14.4 **Cod** in area **3b2**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **catches** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

| 2008 fixed baseline annual F reductions by 10 percent as F<=0.4, Fmsy=0.19 |     |          |         |       |       |       |       |       |       |       |       |                  | Effort kW days running previous year baseline |           |           |           |          |          |          |          |          |          |         |        |       |    |

Table 5.3.14.5 **Cod** in area **3b2**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **landings** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

|                       |                   | 2008 fixed baseline annual F reductions by 10 percent as F<=0.4, Fmsy=0.19 |       |       |       |       |       |       |       |       |       | Effort kW days running previous year baseline |           |           |           |           |          |          |          |          |          |          |       |       |   |  |

Table 5.3.14.6 **Cod** in area **3b2**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **discards** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.3.14.7 **Cod** in area **3b3**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **catches** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.3.14.8 **Cod** in area **3b3**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **landings** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.3.14.9 **Cod** in area **3b3**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 cod assessment, as well as partial Fs for **discards** of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

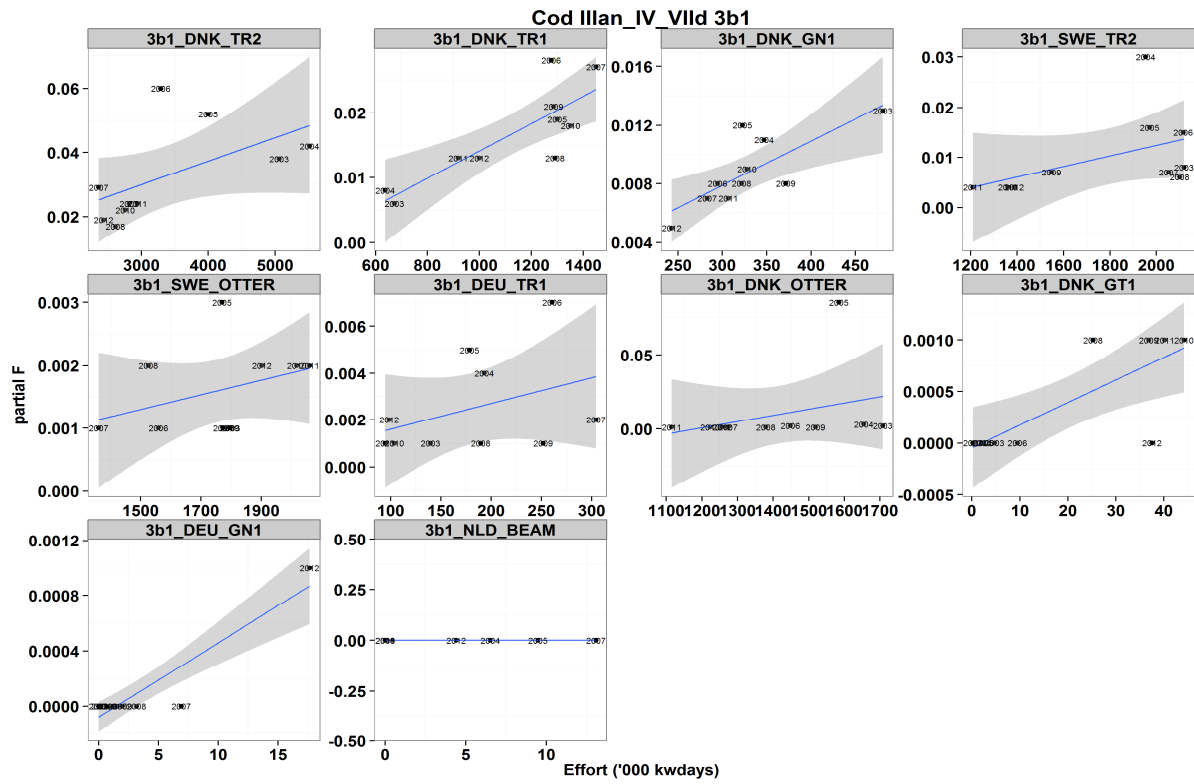

Fig. 5.3.14.1 Cod. Partial fishing mortality (based on harvest rate estimates) over effort (kWd) in area 3b1 (Skagerrak) of major fisheries, 2003-2012.

Fig. 5.3.14.2 Cod. Partial fishing mortality (based on harvest rate estimates) over effort (kWd) in area 3b2 (North Sea; 2EU) of major fisheries, 2003-2012.

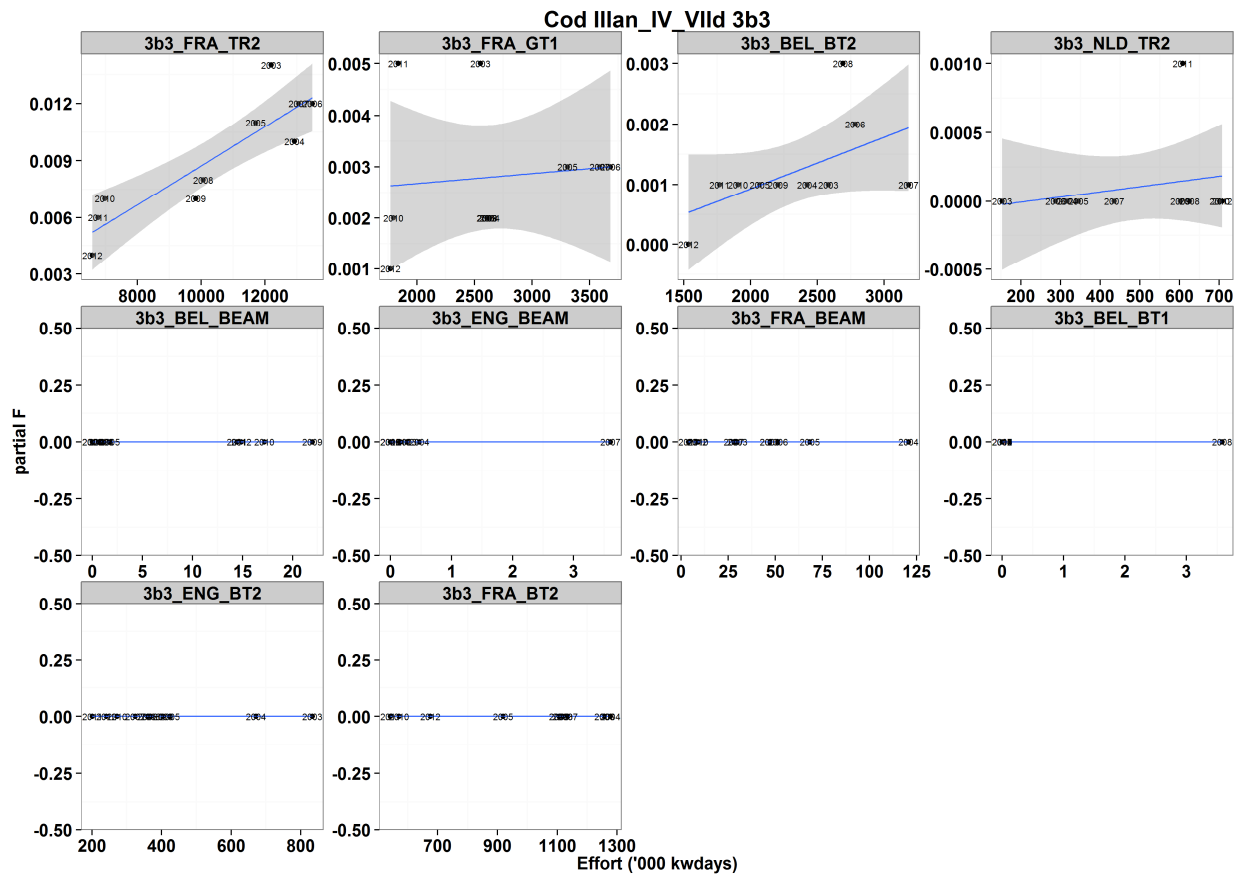

Fig. 5.3.14.3: Cod. Partial fishing mortality (based on harvest rate estimates) over effort (kWd) in area 3b3 (eastern channel) of major fisheries, 2003-2012.

Table 5.3.14.10 **Plaice** in area **3b2**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 plaice assessment, as well as partial Fs for **catches** of fisheries using regulated gears (in the North Sea). The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

| 2006 running base line annual F reductions by 10 percent as F<=0.3, Fmsy=0.25 |     |          |         |       |       |       |       |       |       |       |       | Effort kW days running previous year baseline |       |                |         |         |         |         |         |         |         |         |         |        |       |           |        |       |  |  |  |  |  |

Table 5.3.14.12 **Plaice** in area **3b2**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 plaice assessment, as well as partial Fs for **discards** of fisheries using regulated gears (in the North Sea). The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

| 2006 running base line annual F reductions by 10 percent as Fc=0.3, Fmsy=0.25 |                   |                |       |       |       |       |       |       |       |       |       | Effort kW days running previous year baseline |           |           |           |           |          |          |          |          |          |          |       |       |        |   |

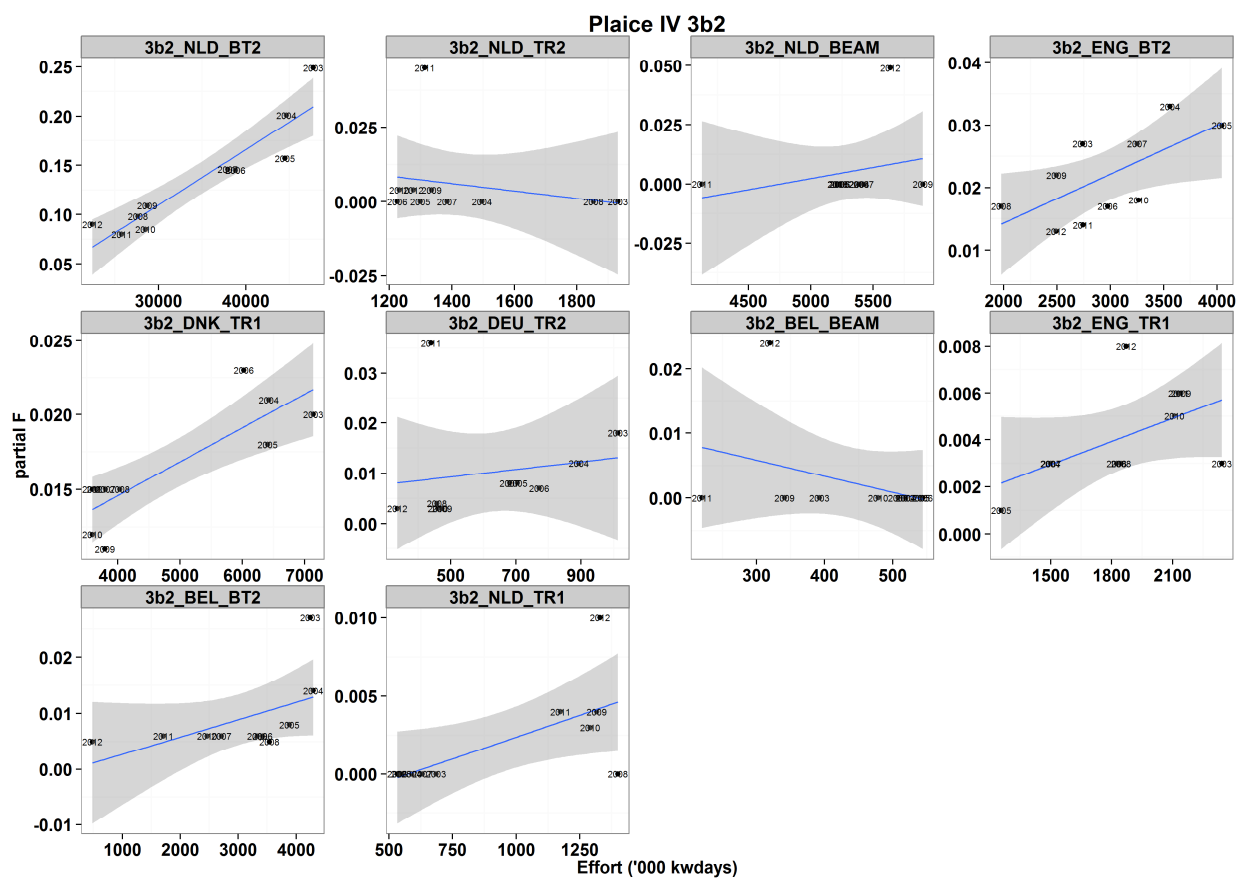

Fig. 5.3.14.4 Plaice. Partial fishing mortality (based on harvest rate estimates) over effort (kwd) in ICES area IV (North Sea) of major fisheries, 2003-2011. R = Pearson's coefficient of correlation, p value to quantify the statistical significance ( $\leq 0.05$ ). Note that the panel called combined fleets includes all regulated and unregulated fisheries and that the trends of the fisheries are not separated by special conditions.

**Table 5.3.14.13 Sole** in area **3b2**. The left part of the table lists estimated F trajectories from the management plan and the ICES 2012 sole assessment, as well as partial Fs for **catches** of fisheries using regulated gears (in the North Sea). The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations \*). A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of F<sub>par</sub>/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

| 2006 running base line annual F reductions by 10 percent as F<=0.2, Fmsy=0.22 |     |          |          |       |       |       |       |       |       |       | Effort kW days running previous year baseline |                |       |           |           |           |           |          |          |          |          |          |          |         |       |       |           |       |

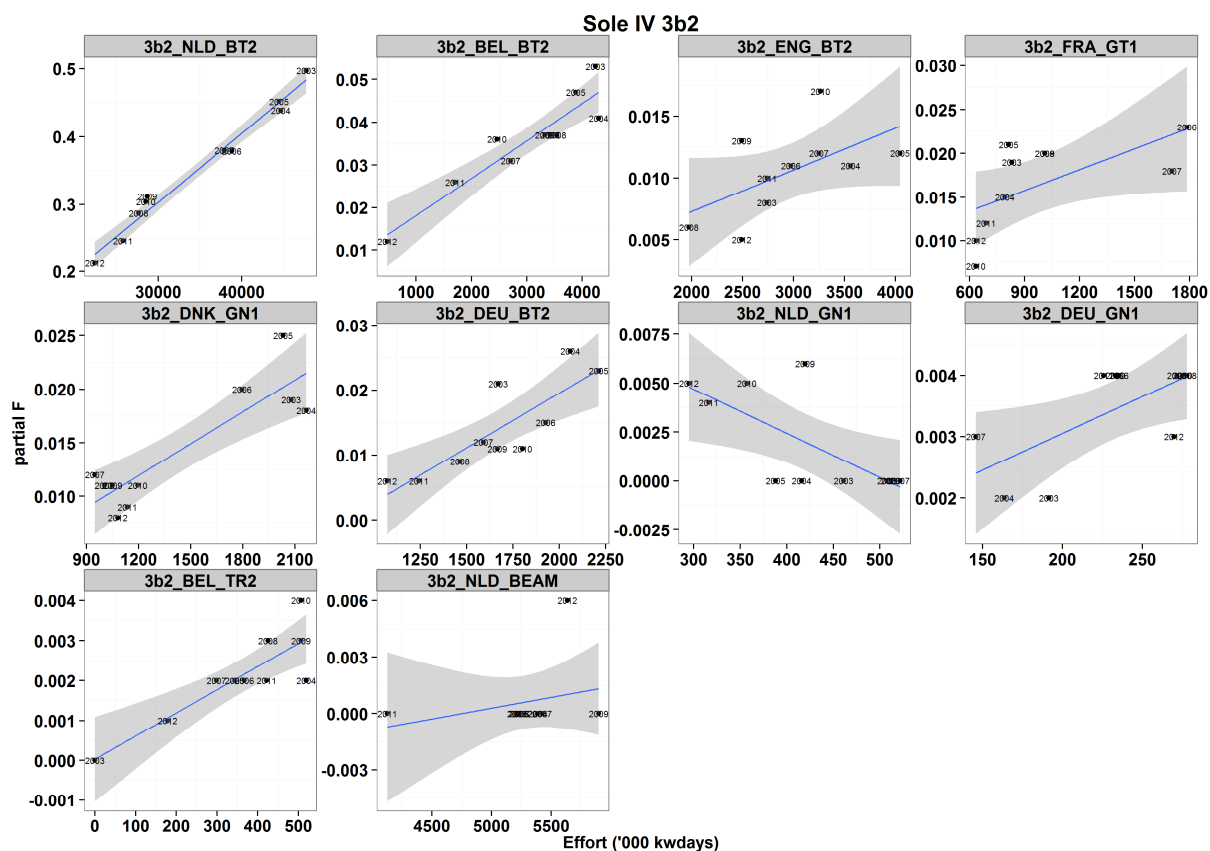

Fig. 5.3.14.5 Sole. Partial fishing mortality (based on harvest rate estimates) over effort (kWd) in ICES area IV of major fisheries (North Sea), 2003-2011.  $R$  = Pearson's coefficient of correlation,  $p$  value to quantify the statistical significance ( $\leq 0.05$ ). Note that the panel called combined fleets includes all regulated and unregulated fisheries and that the trends of the fisheries are not separated by special conditions.

*5.3.12 ToR 9 Trends in fishing mortality and fishing effort by Member State and fisheries with regards to the cod plan (R (EC) No 1342/2008) provisions, in particular with regard to Article 13*

STECF EWG 13-06 notes that detailed analyses of the national partial  $F$  reductions as stipulated in article 13 of the cod plan as requested in ToR 9 will be conducted during the forthcoming STECF EWG 13-13 (7-11 October 2013).

*5.3.13 ToR 10 Considerations in order to accomplish spatio-temporal patterns in standardized catchability indices for cod*

STECF EWG 13-06 notes that detailed analyses of the spatio-temporal patterns in standardized cod catchability will be conducted during the forthcoming STECF EWG 13-13 (7-11 October 2013). Last year's evaluations are documented in the report STECF 12-16 and can be downloaded at:

<http://stecf.jrc.ec.europa.eu/reports/effort>

## **5.4 West of Scotland effort regime evaluation in the context of Annex IIA to Council Regulation (EC) No 57/2011)**

### *5.4.1 ToR 1.a Fishing effort in kWdays, GTdays, kW and number of vessels by Member State and fisheries*

According to the data provided by Member States in 2013 aggregated by categories in Coun. Reg. (EC) 1342/2008 (cod plan) the fishery West of Scotland is primarily an otter trawl fishery; beam trawls and static gears are hardly used. Longline gears are the second most important gear category; but still much less important in terms of effort than trawl gears. Spanish data has been provided but for 2012 only. The Spanish effort represents 3% of large mesh trawl (TR1) effort and 39% of longline effort in 2012. Table 5.4.1.2 shows the percentage change in effort totals supplied by Member States compared to data submitted in 2012 (and as available on the STECF website). There were revisions to pelagic trawl effort from Denmark and effort using pots from Ireland but these changes are not considered to significantly affect the analysis of this report.

In terms of kWdays the overall nominal effort in ICES division VIa displays a decrease of 41% since 2003. The majority of that reduction took place between 2003-2006 and 2009-2011. Effort within regulated gears is 56% less in 2012 compared to 2003. Regulated effort by trawl and seine gears (TR gears under Coun. Reg. (EC) 1342/2008) shows a long term decrease in effort and fell to its lowest level in the time series in 2011, but was stable between 2011 and 2012 for those nations reporting in both years, (Table 5.4.1.3 and Figure 5.4.1.1). With Spanish data supplied for 2012 only, the trend in long line (LL1) effort is uncertain.

Within the trawl gear categories it can be seen from Figure 5.4.1.2 that effort is only significant in categories TR1 and TR2. TR3 effort is very low (with no effort recorded in 2010; Table 5.4.1.3). There is a clear contrast in effort trend between the TR1 and TR2 categories; effort using TR1 gears declined markedly between 2003 and 2006, was relatively stable from 2006 to 2009 before falling again. Up to 2010 patterns of effort decline or stability was similar between the TR1 and TR2 gears, but effort by TR2 gears stabilised in 2011 and there has been an increase from 2011 to 2012. As a consequence effort by regulated TR2 gear is now higher than that for TR1 gear.

Four years of data are now available regarding TR effort under articles 11 and 13 of Coun. Reg. (EC) 1342/2008. Effort under article 11 is classified as unregulated (exempt) so Figure 5.4.1.3 does not include effort with CPART11. The figure shows a sharp decline in TR1 'none' effort in 2009, but this was more than compensated for by effort now categorised under CPART13 leading to a small increase in overall TR1 effort. Effort under TR1, CPART13 increased again in 2010 but the fall in 'none' effort was bigger. Effort in the 'none' category has continued to decrease and an increase in effort under CPART13 in 2012 has not prevented overall TR1 declining to its lowest value in 2012. Effort under CPART13B is chiefly from the French saithe fishery in 2012. Effort under this category rose to equal that of category CPART13D (fishing conducted west of a line known as the West of Scotland line).

Figure 5.4.1.4 shows a very large decline in TR2 'none' effort in 2009 which was bigger than the effort recorded for TR2, CPART13 in 2009. Effort by vessels not qualifying for special condition has remained stable since. Vessels transferred from CPART13 to CPART11 in 2010 but there was also an overall reduction in effort. There was a considerable increase in effort assigned to CPART13C in 2012 leading to an overall increase in regulated TR2 effort.

Unregulated effort comprises effort not assigned to a regulated gear type and effort where a special condition allows a vessel to be exempted from effort control (west of Scotland only special condition CPART11 applies to date). Effort not assigned to a regulated gear type comprises mesh size groups 32-54mm and 55-69mm targeting pelagic resources, effort where mesh size was not identified in the data provided and unregulated gear types such as pots and dredges. Figure 5.4.1.5 illustrates the importance of unregulated gear effort within the area. Between 2004 and 2010 total effort recorded for unregulated gears has been close to that for regulated gears (slightly greater between 2004 and 2006) while following a similar trend. Unregulated effort is increasing since 2010, exceeded that of regulated effort since 2011 and the difference has increased in 2012. Effort of unregulated gears has fallen by 22% in 2012 compared to 2003 (Table 5.4.1.3). Table 5.4.1.4 and Figure 5.4.1.6 show trends in unregulated effort by gear type. Very small quantities of effort under TR1, CPART11 are recorded except in 2012 (doubling of Irish effort and addition of French effort under this category). In 2010-2012 approximately 1m kWdays was recorded under TR2, CPART11. Pelagic trawl is the most significant unregulated category but has also contributed most to the long term decline in unregulated effort.

Tables showing effort in terms of gross tonnage days at sea (GT\*days at sea), number of vessels by derogation and capacity in kW are not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

It should be noted that to record an annual number of vessels the maximum number from any of the four quarters within the year is chosen. Because vessels are not necessarily assigned exclusively to a single derogation, some multiple counting may occur if summing across derogations.

Table 5.4.1.1 West of Scotland. Trend in nominal effort (kW\*days at sea) by derogations existing in Appendix 1 of Annex IIA of Coun. Reg. 39/2013 and Member State, 2000-2012. Derogations are sorted by gear type and country.

### 3d, All reg gears, KWdays

Figure 5.4.1.1 West of Scotland. Trend in nominal effort (kW\*days at sea) by gear types as defined by Coun. Reg. 1342/2008, 2003-2012. Values exclude effort in categories exempted from effort control (CPart11).

### 3d, Reg gear TR, KWdays

Figure 5.4.1.2 West of Scotland. Trend in nominal effort (kW\*days at sea) by TR gear groups as defined by Coun. Reg. 1342/2008, 2003-2012. Values exclude effort in categories exempted from effort control (CPart11).

### 3d, Reg gear TR1, KWdays

Figure 5.4.1.3 West of Scotland. Trend in nominal effort (kW\*days at sea) by specon for regulated gear TR1. Line labelled TR1 represents the sum of the other lines. Categories exempted from effort control (CPart11) excluded.

### 3d, Reg gear TR2, KWdays

Figure 5.4.1.4 West of Scotland. Trend in nominal effort (kW\*days at sea) by specon for regulated gear TR2. Line labelled TR2 represents the sum of the other lines. Categories exempted from effort control (CPart11) excluded.

### 3d, Reg vs Unreg gears, KWdays

Figure 5.4.1.5 West of Scotland. Trend in nominal effort (kW\*days at sea) by regulated gear groups (combined) as defined by Coun. Reg. 1342/2008 compared to unregulated gear groups (combined), 2003-2012. Unregulated effort includes gears with special conditions that exempt them from effort control (TR1 and TR2 with specon CPART11).

### 3d, All unreg gears, KWdays

Figure 5.4.1.6 West of Scotland. Trend in nominal effort (kW\*days at sea) by unregulated gear groups (combined), 2003-2012. Unregulated effort includes gears with special conditions that exempt them from effort control (TR1 and TR2 with specon CPART11).

#### *5.4.2 ToR 1.b and c Catches (landings and discards) of cod and non-cod species in weight and numbers at age by fisheries*

Table 5.4.2.1 lists the landings and discards for cod for gears defined according to Coun. Reg. (EC) 1342/2008 and table 5.4.2.2 shows the discard rate and associated quality index for the same gears.

Table 5.4.2.3 lists landings and discards for other demersal species considered of importance, anglerfish (ANF), haddock (HAD), hake, (HKE), Nephrops (NEP), plaice (PLE), saithe (POK), sole (SOL), and whiting (WHG) for gears defined according to Coun. Reg. (EC) 1342/2008. Table 5.4.2.4 shows the discard rate and associated quality index for these species and gears.

Table 5.4.2.5 lists landings and discards for pelagic species (caught in the largest quantities west of Scotland) for gears defined according to Coun. Reg. (EC) 1342/2008. Table 5.4.2.6 shows the discard rate and associated quality index for these species and gears.

Tables 5.4.2.7 and 5.4.2.8 show the landings and discards and quality indices respectively for cod as caught by unregulated gears. Tables 5.4.2.9 and 5.4.2.10 show the landings and discards and quality indices respectively for the other demersal species selected as caught by unregulated gears. Tables 5.4.2.11 and 5.4.2.12 show the landings and discards and quality indices respectively for the pelagic species selected as caught by unregulated gears.

The data given in Tables 5.4.2.1 and 5.4.2.2 form the basis of Figure 5.4.2.1 displaying the relative catch compositions by derogations for the years 2003-2012. Discard information on Nephrops for any gear and for all other species for non-trawl gears was not available for this report. Therefore the lack of the dark bars representing discards in these figures indicates a lack of observations for non-trawl gears and a lack of information for Nephrops rather than an absence of discards.

A description of the catch compositions of the derogations relevant to the area follows:-

TR1 -- The main species caught are haddock, saithe and anglerfish. The catches of hake have been steadily rising. The landings of both hake and anglerfish now well exceed those of cod; the landings of the latter reflect the steady reduction in the cod TAC followed by the introduction in 2012 of a zero TAC but 1.5% landings by-catch allowance. Catches of cod have remained much higher than landings because of increased discards.

TR2 – Landings are dominated by Nephrops. Considering landings across all gear categories this species contributes the greatest contribution to landings among the demersal species. By-catch of the finfish occur with historically high discard rates of haddock and whiting, however whiting catches are recorded as low in recent years.

TR3 – Landings for this gear category are negligible for this region.

GN1 – This category lands anglerfish, hake and saithe. The landings of hake and saithe increased rapidly to 2008 but the overall quantities are still small.

LL1 – The longline fishery lands hake almost exclusively. Landings of hake are up to 6 times that from the gillnet fishery. The large increase in hake landings by this gear category between 2011 and 2012 is because of the addition of Spanish data for 2012 (landings by nations other than Spain decreased by approx 500 tonnes). Spanish landings are unknown for earlier years.

Unregulated (POTS) – Of those gears not regulated under Coun. Reg. (EC) 1342/2008 the most significant landings of the species considered come from pots – in this case Nephrops (although the gear takes numerous other species).

The overall discard rate of cod (by weight) has increased in years subsequent to 2003 (Table 5.4.2.1). This was due initially to higher discard rates in the smaller meshed category (TR2) but in 2006 the recorded discard rate for the TR1 gear group leapt from 1% to 49% (reflecting legislation successfully curtailing illegal landings). The rate of discarding in the TR1 gears has been between 70 and a little over 90% in 2008-2012. Catches of cod by TR2 ‘none’ have been negligible since 2009 but the discard rates recorded for TR2 CPART13 and CPART11 are still very high (although low sampling coverage of TR2 vessels lead to high annual variation). It is believed the present high discard rates result from a combination of restrictive quotas, fishing opportunities for other species and year classes of cod (2005 and 2008 year classes) large enough to allow catches over and above the cod quota.

Data on age specific landings are not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

It can be seen from the tables and figures presented that landings of plaice and sole are negligible across all gear categories and west of Scotland it is only relevant to consider age specific data for cod for this region. Also, only trawl gears catch enough cod to merit a catch at age analysis.

Table 5.4.2.1 West of Scotland. Landings (t), discards (t) and relative discard rates for cod by derogation existing in Table 1 of Annex IIA of Coun. Reg. (EU) 39/2013 2003-2012.

Figure 5.4.2.1 West of Scotland. Landings (t) and discards (t) by derogations in Coun. Reg. (EC) 1342/2008 and species, 2003-2012 (from left to right). White bars represent landings, grey bars discards. Note that discard data are only available for some species and gears. The lack of discard information for a given species/gear in this figure represents no information rather than zero discards.

Figure 5.4.2.1 (cont) West of Scotland. Landings (t) and discards (t) by derogations in Coun. Reg. (EC) 1342/2008 and species, 2003-2012 (from left to right). White bars represent landings, grey bars discards. Note that discard data are only available for some species and gears. The lack of discard information for a given species/gear in this figure represents no information rather than zero discards.

### 5.4.3 ToR 1.d CPUE and LPUE of cod by fisheries and by Member States

Tables showing LPUE and CPUE by gear groups (regulated and unregulated), area and nation are not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

Results aggregated across countries are presented below.

Table 5.4.3.1 shows cod catch per unit effort (CPUE), recorded in g/kWdays for all derogations within Coun. Reg (EC) 1342/2008 while table 5.4.3.2 shows landings per unit effort (LPUE) for the same derogations. Section 5.4.1 showed longlines to be the most significant gear category after trawl and seine gears in terms of kWdays effort west of Scotland but the tables show CPUE of cod for this gear type (LL1) to be low with no catch of cod recorded from 2008 onward. The tables clearly show TR1 gears have the highest CPUE and LPUE for cod and that TR1 with special condition CPart13D (fishing west of the 'French Line') having the highest CPUE among the TR1 categories.

Figures 5.4.3.1 and 5.4.3.2 show cod CPUE and LPUE respectively for the top four gear types under Coun. Reg (EC) 1342/2008, ranked in terms of average value over the most recent five years. It should be noted no discard information is available for gill nets (GN1) or the beam trawl categories (BT1 and BT2) such that results for these gear types are effectively LPUE in each table and/or figure. It is clear from Figure 5.4.3.1 that CPUE values have increased considerably for the TR1 gear type since 2005. ICES assessments have estimated the 2005 – and to a lesser extent the 2008 - year classes of cod to be large compared to the norm since 2000, and also a slow increase in SSB since 2006. The pattern of CPUE is consistent with the catchability of fish in the stronger year classes increasing as the fish grow in size (and possibly redistribute from nursery areas) and an increase in overall stock abundance. TACs for cod have declined over the same period and from Figure 5.4.3.2 it can be seen LPUE for the TR1 gears remained constant between 2004-2008 and has fallen again to a new lower level for 2009-2012.

To illustrate the point further Figure 5.4.3.3 shows the ratio of catch to landings for cod for the gear type TR1. Up to 2005 very few discards of cod were recorded for the TR1 gear resulting in a catch/landings value close to 1. Since then this ratio has increased so that in 2012 catch is approximately 8 times landings. Figure 5.4.3.2 suggests the increase in CPUE to be due to the 2005 and 2008 year classes. This result is consistent with results from the ICES division VIa cod assessment. Uncertainty of discard observation data for the TR2 gear mean results for the TR2 gear have not been included in Figure 5.4.3.3.

Figure 5.4.3.3 West of Scotland. Ratio of Cod catch to landings for the gear group TR1 under Coun. Reg. 1342/2008.

#### 5.4.4 ToR 2 Rank regulated gear groups on the basis of catches expressed both in weight and in number of cod

Tables 5.4.4.1 and 5.4.4.2 show, respectively, cod catch and cod landings (tonnes) by gear types as specified in Coun. Reg. (EC) 1342/2008, ranked according to their 2012 values. From these Tables the most important category in terms of cod catch and landings is TR1 with a three year average of 94-99% of the VIa cod catch – and landings - total by weight. The second most important gear category is TR2, which from section 5.4.2 can be seen to be a gear category with Nephrops as the primary landed species. The ranking of these two gear types is consistent whether the 2012 values or a three year average is used but the contribution of TR2 gear to catches has noticeably declined starting in 2008 and to landings from 2009. The contribution to catch from all other gear types is less than 1%, but for landings gill nets contribute between 1 and 3%.

Ranking in terms of numbers of fish are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

EWG-13-06 notes that the estimation of ranking by numbers of fish uses only categories for which age information is available. Categories without any information about age compositions are disregarded.

#### 5.4.5 ToR 3 Information on small boats (<10m)

Activity by vessels <10m in area 3d (west of Scotland) was recorded by France, IOM, UK(EWNI) and UK(Scotland). Ireland supplied landings data. Descriptions of the type and quality of data available for assessing effort and landings of vessels <10m can be found in section 4.

##### 5.4.5.1 Fishing effort of small boats by Member State

Effort by nation and gear type is shown in Table 5.4.6.1.

Overall effort is 10% higher in 2012 compared to 2003 although it has been relatively stable since 2006. Greatest effort comes from Scottish vessels deploying pots. The effort employed in this category to a certain extent dictates the perception of overall effort changes in this region. The second largest effort total is for Scottish vessels employing TR2 gear. Effort in this category is roughly one eighth that in pots and has declined from a high in 2006. Although small in absolute terms compared to Scottish effort there have been large increases in Northern Irish effort in pots in recent years, although a 15% drop in effort was recorded 2011-2012. Northern Irish dredging effort has also increased significantly recently and is now comparable to Scottish dredging effort.

Table 5.4.6.1 West of Scotland. Effort (kW\*days) of vessels under 10 metres by gear type and Member State, 2000-2012.

#### 5.4.5.2 Catches (landings and discards) of cod and associated species by small boats by Member State

Table 5.4.6.2.1 summarises landings by vessels under 10m west of Scotland. France, IOM, UK (EWNI) and UK (Scotland) recorded both effort and landings in area 3d West of Scotland.

Much of the Nephrops and crab catch comes from the creel fishery operating on the west coast while scallops are caught by dredges. Nephrops are also caught by trawls using TR2 mesh size. There are also significant landings of unidentified species (OTH) by Scottish vessels.

Table 5.4.6.2.1 Landings (t) by vessels under 10m west of Scotland by Member State and species (ANF, CRE, HAD, HKE, NEP, PLE, POK, SCE, SOL, WHG and OTH[other species not specified in the data call])

#### 5.4.6 ToR 4 Spatio-temporal patterns in effective effort by fisheries

Spatial figures of effort for area 3d concentrate on those categories identified as significant in terms of recorded effort (see previous section 5.4.1) and in terms of catches of cod (section 5.4.2). From section 5.4.2 catches of plaice and sole are shown to be small for all gear categories in the west of Scotland area and these species were not considered when deciding on categories to present here. Figures use a common scale across years for a given category (e.g. TR1) but scales are unique to each category such that the colours assigned to statistical rectangles for category TR1 can not be compared directly to those assigned for category TR2 say. Figures are based on absolute values. This is after data values across all years have been combined for that category. Zero values are removed first.

TR1 (Figure 5.4.8.1) – Effort is greatest in the north of the area with a distinct line of high effort in statistical rectangles straddling or close to the shelf edge. At the start of the time series a rectangle in the far south east of the area (mouth of the Clyde) had one of the highest recorded levels of effort. This area

was the location for a specific cod fishery now subject to seasonal closures. The reduction in overall effort within this gear category is clear.

TR2 (Figure 5.4.8.2) – It can be seen that vessels using gear in the TR2 category primarily belong to coastal fisheries. These vessels target Nephrops on well defined fishing grounds with muddy substrate. Highest effort is consistently just north of the boundary between management areas 3d and 3c (mouth of the Clyde). Remaining important rectangles are adjacent to the Scottish mainland, in particular between the Scottish mainland and the Outer Hebrides (known as the north and south Minches). The time series shows a contraction of effort in towards these areas of greatest activity.

LL1 (Figure 5.4.8.3) – There is a concentration of effort along the continental shelf edge throughout the time series.

GN1 (Figure 5.4.8.4) – Overall effort recorded for this category is low but LPUE of cod is currently the highest behind the TR gears. Until 2005 effort generally took place offshore and was split between an area in the north west of ICES division VIa and an area to the west of Ireland. Subsequently effort shifted until in 2008 there appeared to be a new concentration of effort in the north of area VIa but now located on the continental shelf edge.

The following are unregulated gear types but given the importance of unregulated gear effort relative to regulated gear effort (see Figure 5.4.8.5) they are shown to provide background information on the three unregulated gear types with highest effort.

PEL\_TRAWL: (Figure 5.4.8.5) – Primarily an offshore fishery, (targeting herring), between 2003 and 2005 greatest effort was expended in the far north east corner of area VIa. Highest effort is at the shelf edge but overall effort has decreased before stabilizing from 2010.

POTS (Figure 5.4.8.6) – Vessels using pots target Nephrops and edible crabs west of Scotland and effort is concentrated in coastal waters of Scotland from the southern border of area VIa north as far as the North Minch. There is no indication of a spatial shift in effort or of a change in overall effort.

DREDGE (Figure 5.4.8.7) – West of Scotland dredge fishing is used to catch scallops. Greatest effort seems to have shifted from the South Minch area to coastal areas further south (including the Clyde) and there is an increase in effort in the south east area in 2012.

Figure 5.4.8.1 West of Scotland. Effort (trawled hours) by ICES statistical rectangle for TR1, 2003-2012. These figures include effort carried out under special condition CPart11.

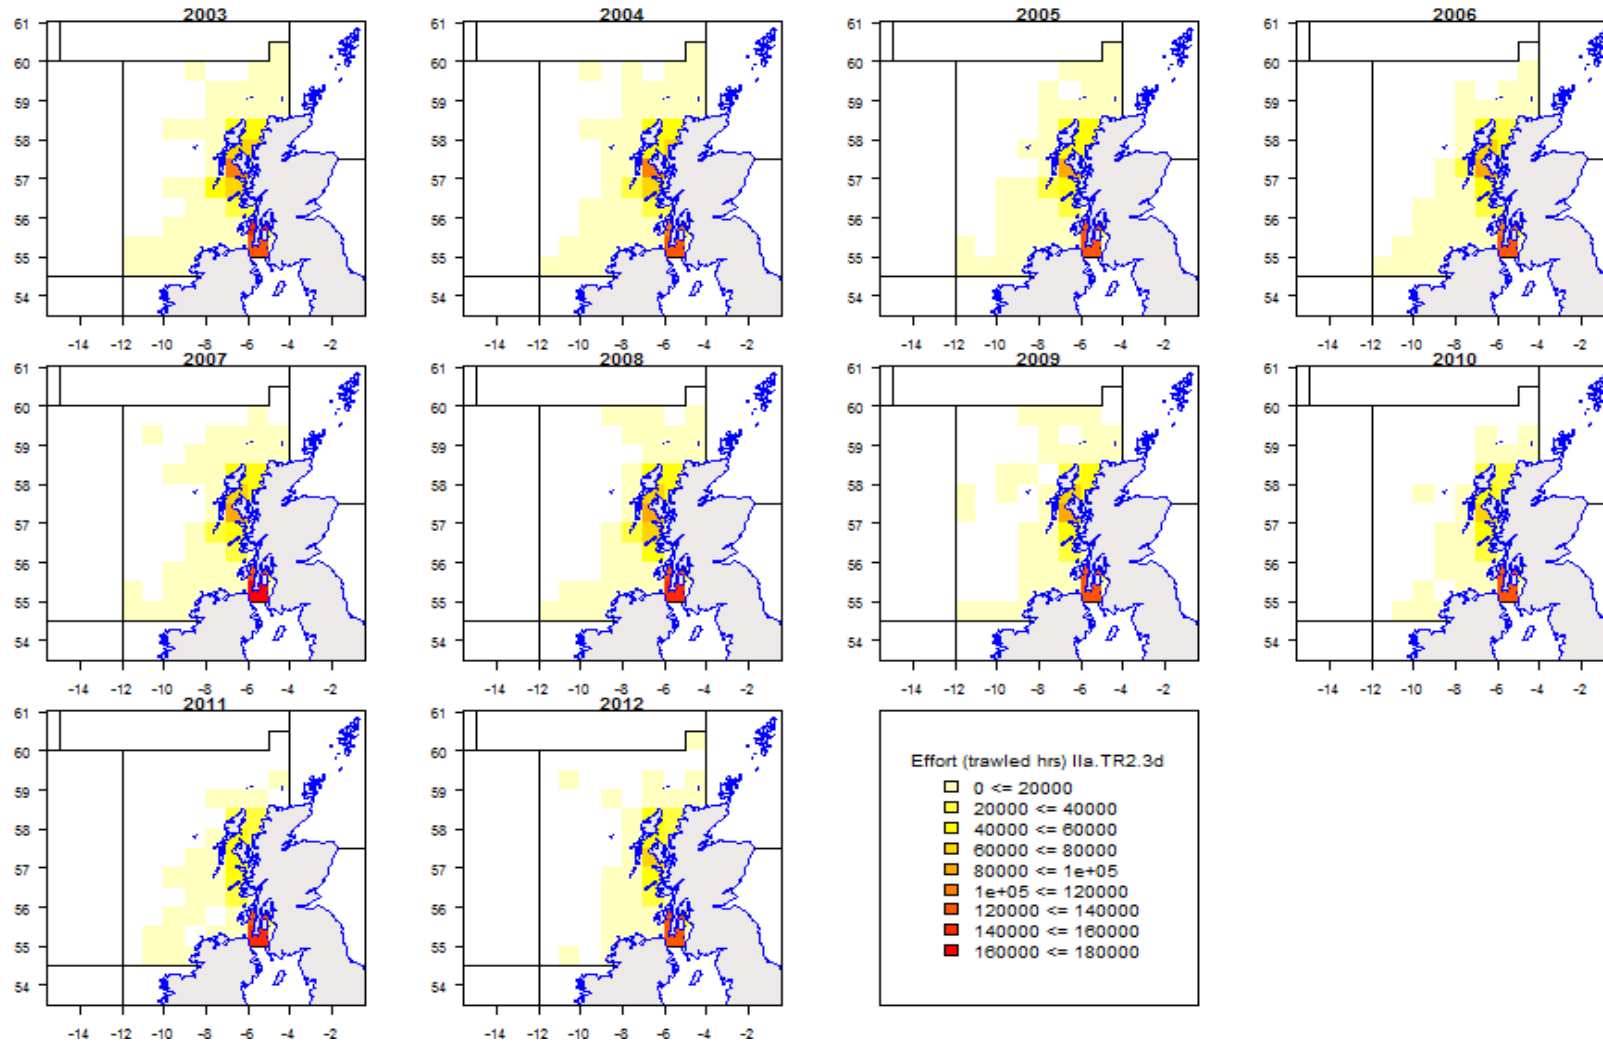

Figure 5.4.8.2 West of Scotland. Effort (trawled hours) by ICES statistical rectangle for TR2, 2003-2012 These figures include effort carried out under special condition CPart11.

#### 5.4.7 ToR 5 Remarks on quality of catches and discard estimates

See tables in section 5.4.2 for values of the discard data quality index and section ## for an explanation of the calculation of the index. A good proportion of the landings submitted to STECF also have discard data for the main gadoid stocks and the two important gears for gadoids west of Scotland. In contrast very little discard sampling is conducted in relation to pelagic fleets.

Discard data for Nephrops has not been supplied to STECF but discard data is supplied to ICES for the purpose of stock assessment. A technical issue exists in supplying to STECF in that Nephrops discards are estimated for sub-areas (Functional Units) and the best way to supply discards for the full management unit area needs to be considered. Very few

Irish data was not disaggregated by mesh size before 2003. Irish vessels contribute to the effort total in management area 3d. According to the international data supplied this constitutes approximately 7-13% of overall effort in the region depending on year (see Table 5.4.1.1).

#### 5.4.8 ToR 6 Estimation of conversion factors to be applied for effort transfers between regulated gear groups

The table of international conversion factors (Table 5.4.8.1) is based on average CPUE (2010-2012). Discard data are scarce for many regulated gear groups but have been interpreted as well representative for TR1 and TR2.

Table 5.4.8.1 West of Scotland. Conversion factors for exchange of effort between gears based on average CPUE 2010-2012. Red cells indicate no discard data included and values are estimated based on LPUE; green cells indicate representative discard information available.

#### 5.4.9 ToR 7 Correlation between partial cod mortality and fishing effort by Member State and fisheries

The STECF EWG 13-06 presents partial fishing mortalities of cod by major fisheries and Member States using the estimated fishing mortality by ICES (2013) and the catches (Table 5.4.13.1), landings (Table 5.4.13.2) and discards volumes (Table 5.4.13.3) in relation to the catch totals supplied to STECF for the year available. The full list of all fisheries can be downloaded from the EWG's web page: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

The anticipated trend in fishing mortality as derived from the cod plan is also presented in Tables 5.4.13.1-3. In the case of the west of Scotland the spawning stock biomass (SSB) was evaluated as well below the limit reference point (Blim) in 2008 and predicted to remain below that reference point by 2010 (the forecast year). Under such circumstances the plan calls for a 25% reduction in F. Without simulations including assumptions on recruitment it is not possible to make quantitative predictions of the response of the SSB to the assumed reductions in F. Therefore in the tables presented it is simply assumed that even with 25% reductions in F the SSB remains below Blim through 2012. The sustainable exploitation target is defined as  $F_{MSY}=0.19$ .

The trends in fishing effort in units of kWdays at sea of the relevant fisheries are also presented in Tables 5.4.13.1-3. The presented parameters r (absolute value of Pearson's coefficient of correlation), numbers of points considered as well as a p value to quantify the statistical significance ( $\leq 0.05$ ) allow conclusions about the quality of the correlation between the partial F and fisheries specific fishing effort. Those values are presented in the Tables 5.4.9.1-3 and resulting regressions are shown in Fig. 5.4.9.1 for major fisheries.

It can be concluded from the estimated F of the stock assessment (Table 5.4.9.1) that the stock is unsustainably exploited with an F more than 2 times higher than the target. Prior to 2006 the fisheries listed contributed a small fraction to the total estimated fishing mortality because of inclusion of unaccounted mortality in the stock assessment. Since then the proportion of total estimated fishing mortality has been much higher. The remainder is due to catch from unregulated gears and differences in the applied methods to estimate discards between ICES and STECF EWG 12-12. The contribution of unregulated gears in 2012 is small and is mainly from those exempt under CPart11.

The metier contributing most to partial F of cod is the Scottish TR1 gear operating under special condition CPart13D (fishing west of the French line). This is true for landings and discards but with discards making a much greater contribution to fishing mortality in recent years. There are no indications that the Scottish TR1 fishery working under any of articles 13.2.B, C or D have contributed to a reduction in fishing mortality of cod west of Scotland.

The correlation between catch partial F and estimated fishing effort is statistically significant for the Scottish TR1 articles 13.2.D metier but negative. It is not significant for the Scottish TR1 articles 13.2.C metier but this could be because some effort was classified as belonging to articles 13.2.B in 2011. Contributions to partial F from other categories are small.

Table 5.4.9.1 Cod west of Scotland (catches). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for catches of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs from total catches of all effort regulated gears to the overall F estimate of the stock.

| Runnig previous year annual F reductions by 25 percent as SSB remains below Blim, Fmsy=0.19 |          |         |       |       |       |       |       |       |       |       |       |       | Effort kW days running previous year baseline |                       |          |          |          |          |          |          |          |          |         |         |         |         |         |         |         |  |

Table 5.4.9.2 Cod west of Scotland (landings). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for landings of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs from landings of all effort regulated gears to the overall F estimate of the stock.

| Runnig previous year annual F reductions by 25 percent as SSB remains below Blim, Fmsy=0.19 |          |          |       |       |       |       |       |       |       |       |       |       | Effort kW days running previous year baseline |       |       |       |       |       |       |       |       |       |                  |          |          |          |         |          |         |          |          |         |         |   |   |   |  |  |

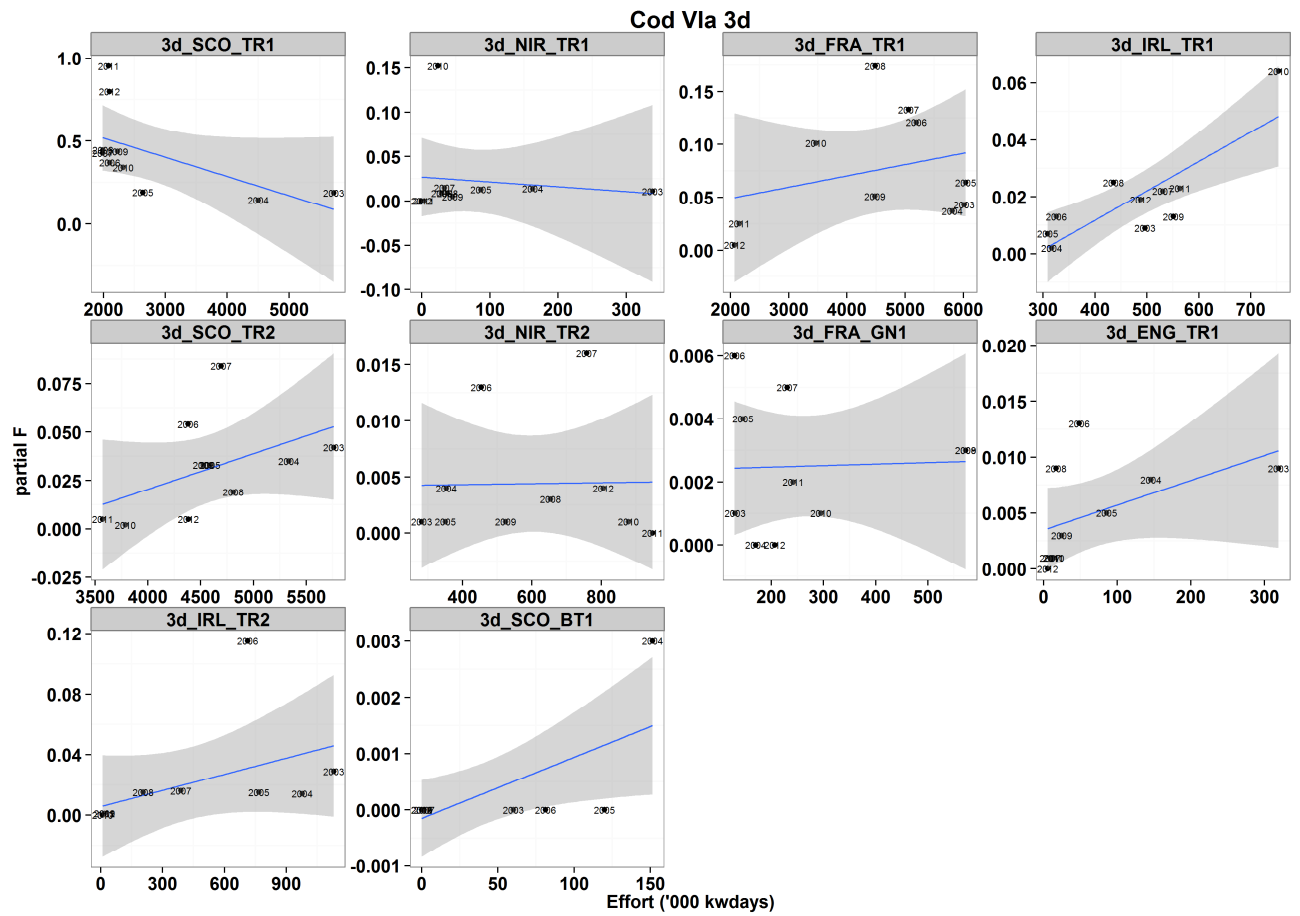

Fig. 5.4.9.1 West of Scotland cod. Regression of partial fishing mortality (based on harvest rate estimates) over effort (kwd) in area 3d of major fisheries, 2003-2012. Frames are listed in order of size of cod catches.

Fig. 5.4.9.2 West of Scotland cod. Time series of partial fishing mortality (based on harvest rate estimates) in area 3d of major fisheries, 2003-2012.

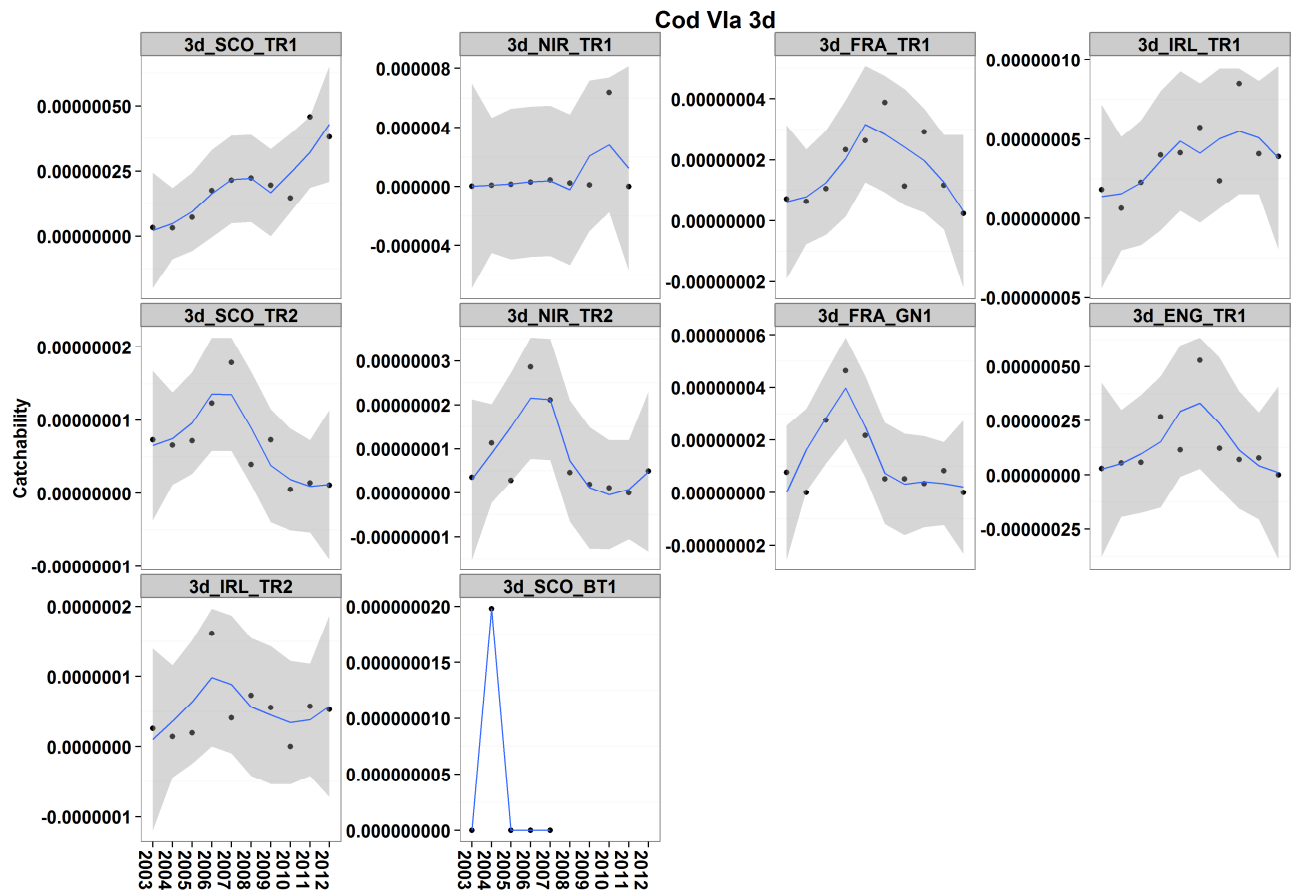

Fig. 5.4.9.3 West of Scotland cod. Time series for partial fishing mortality (based on harvest rate estimates) over effort (kWd) in area 3d of major fisheries, 2003-2012. Data points are circles, a line represents a fitted smoother added to help highlight trends and the grey shading represents  $\pm 2$  standard errors (approx 95% confidence interval).

*5.4.10 ToR 8 Comparative analyses between trends in fishing mortality and fishing effort by Member State and fisheries and the cod plan (R (EC) No 1342/2008) provisions, in particular with regard to Article 13*

Table 5.4.9.1 and Figure 5.4.10.1 show Scottish vessels operating under cod plan article 13D have the most significant partial F of regulated gears and that the partial F from this category has increased from 2011. The high partial Fs are mainly due to discarding (Table 5.4.9.3).

Fig. 5.4.10.1 West of Scotland cod. Time series of partial fishing mortality (based on harvest rate estimates) in area 3d of major fisheries that can be subject to special conditions under cod plan (R (EC) No 1342/2008) provisions, 2003-2012. Note the panels have different scales.

#### 5.4.11 ToR 9 Considerations in order to accomplish spatio-temporal pattern in standardized catchability indices for cod

It should also be noted that estimating catchabilities using landings information can only be meaningful if discarding is low. This is not the case for cod west of Scotland.

## **5.5 Irish Sea effort regime evaluation in the context of Annex IIA to Council Regulation (EC) No 57/2011)**

### *5.5.1 ToR 1.a Fishing effort in kWdays, GTdays, kW and number of vessels by Member State and fisheries*

Effort within the Irish Sea has been compiled for kW\*days-at-sea, GT\*days-at-sea, capacity in kW and numbers of vessels. Within the report focus is on kW\*Days at sea and brief discussion of the newly available capacity. Information on GT\*days at sea and numbers of vessels is available via the website: <Http://stecf.jrc.ec.europa.eu/web/stecf/ewg06>

Data submissions covered a variety of data ranges, some nations going back to 2000, others to 2009 and some 2012 only. However, much of the data remains relatively consistent with last year, those with changes are detailed in Tables 5.5.1.1 many of the variations are the result of improvements within national databases.

Tables 5.5.1.2 and 5.5.1.3 detail nominal effort, in kW\*days-at-sea, by nation and then aggregated by gear and special condition according to Annex I of Coun. Reg. 1342/2008 (new cod plan). These tables show a 37% decline in Irish Sea nominal effort since 2000, the majority of which occurred between 2003 and 2009, since 2009 effort has declined by 3%. In relation to effort by gear, discussions are primarily focused on data from 2003 onwards. This is due to the unavailability of Irish mesh size information prior to 2003 resulting in Irish effort occurring within the 'none' category which encompasses unidentified effort and effort by gears and mesh sizes not regulated under the cod plan. See below for further description of this category.

Irish Sea fisheries are predominantly demersal trawling and seining (TR group). Combined, TR effort mirrors the overall effort trend (Figure 5.5.1.1) representing 55-60% of total Irish Sea effort. This includes the small (2-5%) of effort excluded from effort regulation in the last three years. As part of regulated gears, the TR group accounted for over >70% from 2003 and >80% from 2008. Within the TR group, the TR2 category (70-99mm mesh sizes) dominates (Table 5.5.1.3 and Figure 5.5.1.2), and effort had been relatively stable between 2003 and 2008. An effort reduction occurred in 2009, coinciding with the introduction of the current cod plan, since then effort has remained at the reduced level. The majority of TR2 effort is now carried out under Article 13 of Coun. Reg. 1342/2008 (CPart13; Figure 5.5.1.3). CPart13 was submitted in 2013 broken down into its constitute parts (Figure 5.5.1.4), much of the effort began as category c (avoidance) but this looks to have switched to category b (<5% cod). In addition an amount is under category a (technical changes) relating to the use of the Swedish grid by the Nephrops fishery. A small amount of effort previously incorporated in CPart13 became exempt from the cod plan effort restrictions under Article 11 of the regulation (CPart11) since 2010, 2-5%. Effort within TR1 ( $\geq 100$ mm mesh sizes) is currently at a very low level. This group underwent a large decline in effort between 2003 and 2007, since then effort has continued to decline at a slower rate. The majority of TR1 was assigned to CPart13 categories in 2009-2011 (~80%), while in 2012 effort exited CPart13 into the no special condition category.

Beam trawling, solely BT2 in the Irish Sea, declined greatly between 2003 and 2008. The gear has continued at a low level over the last three years (accounting for 10% of Irish Sea effort), and is currently indicating a slight decrease (Table 5.5.1.3). Note, Belgium beam trawl effort within the Irish Sea contains assumed mesh sizes, as described in Section 4. Of the remaining regulated gears, gillnetting occurs at

very low levels <0.5% (Figure 5.5.1.1) while GT1 and LL1 show negligible effort accounting for less than 0.5% of total effort.

Category 'none none' represents gear types and mesh sizes not regulated by Coun. Reg. 1342/2008 effort restrictions. This category includes effort assigned to special condition CPart11 which is exempt from effort restrictions through the use of cod avoidance measures (discussed above). A large proportion of the 'none none' group prior to 2003 was due to Irish effort reported without mesh size information. Once Irish mesh size information became available in 2003, the 'none' category decreased substantially. Effort within this category has increased over the last seven years and currently accounts for 37% of Irish Sea effort. these increases primarily result from dredge and pot activity (Figure 5.5.5.1), in addition to the appearance of CPart11 effort within this category. Low levels of effort also occur within the pelagic trawl category.

Capacity was submitted at the highest level of aggregation and summations across certain groups are misleading due to double counting of vessels active within the area over multiple metiers, years or quarters. The annual values presented here and available on the website are the maximum capacity of a quarter. Data was only available for all those active within the Irish Sea for 2012, therefore it is not possible to make comment on area trends. However, regulated gears (Table 5.5.1.5) and unregulated gear capacity (Table 5.5.1.6) can be observed for those nations submitting a time series.

Table 5.5.1.1. Irish Sea relative differences in nominal effort (kW\*days at sea) to 2012 submissions by Member State by Annex I, Coun. Reg. 1342/2008. Only those differing combinations are displayed. Sorted by gear, derogation (SPECON), and country.

### *5.5.2 ToR 1.b and c Catches (landings and discards) of cod and non-cod species in weight and numbers at age by fisheries*

Table 5.5.2.1 lists the landings and available discards for the main species by gear groups relating to Coun. Reg. 1342/2008. For the reason of space limitation of this report, the following sections represent the landings in weight for monkfish (ANF), cod (COD), haddock (HAD), Nephrops (NEP), plaice (PLE), rays (RAJ), sole (SOL), and whiting (WHG). Additional data queries for other species may be provided depending on data provisions of the national catches by the experts or national institutes. The data given in the table forms the basis of Figure 5.5.2.1 displaying the relative landings compositions by gear groups for the years 2003-2012.

Discard information available within the Irish Sea is incomplete. Discard data is not available for all species and/or years within each gear grouping. TR2 and BT2 have the most complete data particularly in more recent years, for species such as cod, haddock, plaice, rays, and whiting. Some discard data is also available for the CPart13 and CPart11 categories, however, the method of raising used at the national level to generate these discard values tend not to be specific to these categories and thus not a true representation of the category discards. Availability of discard information is sporadic in TR1. No gillnet or longline discard information for the Irish Sea was provided to the group.

In relation to overall landings by species, Nephrops dominate Irish Sea landings and have been above 9kt since 2007, peaking in 2008 with over 10kt. Total landings have reached this level again in the last two years following increases. Plaice and anglerfish landings demonstrate a period of decline prior to 2011 when landings increased, this trend continued in 2012 while plaice did not. Haddock and sole have fluctuated in the last five years (~850t and 300t respectively). In addition, whiting landings declined in 2012. Cod landings have continued to follow the declining trend which began in 2009 and now total over all vessels 325t (-56% since 2009, -65% since 2003).

Below the primary gear categories with landings from the Irish Sea are discussed. As a first note, inaccurate area reporting of cod from ICES rectangles immediately north of the Irish Sea–Celtic Sea boundary (ICES rectangles 33E2 and 33E3) is known to be an issue for Ireland, with ICES division VIIg cod catches being reported into the southern Irish Sea. This primarily relates to gillnet and otter trawl gear types. WGCSE has reallocated cod from VIIa to the Celtic Sea for a number of years, ranging between ~50t and >500t annually since 2004. This inaccurate reporting has not been corrected for within the data provided to the EWG.

Nephrops are the primary focus of the TR2 category (Figure 5.5.2.1, note the figure excludes CPartII whose target species is Nephrops). Other components of the TR2 category occur at comparatively low levels, including cod, haddock, whiting, plaice, and anglerfish. This category has consistently accounted for around a third (26%-40%) of cod landings from  $\geq 10\text{m}$  vessels (less when considering  $< 10\text{m}$  landings). Discarding of haddock, plaice and whiting occurs within this gear category and can be high in some years.

The species composition of TR1, the larger mesh size group, is very different to TR2, containing virtually no Nephrops. Landings primarily consist of cod and haddock, with lower quantities of hake. A variety of other species occur at low levels including, plaice and whiting (Figure 5.5.2.1). Cod landings by this category have been more variable than TR2, declining in recent years. Currently accounting for less than a third of cod landings in 2012 (25% including  $< 10\text{m}$  landing). TR1 consistently accounts for the majority of both haddock and hake landings.

Beam trawls operating within the Irish Sea belong solely to the BT2 (80-119mm) category. Belgium (and the Netherlands) beam trawls are assumed to have used the minimum mesh size group 80-89mm (Sec. 4). No assumptions are made for the remaining nations. The species composition of this category is stable, dominated by sole, plaice, and rays. The proportion of the latter had increased over 2010 and 2011 yet declining in 2012. Plaice landings increased in 2011 and levelled out in 2012 whilst sole has been stable in most recent years (Figure 5.5.2.1). Low level landings of anglerfish, cod, and haddock (~5%, or less) are also landed. Beam trawling accounts for over 50% of plaice landings, as well as the majority of sole landings (~90%) from vessels  $\geq 10\text{m}$ . Although plaice is a target of this gear category, in recent years discarding has increased from ~30% to nearing 50% (with reasonable submission of discard data), while <5% sole is thrown back (note, 2012 data quality was poor).

The primary target of Irish Sea gillnets is cod, which currently constitute ~50% of the low level landings (Figure 5.5.2.1). Although the main target of this gear category is cod, landings are low and in most years account for  $\leq 15\%$  of total Irish Sea cod landed. Landings from 2007 and 2008 were over double other years. Pollack are also landed in low levels along with a variety of other species.

Landings by unregulated gears within the Irish Sea (Table 5.5.2.2) are dominated by pelagic, dredge and pot species, specifically herring, scallops, and crab species. this group now also includes vessels operating under exclusion from the regulation (CPart11). Under this category there are high landings of Nephrops and little else (<4t of all other species), as would be expected. Unregulated gears show consistently low cod landings (<1.5t) since 2009.

Cod numbers by age are not described or presented within this section, however values for this within the Irish Sea are available from the website.

Table 5.5.2.1 Irish Sea. Landings (t), discards (t) and discard rate by species, gear and special condition according to Coun. Reg. 1342/2008, 2003-2012. For landings, discards and discard rates by Country refer to the website.

Figure 5.5.2.1 Irish Sea. Landings (t) by gear according to Coun. Reg. 1342/2008 and species, 2003-2012. N.B. CPart11 effort is excluded from this plot.

### 5.5.3 ToR 1.d CPUE and LPUE of cod by fisheries and by Member States

Only a LPUE (landings per unit effort) time series is presented for cod (Table 5.5.3.1) as discard data is not consistently available for all years or all categories, resulting in distorted CPUE trends. Catch per unit effort may be available for some years/gears on request. The units used are grams per kW days-at-sea (g/kW\*days). Gear groups with little effort, and static gears where the use of kW\*days-at-sea as an appropriate indication of effort is debatable, may have unrepresentative values and are not discussed.

Cod LPUE values are highest within the GN1 category, which peaked in 2007-2008 (Table 5.5.3.1 and Figure 5.5.3.1). Ireland is the primary nation influencing this trend. However, this category may have unrepresentative values given the effort uncertainty, which may also be the explanation for the large LL1 LPUE in 2008. Furthermore, in some years area misreporting by Irish cod gillnetters has been an issue in the Irish Sea, likely to result in false inflation of the LPUE for this gear grouping.

Gillnetting is a small fleet within the Irish Sea. The most significant cod landings and effort occur within demersal trawl and seine categories TR1 and TR2. Over the period TR1 LPUE increased over the earlier years to 2009. LPUE levels have since varied, being lower in 2012 for all of the sub categories. Note that the LPUEs are higher in the CPart13b and CPart13c categories than the no special condition. The TR2 LPUE are lower than the TR1 group. LPUE has been increasing for the no special condition category although now little to nominal effort is directed to this group. The majority of effort is under CPart13a, CPart13b, CPart13c, the LPUEs for each of these are far lower than the none category. CPart11 show zero LPUE of cod.

Tables showing LPUE and CPUE by gear groups (regulated and unregulated), area and nation are not presented in this report but are available on the JRC website:

<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

Table 5.5.3.1 Irish Sea. Cod LPUE (g/(kW\*days)) by gear group according to Coun. Reg. 1342/2008 and year, 2003-2012. CPUE data is limited, but can be made available if requested.

Figure 5.5.3.1. Irish Sea. Trends in cod LPUE (g/kW\*days) by the average top four gear groups associated with Coun. Reg. 1342/2008, 2003-2012.

#### 5.5.4 ToR 2 Rank regulated gear groups on the basis of catches expressed both in weight and in number of cod

Ranked landings (Table 5.5.4.1) in weight for cod have been used. Catch rankings have not been presented as discard data are not consistently available for all years or all categories introducing bias into the ranking. Information on ranked catches may be available on request.

Over the majority of the period, TR1 land the greatest proportion of cod (~40%), however this changed in 2011 when the continuing declining trend first fell below the proportions of TR2. This placed TR2 as the top ranked gear from 2012 which has shown only a small variation in proportions since 2010. The BT2 contribution increased in 2011 to 15% continuing in 2012. This proportion is slightly higher than those of gillnetting (~15%).

In the average ranking (2010-2012), the previous order of TR1, TR2, GN1 and BT2 remains unchanged.

Table 5.5.4.1 Irish Sea. Ranked derogations according to relative cod landings in weight (t), 2003-2012. Ranking is according to the year 2012. N.B. CPart11 effort is excluded from this plot.

### 5.5.5 ToR 3 Information on small boats (<10m)

It should be noted that under 10m vessels are not required to report effort levels in the same way as larger vessels. As such not all nations operating within the Irish Sea have been able to provide this information. Presented is information from England (including Northern Ireland), France (last 3yrs) and Scotland. The methodology for production of this data may vary between nations. For details, refer to the national data descriptions in Section 4.

#### 5.5.5.1 Fishing effort of small boats by Member State

The majority of effort by the under 10m vessels reported here is directed at pots and traps (Table 5.5.5.1.1). The effort levels increased greatly in 2006 due to the introduction of buyers and sellers notes into the UK who have used these to estimate effort. Under 10 effort dropped during 2009 and 2010, increasing again thereafter. Dredge effort has been increasing in recent years now occurring at similar levels as TR2 gear. The later utilised within the Irish Sea at fluctuating levels well below pots.

Table 5.5.5.1.1. Irish Sea trends in nominal effort (kW\*days at sea) of under 10m vessels by gear groups of Annex I, Coun. Reg. 1342/2008 and unregulated gears, 2000-2012. National data qualities are summarised in Section 4.

#### 5.5.5.2 Catches (landings and discards) of cod and associated species by small boats by Member State

Table 5.5.5.2.1 provides landing, discard and discard rate data for vessels under 10m, including data from England (inc Northern Ireland), France, Ireland, and Scotland, for the main species landed. Irish under 10 meter vessel landings are not recorded by gear type, therefore fall into the “none” category. Under 10m vessels in the Irish Sea land edible crab (CRE) in the greatest quantity, previously over 1,000t per year having increased to over 2,000t in the last two years. This was substantially lower in 2009. Scallops, sprat, spider crab, Nephrops and herring dominate the remainder of landings reported to the group. Comparatively small, and variable quantities of cod are landed, ~30t in 2010 and 2011, ~46t in 2012. Where gear type is available, landings primarily originate from "none" (all Irish landings in this category), pots, and dredges. Irish under 10m vessels are likely to employ a similar gear distribution.

The under 10m vessels contribute only a small proportion to the total Irish Sea cod landings. Regulated gears typically account for >90% with the exception of 2012 where this fell to 85%. In recent years, <1% of landings come from unregulated  $\geq 10$ m vessels.

Table 5.5.5.2.1. Irish Sea. Landings (t), discards (t) and discard rate for the top 10 species landed in 2012 by gear according to Coun. Reg. 1342/2008 categories for under 10m vessels, 2003-2012. For landings, discards and discard rates by Country refer to the website. N.B. this table contains a select list of species.

#### *5.5.6 ToR 4 Spatio-temporal patterns in effective effort by fisheries*

Spatial figures of effort for the Irish Sea concentrate on those categories identified as significant in recorded effort, and/or cod catches. Figures use a common scale across years for a given gear group, but scales are unique to each category such that the colours assigned to statistical rectangles for gear group TR1 can not be compared directly to those assigned for TR2 say.

TR1: At the beginning of the presented time series, TR1 effort was focused across the Northern boarder and western Irish Sea. Subsequently effort has declined to an overall low level. In 2011 this was limited to the northern and western areas, expanding across the whole area again in 2012 (Figure 5.5.6.1).

TR2: Clear TR2 effort focal points occur within the Irish Sea, coinciding with areas of mud based substrate, with most effort occurring in the Western Irish Sea across two rectangles. In addition, there is an additional secondary focus in the Eastern Irish Sea. Over the period there has been a reduction in effort, with indications of this in the contraction of both focus areas (Figure 5.5.6.2).

BT2: This gear has shown a marked contraction in fishing areas and effort reduction within the Irish Sea (Figure 5.5.6.3). Two of the three focus areas which were present in 2003 still occur in 2011. The southern most focus had reduced to background effort levels a number of years ago reappeared again in 2012.

GN1: The measure of spatial effort submitted in the data call is not considered appropriate for application to static gears. However, the figure for gillnet effort is provided here as an indication of spatial distribution as this gear category can contain relatively high cod catches. Gillnet effort distribution has been changeable over the period, although current focus is in the eastern Irish Sea above Wales (Figure 5.5.6.4). This focus increased in 2012.

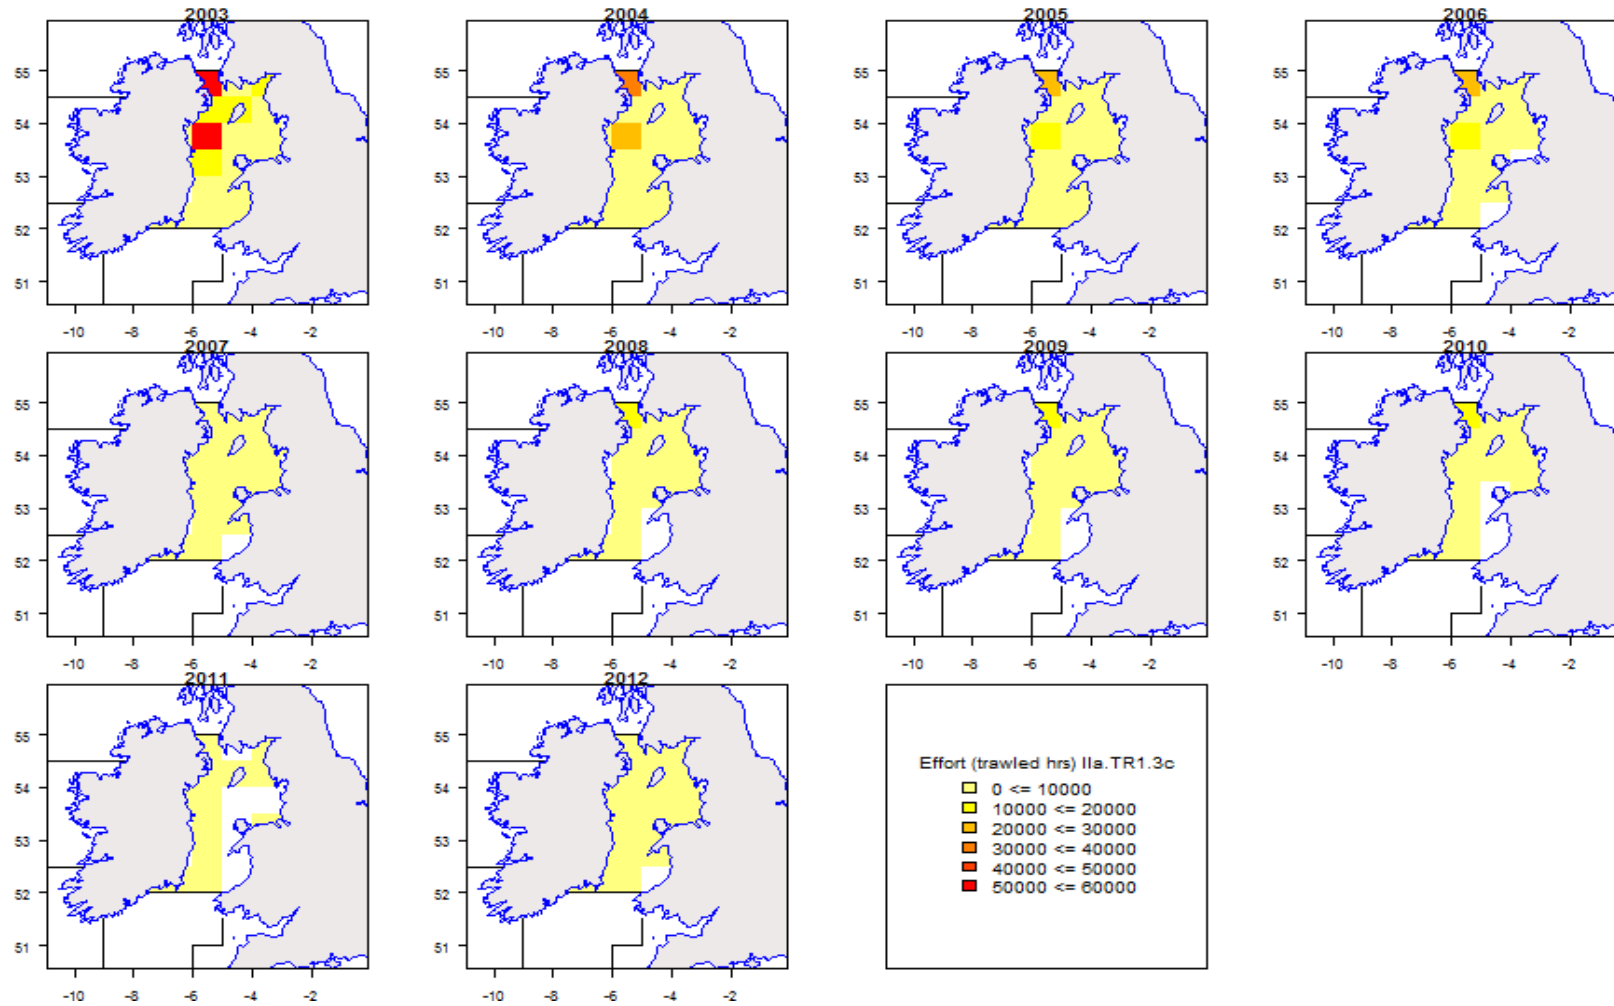

Figure 5.5.6.1. Irish Sea. Spatial distribution of effort (trawled hours) by ICES statistical rectangle for TR1, 2003-2012. N.B. These figures include effort carried out under special condition CPart11.

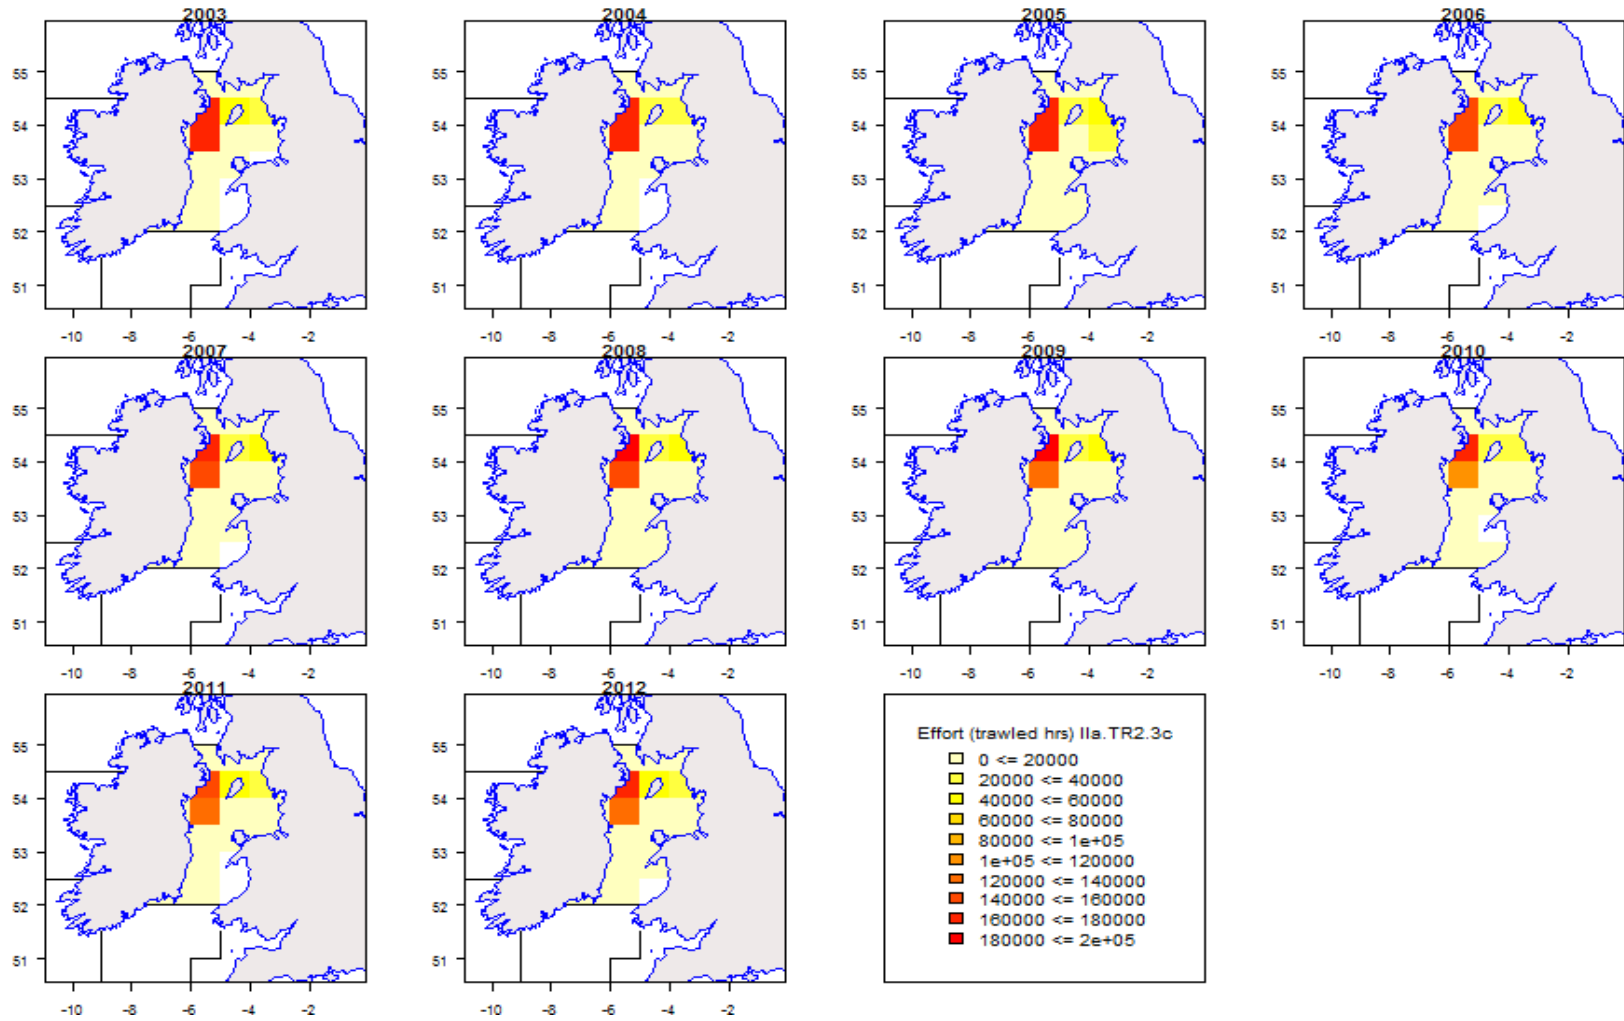

Figure 5.5.6.2. Irish Sea. Spatial distribution of effort (trawled hours) by ICES statistical rectangle for TR2, 2003-2012. N.B. These figures include effort carried out under special condition CPart11.

Figure 5.5.6.3. Irish Sea. Spatial distribution of effort (trawled hours) by ICES statistical rectangle for BT2, 2003-2012.

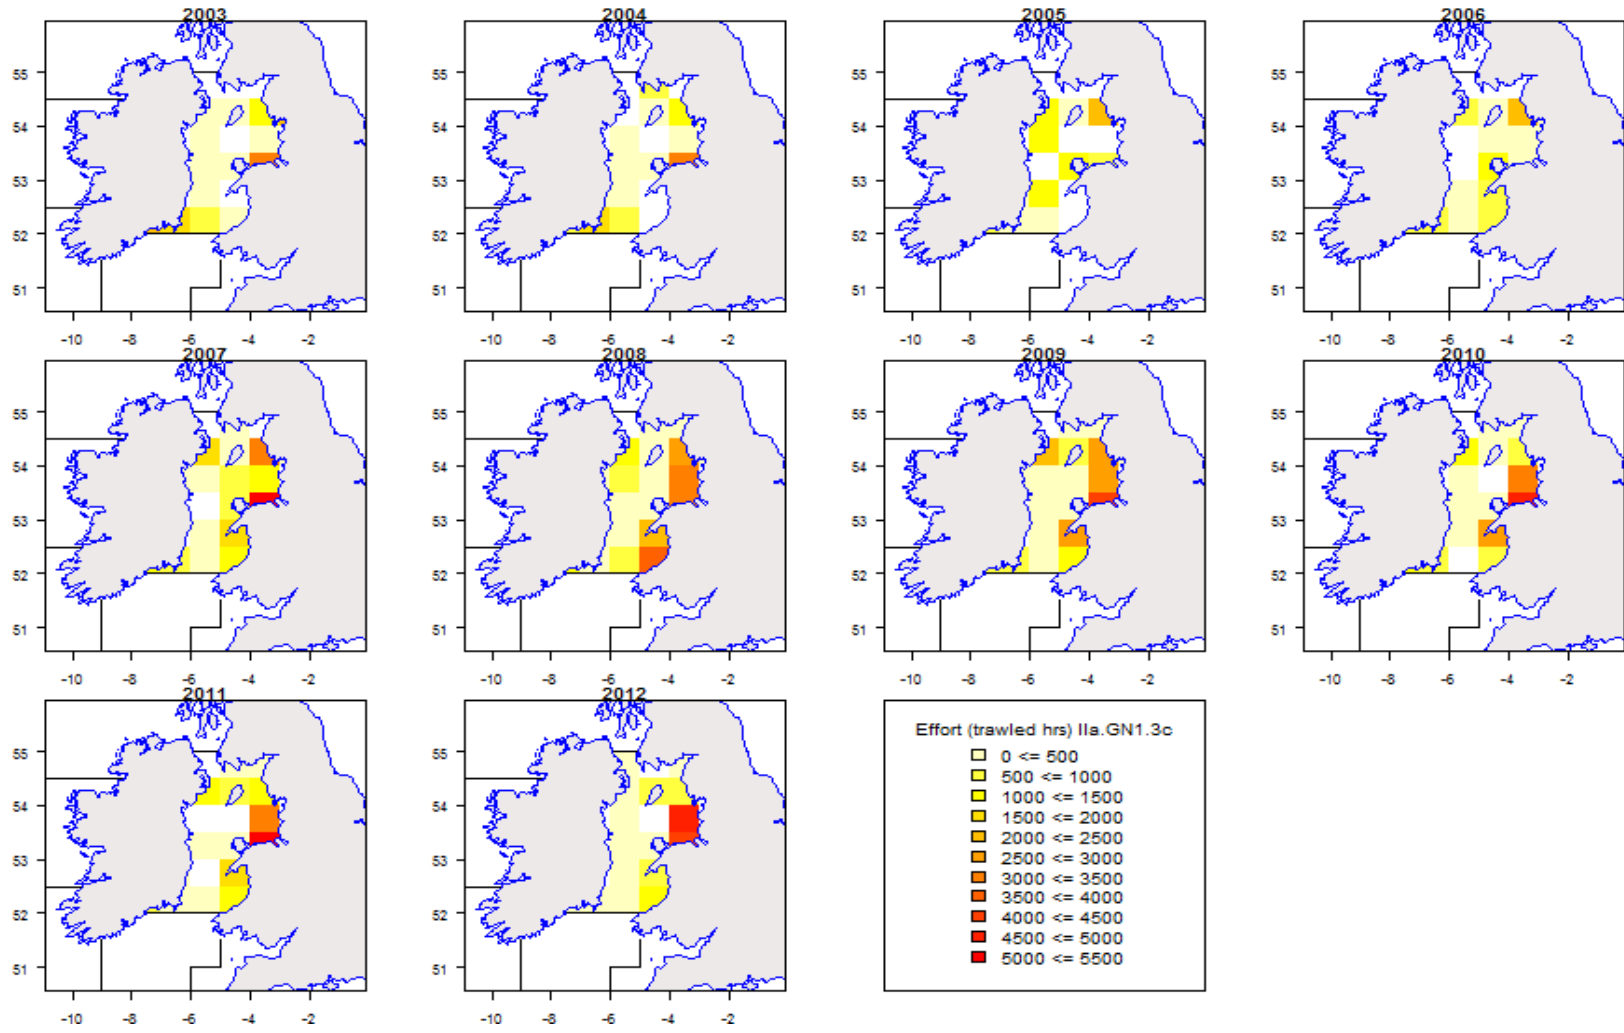

Figure 5.5.6.4. Irish Sea. Spatial distribution of effort (trawled hours) by ICES statistical rectangle for GN1, 2003-2012.

### 5.5.7 ToR 5 Remarks on quality of catches and discard estimates

Discard information is scarce for a number of gear categories. Where discard data is available it is considered to be highly variable and inaccurate.

No unexpected evolutions in effort or catch trends by Member state or fishery were observed in the addition of 2011 data.

### 5.5.8 ToR 6 Estimation of conversion factors to be applied for effort transfers between regulated gear groups

The table of international conversion factors (Table 5.5.8.1) is based on average CPUE (2010-2012). LPUEs are used for GN1, GT1, LL1 and TR1 fisheries as time series of discard data were not available. TR2 and BT2 are the only two gear categories where discard data was available over the three previous years. A one to one ratio can be seen for BT2 to TR2, but the reverse exchange is lower.

Table 5.5.8.1 Irish Sea. Conversion factors for exchange of effort between gears based on average CPUE 2010-2012. Red cells indicate no discard data available; yellow cells indicate discard information available.

|        | BT2   | GN1   | GT1   | LL1 | TR1   | TR2   | CPUE | LPUE | factor =                   |
|--------|-------|-------|-------|-----|-------|-------|------|------|----------------------------|
| 3c BT2 |       | 0.03  | 0.081 | 1   | 0.172 | 1     | 92   | 59   | if factor > 1 then         |

### 5.5.9 ToR 7 Estimation of partial fishing mortalities of cod by area, Member State and fisheries and correlation between partial cod mortality and fishing effort by area, Member State and fisheries

The STECF EWG 13-06 presents partial fishing mortalities of cod by major fisheries and Member States in relation to the estimated fishing mortality by ICES (2013) and landings (Table 5.5.9.1) in relation to the estimated total catch for the year available. The full list of all fisheries can be downloaded from the EWG's web page: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>. The anticipated trend in fishing mortality as derived from the cod plan is also presented in the following Tables 5.5.9.1. The sustainable exploitation target is defined as  $F_{MSY}=0.4$ . The trends in fishing effort in units of kW days at sea of the relevant fisheries are also presented in Tables 5.5.9.1. The presented parameters  $r$  (value of Pearson's coefficient of correlation), numbers of points considered, as well as a  $p$  value to quantify the statistical significance ( $\leq 0.05$ ) allow conclusions about the quality of the correlation between the partial  $F$  and fisheries specific fishing effort. Those values are presented in the Tables 5.5.9.1 and resulting regressions are shown the Fig. 5.5.9.1 for major fisheries.

It can be concluded from the estimated F (Table 5.5.9.1) that the stock is unsustainably exploited with an F 3 times the  $F_{msy}$  without considering discarding. The fisheries listed within the table contribute around 90% to the total estimated fishing mortality in 2008, which is based on landings only. The landings contribution then drops to only 14% in 2012, the remainder being due to ICES estimates of unallocated mortality.

STECF EWG 13-06 notes that the correlations between the summed partial Fs for landings of the regulated fisheries and their estimated fishing efforts are non-significant. The partial landings Fs of most Member State fisheries using regulated gears are not significantly correlated with their specific effort estimates.

Table 5.5.9.1 Cod Irish Sea (landings). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for landings of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. Cod plan article 13 assignments apply since 2009 or 2010, as interpreted from the background documents of national declarations. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs from landings of all effort regulated gears to the overall F estimate of the stock.

| Runnig previous year annual F reductions by 25 percent as SSB remains below Blim, Fmsy=0.4 |          |          |       |       |       |       |       |       |       |       |       | Effort kW days running previous year baseline |      |      |      |      |         |         |         |         |         |

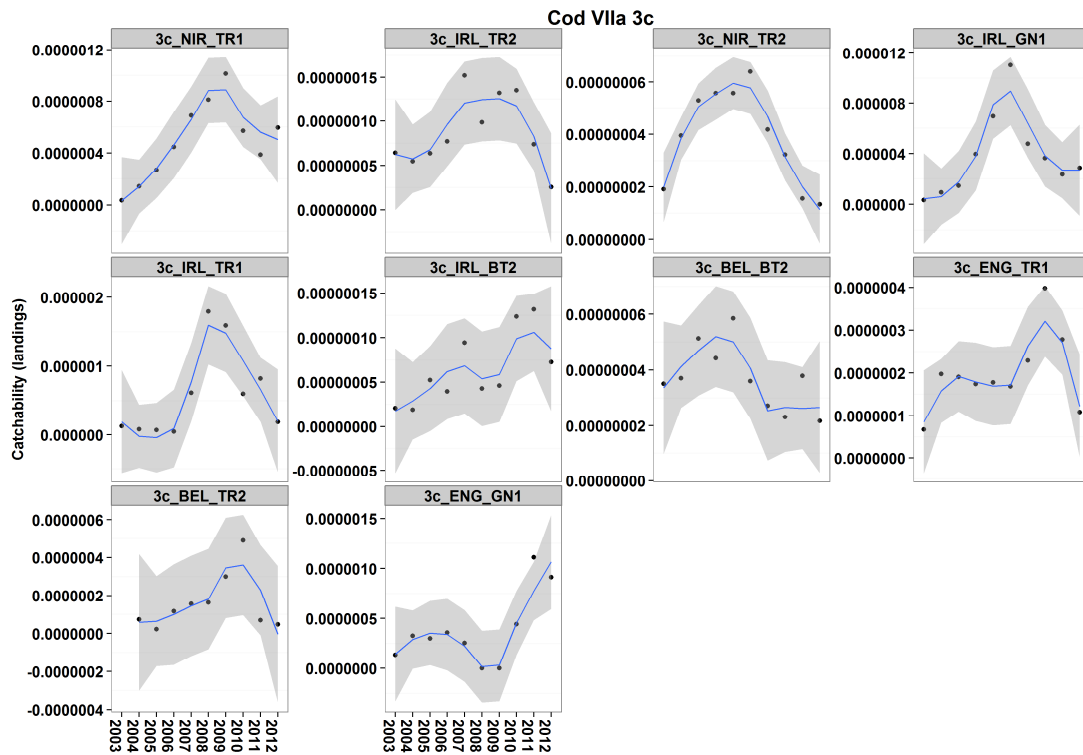

Fig. 5.5.9.1 Irish Sea cod. Partial fishing mortality (based on harvest rate estimates, landings only) over effort (kWh) in area 3c of major fisheries, 2003-2012. R = Pearson's coefficient of correlation, p value from two tailed to quantify the statistical significance ( $\leq 0.05$ ). Note that the panel called combined fleets includes all regulated and unregulated fisheries and that the trends of the fisheries are not separated by special conditions.

Fig. 5.5.9.2 Irish Sea cod. Partial F landings of major fisheries, 2003-2012.

5.5.10 *ToR 8 Comparative analyses between trends in fishing mortality and fishing effort by Member State and fisheries and the cod plan (R (EC) No 1342/2008) provisions, in particular with regard to Article 13*

STECF EWG 13-06 is unable to conduct the requested analyses due to data deficiencies, in particular the lack of discard data.

## **5.6 Celtic Sea effort regime evaluation for fisheries which would be affected by the extension of the cod management plan**

### *5.6.1 ToR 1.a Fishing effort in kWdays, GTdays and number of vessels by area, Member state and fisheries*

While there is no effort regulation in the Celtic Sea at present, the analyses below consider the same gear and mesh categories as used in the cod plan management plan (Council Regulation No. 1342/2008). Table 5.6.1 lists the trends in effort by gear and mesh categories by country in kW\*days. Information on GT\*days at sea and the number of vessels active in Celtic sea are not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

The following sections are subdivided into the whole Celtic Sea, the ICES sub-divisions 7bcefghjk (Cel1) and the subset of ICES subdivision 7gh (Cel2).

STECF EWG 13-06 notes that Spanish data has been provided for periods before 2012; as such the time series of effort and catch is incomplete. The inclusion of Spanish data for 2012 mainly affects fisheries with Long-lines (LL1), otter trawl and seines (TR1, TR2) and to a lesser extent Gillnets (GN1), and predominately in the wider Celtic Sea (7bcefghjk (Cel1), with only small amounts of effort in the sub-set divisions 7fg (Cel2).

#### **5.6.1.1 ICES sub-divisions 7bcefghjk (Cel1)**

Table 5.6.1.1.1 show fishing effort (kw days at sea) by Country, Gear type and Special condition (as defined for the cod management plan) for ICES sub-divisions 7bcefghjk. In recent years fishing effort by the main gears/countries has been relatively stable, though in 2012 there was an increase in BT2 effort by Belgian fisheries, related to increased sole and anglerfish landings (Table 5.6.2.1.1).

Table 5.6.1.1.1 Trend in effort (kW\*days at sea), according to cod plan gear definition and Member State, 2003-2012. Note, data for Celtic Sea 7bcefgjhk (Cel1)

Effort contributions by vessels operating in the entire Celtic Sea 7bcefghjk (Cel1) from different nations are shown in Figure 5.6.1.1.1. Values for 2012 only are shown, in order to include Spanish data in the analysis. In terms of kW\*days, France contributed 38 %, Ireland 22%, England and Wales 17%, the Netherlands 6%, Belgium 5%, Scotland 4%, Spain 4%, Germany 3% and Denmark 2% (2012).

Figure 5.6.1.1.1. Contribution of each country (countries fishing less than 1% of the total catches were excluded from the figure) to the total effort (kW days at sea) in the Celtic Sea (7bcefghjk) in 2012 (Cel1).

Figure 5.6.1.1.2 shows the proportion contribution of defined gear groups to the total effort in 2012. It shows that the two main gear categories as regulated under the cod plan are TR1 and TR2. TR1 contributes 25% to the reported fishing effort in 2012, TR2 18% and BT2 12%.

The gear classed as “non-regulated” are dominated by pelagic trawls (19%) and in to a lesser extend dredges (7%) and pots (5%).

Figure 5.6.1.1.2. Contribution of each gear category to the total effort (kWdays) in the Celtic Sea (ICES Divisions VIIbc,e-k) in 2012.

The fishing effort in kW days at sea of “unregulated” gears accounts for about 34% of the total effort in the Celtic Sea. Figure 5.6.1.1.3 shows fishing effort by gear type for gear defined as unregulated under the cod management plan (left) and defined as regulated (right).

For “unregulated” gears most of the effort is Dutch, French, Danish and Irish pelagic trawl fisheries, with a recent (since 2009) increase of Danish and Irish pelagic boats fishing for boarfish in the Celtic Sea. There was a decrease in fishing effort by unregulated gears in 2011, with a slight increase again in 2012.

For “regulated” gears, over the period 2003-2012 there was a decline in overall effort, including the dominant otter trawl and seine gears. In recent years fishing effort has been relatively stable, with the increase in 2012 due to the inclusion of Spanish data for this year only, with total effort by countries excluding Spain stable overall.

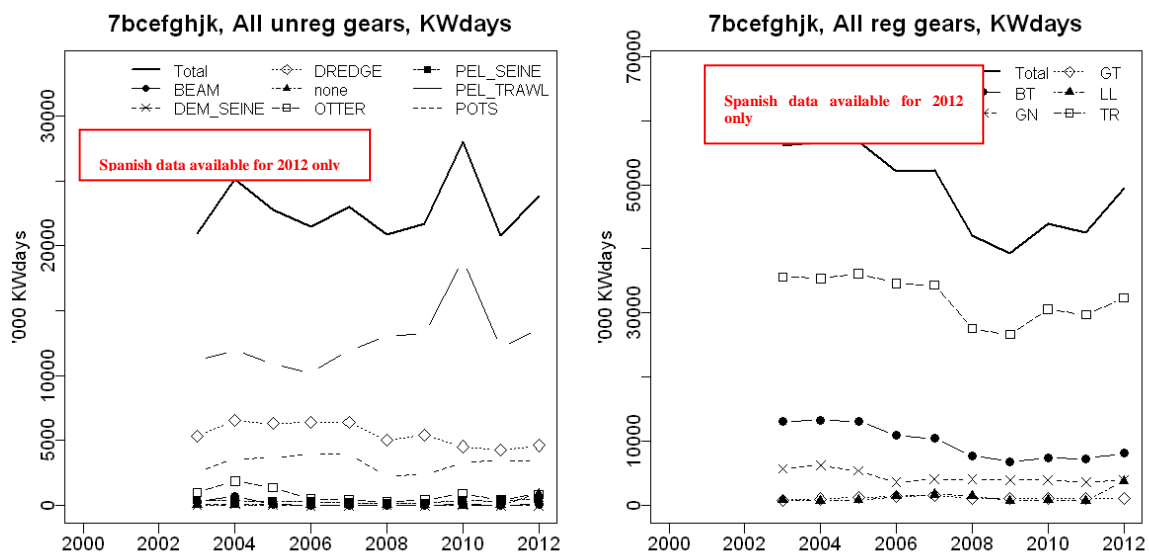

Fig. 5.6.1.1.3. Trend in nominal effort (kW days at sea) for unregulated gears in the Celtic Sea, 2003-2012 (left) and gears as defined as regulated by the cod management plan (right).

Figures 5.6.1.1.4-5 show the recent trends in nominal effort for the various gear categories and mesh size in the Celtic Sea.

Figure 5.6.1.1.5 (left) shows trends in effort by otter trawl and seine gears. The long term trend (since 2003) has seen a decline in effort by these gears. Since 2009 there has been an increase in the use of the larger mesh (TR1) and a decrease in the smaller mesh (TR2). For Beam trawl gears (Figure 5.6.1.1.5, right), only the smaller mesh BT2 has any significant effort and there has been a 38% decrease in effort by this gear over 2003-2012. In recent years (since 2009) effort by the gear has been increasing, with an increase in of 11% in 2012 compared to 2011.

Figure 5.6.1.1.5 shows trends in effort by Gillnet (GN1), Trammel Net (GT1) and Longline (LL1) fisheries. The increase in longline effort in 2012 is related to the inclusion of Spanish data only for this year.

Fig. 5.6.1.1.4. Trend in nominal effort for demersal trawl (Regulated Gear TR1, TR2 and TR3; left) and beam trawl by mesh size range (Regulated Gear BT1, BT2; right) in the Celtic Sea (ICES Divisions VIIbc,e-k), 2003-2012.

Fig. 5.6.1.1.5. Trend in nominal effort for Regulated Gear GT, GN1, LL1) in the Celtic Sea (ICES Divisions VIIbc,e-k), 2003-2012.

### 1.1.1.2 ICES sub-divisions 7fg (Cel2)

Table 5.6.1.2.1 shows trends in effort in ICES sub-divisions 7fg by gear type and Member State. Trends broadly reflect those from the wider Celtic Sea area (Section 1.1.1.1 above), with increases in BT2 effort by Belgian, Irish and also English fisheries in 2012.

Table 5.6.1.2.1 Trend in effort (kW\*days at sea), according to cod plan gear definition and Member State, 2000-2012. Note, data are for Celtic Sea subdivisions 7fg (Cel2).

Figure 5.6.1.2.1 shows the contribution by different countries to overall effort in the smaller area, ICES sub-divisions VIIIfg. Vessels from Belgium, France, Ireland and UK (E-W) operate in the Divisions VIIIfg. In terms of kW\*days, Ireland contributes to 42%, France 22%, Belgium 21%, England and Wales 13% (2012).

Figure 5.6.1.2.1. Contribution of each country (Countries fishing less than 1% of the total catches were excluded from the figure) to the total effort in the Divisions VIIIfg (2012).

Figure 5.6.1.2.2 shows the proportion contribution of different gears to the total overall effort in 2012. The fisheries in this area are dominated by the TR1 (38%), BT2 (29%) and TR2 (17%) fisheries. The majority of effort (89%) is undertaken by gears defined as “regulated” by the cod management plan.

Figure 5.6.1.2.2. Contribution of each gear category to the total effort (kW\*days) in the ICES Divisions VIIIfg. Mean over 2003-2012.

Figure 5.5.1.2.3 shows trends in effort by gears grouped into the classification of regulated (left) and unregulated (right) under the cod management plan. The total effort in area VIIIfg has decreased since 2003. This decrease is mostly due to reductions in effort by beam trawl gears (BT), with otter trawl and seine gears relatively stable over the 2003-2012 period. In 2010, most gear categories increased their effort, with a decline in 2011 before effort increasing again in 2012 to levels higher than seen in the last 4 years. Effort in unregulated gears has been increasing steadily since 2006.

Figure 5.6.1.2.4 (left) shows effort by otter trawl and seine gear by mesh size. Since 2007 there has been a shift in effort from the smaller mesh size in the demersal fishery (70-99 mm; TR2) to the larger mesh size in the demersal fishery ( $\geq 100$  mm; TR1), with effort being relatively stable overall by the TR gear. Figure 5.6.1.2.4 (right) shows effort by the beam trawl gear by mesh size. There has been a large decline in effort in the smaller mesh beam trawl gear (80-120 mm; BT2, the only beam trawl mesh category used in the area) since 2003, but in 2012 there was a significant increase in effort on 2011 (39%). There has been a decline in gillnet and longline effort in the area since 2003, but an increase in trammel net effort (Figure 5.6.1.2.5).

Fig. 5.6.1.2.3. Trend in nominal effort by gear types in the Celtic Sea (ICES Divisions VIIIfg), 2003-2012.

Fig. 5.6.1.2.4. Trend in nominal effort for demersal trawl (TR1, TR2 and TR3; left) and beam trawl by mesh size range (BT1, BT2; right) in the Celtic Sea (ICES Divisions VIIIfg), 2003-2012.

Fig. 5.6.1.2.5. Trend in nominal effort for static gears (Regulated Gear GT, GN1, LL1) in the Celtic Sea (ICES Divisions VIIIfg), 2003-2012.

## 5.6.2 *ToR 1.b Catches (landings and discards) of cod in weight and numbers at age by area, Member State and fisheries*

### 5.6.2.1 ICES sub-divisions 7bcefgghjk (Cell)

Information on age distribution in catch by fisheries was not dealt with at the meeting and will be looked at in the second meeting in October.

STECF EWG 13-06 notes that discard information is scarce and presents only landing values; though figures have been provided on catch where some discard information is available (Figures 5.6.3.1.1 – 2), this should be interpreted with care due to some key fisheries not having discard information. Table 5.6.2.1.2 presents discard rates alongside a discard coverage index for what information is available for gears catching cod in the wider Celtic Sea. Where no information is available, the gear has been excluded from the table. As can be seen, in most cases the discard coverage index is either C (<33% of landings having discard information) or B ( $\geq 33\% < 66\%$ ); only the relatively low cod catching gears BT2 and TR3 have  $> 66\%$  of landings with discard samples (category A). It should be noted that the discard coverage index is only an indication of where a minimum one sample has been provided; therefore it should not necessarily be interpreted an indication of discard information quality, just that some information was available for fisheries using the gear.

Figures 5.6.3.1.1-2 show that landings and estimated discards of cod (where available) for the main gear in the Celtic Sea catching cod (TR1) have increased significantly since 2010, with 2012 landings double the landings in 2011. This reflects the particularly strong 2010 year class (the largest since 1987) entering the fishery (ICES, 2013).

Table 5.6.2.1.1 lists the cod landings by Member States and gears, 2003-2012. Cod landings by most countries and gears have increased in 2011 and 2012, reflecting the strong year class and increased quota available.

Table 5.6.2.1.1 Cod landings by Member States and gears, 2003-2012.

Table 5.6.2.1.2. Discard rate and associated coverage index for Cod in Cell1 (7bcefgjhk) by Gear and Special condition as defined under the cod management plan. A,  $\geq 66\%$  of landings have associated discard sampling, B,  $\geq 33\% < 66\%$  of landings have associated discard sampling, C  $< 33\%$  of landings have associated discard sampling. 2003-2012. Gear/Special condition combinations without discard data omitted.

### 5.6.2.2 ICES sub-divisions 7fg (Cel2)

Information on age distribution in catch by fisheries was not dealt with at the meeting and will be looked at in the second meeting in October.

STECF EWG 13-06 notes that discard information is scarce and presents only landing values; though figures have been provided on catch where some discard information is available (Figures 5.6.3.2.1 –2), this should be interpreted with care due to some key fisheries not having discard information.

Table 5.6.2.2.2 presents discard rates alongside a discard coverage index for what information is available for gears catching cod in the Celtic Sea sub-divisions VIIIfg (Cel2). Where no information is available, the gear has been excluded from the table. Discard coverage for landings from the sub-divisions 7fg is better than for the wider Celtic Sea, with the discard coverage index A ( $> 66\%$  of landings with discard samples) for the main cod catching gears (TR1, TR2, GN1) for the last, excepting for TR1 in 2012 where discards are considered to have increased significantly but with the cautionary note that discard sampling is only available for a small proportion of the landings (category C,  $< 33\%$  of landings having discard information). It should be noted that the discard coverage index is only an indication of where a minimum one sample has been provided; therefore it should not necessarily be interpreted an indication of discard information quality, just that some information was available for fisheries using the gear.

Figure 5.6.3.2.1-2 show landings and estimated discards of cod (where available) for the main gear in the Celtic Sea subareas VIIIfg catching cod. Landings by the main TR1 gear increased in 2012. This reflects the particularly strong 2010 year class (the largest since 1987) entering the fishery (ICES, 2013).

Table 5.6.2.2.1 lists the cod landings by Member States and gears from 7fg, 2003-2012. It can be seen that landings by most countries and gears has increase in 2012. The largest fishery (French TR1) has doubled its landings of cod in 2012 compared to 2011.

Figure 5.6.2.2.1 provides information on cod landings from the sub-area 7fg (Cel2) as a proportion of the total landings from the wider 7bcefgjhk (Cel2). Landings of cod have generally been  $>60\%$  over 2003-2012, with the one exception of 2011 when they dropped to 47%, before increasing again in 2012.

Table 5.6.2.2.1 Cod landings (t) by Member States and gears, 2003-2012.

Figure 5.6.2.2.1 Cod: Contribution of the landings from ICES Divisions VIIfg to the total landings from the Celtic Sea (ICES Divisions VIIbc,e-k) over 2003-2012

5.6.3 *ToR 1.c Catches (landings and discards) of non-cod species in weight and numbers at age by area, Member State and fisheries*

### 5.6.3.1 ICES sub-divisions 7bcefghjk (Cell)

Information on age distribution in catch by fisheries was not dealt with at the meeting and will be looked at in the second meeting in October.

STECF EWG 13-06 notes that discard information is scarce and presents only landing values; though figures have been provided on catch where some discard information is available (Figures 5.6.3.1.1 – 2), this should be interpreted with care due to some key fisheries not having discard information.

Table 5.6.3.1.8 presents discard rates alongside a discard coverage index for what information is available for gears catching anglerfish, haddock, hake, *Nephrops*, plaice, sole and whiting in the wider Celtic Sea. As can be seen, in most cases the discard coverage index is either C (<33% of landings having discard information) or B ( $\geq 33\% < 66\%$ ), reflecting the poor discard coverage in the data. It should be noted that the discard coverage index is only an indication of where a minimum one sample has been provided; therefore it should not necessarily be interpreted an indication of discard information quality, just that some information was available for fisheries using the gear.

Figure 5.6.3.1.1-2 shows landings and discards estimates (where available) of anglerfish, haddock, hake, *Nephrops*, plaice, sole, and whiting by the main gears from the wider Celtic Sea 7bcefghjk (Cell), 2003-2012. Landings of anglerfish have increased significantly in 2011 and 2012, while landings of haddock and whiting have also increased by the main gear (TR1).

Table 5.6.3.1.1-7 lists the anglerfish, haddock, hake, *Nephrops*, plaice, sole, and whiting landings by Member States and gears, 2003-2012. Landings of anglerfish and haddock by the main French fishery (TR1) have increased significantly in 2012; while Irish TR1 whiting landings have also been increasing (landings in 2012 greater than double the landings in 2009). Large increases in Hake landings by longlines (LL1) in 2012 are due to the inclusion of Spanish data for this year only.

Table 5.6.3.1.9 shows the discard rate and discard coverage index for pelagic species which contribute to >1% of the landings of the main pelagic gears (PEL\_TRAWL and PEL\_SEINE). This includes, albacore tuna, boarfish, herring, horse mackerel, mackerel, sardine, sprat, and blue whiting. Discard information for *Nephrops* has also been presented. Where no discard information was available for a gear/species it was omitted from the table. As can be seen, discard information from the fisheries is scarce and where available considered to be of low coverage of the landings (in most cases classified as C, <33% of landings covered by discard information). It should be noted that the discard coverage index is only an indication of where a minimum one sample has been provided; therefore it should not necessarily be interpreted an indication of discard information quality, just that some information was available for fisheries using the gear.

Figures 5.6.3.2.1 – 3 show the landings composition of the main gears (TR1, TR2, BT2, GN1, PEL\_TRAWL) 2003-2012 from the wider Celtic Sea (Cell; 7bcefghjk). The main species caught in this area per gear category was defined as species representing more than 2% of the total landings on average, 2003-2012.

For TR1 gear, landings composition has remained relatively stable over the time series, with landings predominately being made up from anglerfish, cod, haddock, hake, megrim, *Nephrops*, whiting and witch flounder. There have been increasing haddock, cod and megrim landings in recent years.

For TR2 gear, landings composition is more mixed, being predominately made up of Anglerfish, cuttlefish, gurnard, haddock, megrim, *Nephrops*, queen scallops and whiting. Since 2009 there have been no reported landings of cuttlefish from the fishery, with a larger proportion of the landings being made up of *Nephrops*, megrim and haddock.

For BT2 gear, landings composition has been stable over the time series, consisting predominately of anglerfish, megrim, plaice and sole. For GN1 Hake has become a more prominent (and the predominant) component of landings since 2009 with Pollack, anglerfish and spider crab also being important.

The Pelagic trawl fishery mainly consisted of landings of horse mackerel, mackerel and blue whiting up until 2009, when landings of boarfish have also become an important component of the fishery.

Table 5.6.3.1.1 Anglerfish landings (t) by Member States and gears, 2003-2012.

Figure 5.6.3.1.1 Landings and discards of the main species by active gears (BT2, TR1, TR2) in the wider Celtic Sea (Cell1; 7bcefghjk). 2003-2012.

Figure 5.6.3.2.2. Landings and discards of the main species by passive gears (GN1, GT1, LL1) in the wider Celtic Sea (Cell1; 7bcefghjk). 2003-2012.

Table 5.6.3.1.8. Discard rate and associated coverage index for Anglerfish, Haddock, Hake, *Nephrops*, Plaice, Sole and whiting in Cell1 (7bcefghjk) by Gear and Special condition as defined under the cod management plan. A, ≥ 66% of landings have associated discard sampling, B, ≥ 33% < 66% of landings have associated discard sampling, C < 33% of landings have associated discard sampling. 2003-2012. Gear/Special condition combinations without discard data omitted.

Table 5.6.3.1.9. Discard rate and associated coverage index for Pelagic Species making up more than 1% of total pelagic landings by pelagic gears (trawl and seine), and *Nephrops* in Cell1 (7bcefghjk) by Gear and Special condition as defined under the cod management plan. A,  $\geq 66\%$  of landings have associated discard sampling, B,  $\geq 33\% < 66\%$  of landings have associated discard sampling, C  $< 33\%$  of landings have associated discard sampling. 2003-2012. Gear/Special condition combinations without discard data omitted.

Figure 5.6.3.2.1. Relative percentage (in volume, not taking into account the discards) of each species in the total catches for TR1 (left), and TR2 (right) in Cell 1 (7bcefghjk). 2003-2012. Note that landings are only those reported in accordance with the data call, not total landings by the fisheries.

Figure 5.6.3.2.2. Relative percentage (in volume, not taking into account the discards) of each species in the total catches for BT2 (left), and GN1 (right) in Cell 1 (7bcefghjk). 2003-2012. Note that landings are only those reported in accordance with the data call, not total landings by the fisheries.

Figure 5.6.3.2.3. Relative percentage (in volume, not taking into account the discards) of each species in the total catches for PEL\_TRAWL in Cell 1 (7bcefgjkh). 2003-2012. Note that landings are only those reported in accordance with the data call, not total landings by the fisheries.

### 5.6.3.2 ICES sub-divisions 7fg (Cel2)

Information on age distribution in catch by fisheries was not dealt with at the meeting and will be looked at in the second meeting in October.

STECF EWG 13-06 notes that discard information is scarce and presents only landing values; though figures have been provided on catch where some discard information is available (Figures 5.6.3.2.1 – 2), this should be interpreted with care due to some key fisheries not having discard information.

Table 5.6.3.2.8 presents discard rates alongside a discard coverage index for what information is available for gears catching anglerfish, haddock, hake, *Nephrops*, plaice, sole and whiting in the sub-area 7fg of the Celtic Sea. As can be seen, in most cases the discard coverage index is either C (<33% of landings having discard information) or B ( $\geq 33\% < 66\%$ ), reflecting the poor discard coverage in the data. The exceptions being for haddock and whiting in TR2 fisheries, where the coverage index is A, indicating that  $\geq 66\%$  of landings have discard samples. It should be noted that the discard coverage index is only an indication of where a minimum one sample has been provided; therefore it should not necessarily be interpreted an indication of discard information quality, just that some information was available for fisheries using the gear.

Figure 5.6.3.2.1-2 shows landings and discards estimates (where available) of anglerfish, haddock, hake, *Nephrops*, plaice, sole, and whiting by the main gears from the sub-area of the Celtic Sea 7fg (Cel2), 2003-2012. The main gear for landings of these species is TR1, with landings of haddock, whiting, cod and anglerfish increasing in recent years. Landings of anglerfish in the BT2 fishery have also been increasing since 2008. GN1 landings of Hake, cod and pollack also increased in 2012.

Table 5.6.3.2.1-7 lists the anglerfish, haddock, hake, *Nephrops*, plaice, sole, and whiting landings by Member States and gears, 2003-2012. Landings of anglerfish by Belgian and English BT2 and French

TR1 fisheries have increased in recent years. French and Irish haddock landings in the TR1 fishery, as well as Irish TR1 whiting landings have increased. As have landings of sole from the Belgian BT2 vessels.

Table 5.6.3.2.9 shows the discard rate and discard coverage index for pelagic species which contribute to >1% of the landings of the main pelagic gears (PEL\_TRAWL and PEL\_SEINE). This includes herring, sprat and boarfish only. Discard information for *Nephrops* has also been presented. Where no discard information was available for a gear/species it was omitted from the table. As can be seen, discard information from the fisheries is very scarce, and where available considered to be of low coverage of the landings (in most cases classified as C, <33% of landings covered by discard information). The only exception is TR1 and TR2 catches of herring, where its indicated that there is good coverage (A; ≥66% of landings) with no discards observed in the past four years. It should be noted that the discard coverage index is only an indication of where a minimum one sample has been provided; therefore it should not necessarily be interpreted an indication of discard information quality, just that some information was available for fisheries using the gear.

Figures 5.6.3.2.1-3 show the landings composition of the main gears (TR1, TR2, BT2, GN1, PEL\_TRAWL) 2003-2012 from the sub-area of the Celtic Sea (Cel2; 7fg). The main species caught in this area per gear category was defined as species representing more than 2% of the total landings on average, 2003-2012.

For TR1 gear in sub-division 7fg, landings predominately consist of whiting, haddock, *Nephrops*, cod and anglerfish. Trends are quite stable and mainly driven by Whiting and Haddock.

For TR2 gear, landings are predominately *Nephrops*, whiting, haddock, cod and anglerfish. Trends are quite stable and mainly driven by whiting and *Nephrops*.

For BT2 gear, landings composition has consists of mainly anglerfish, megrim, sole, rays, lemon sole, cod and haddock. Trends have been stable over the time series driven by anglerfish, megrim and sole.

For GN1, the main species caught in sub-division 7fg are pollock, hake, ling, cod, saithe, anglerfish, haddock, and, up until the landings ban introduced in 2010, dogfish. Trends are quite stable and mainly driven by hake, pollack and saithe.

For Pelagic trawls, landings are dominated by herring with some landings of sprat and boarfish since 2009.

Table 5.6.3.2.1 Anglerfish (t) landings by Member States and gears, 2003-2012.

Figure 5.6.3.2.1. Landings and discards of the main species by active gears (BT2, TR1, TR2) in the sub-section of the Celtic Sea (Cel2 7fg). 2003-2012.

Figure 5.6.3.2.2. Landings and discards of the main species by passive gears (GN1, GT1, LL1) in the wider Celtic Sea (Cell1; 7bcefghjk). 2003-2012.

Table 5.6.3.2.8. Discard rate and associated coverage index for Cod in Cel2 (7fg) by Gear and Special condition as defined under the cod management plan. A, ≥ 66% of landings have associated discard sampling, B, ≥ 33% < 66% of landings have associated discard sampling, C < 33% of landings have associated discard sampling. 2003-2012. Gear/Special condition combinations without discard data omitted.

Figure 5.6.3.2.1. Relative percentage (in volume, not taking into account the discards) of each species in the total catches for TR1 (left), and TR2 (right). 2003-2012. Note that landings are only those reported in accordance with the data call, not total landings by the fisheries.

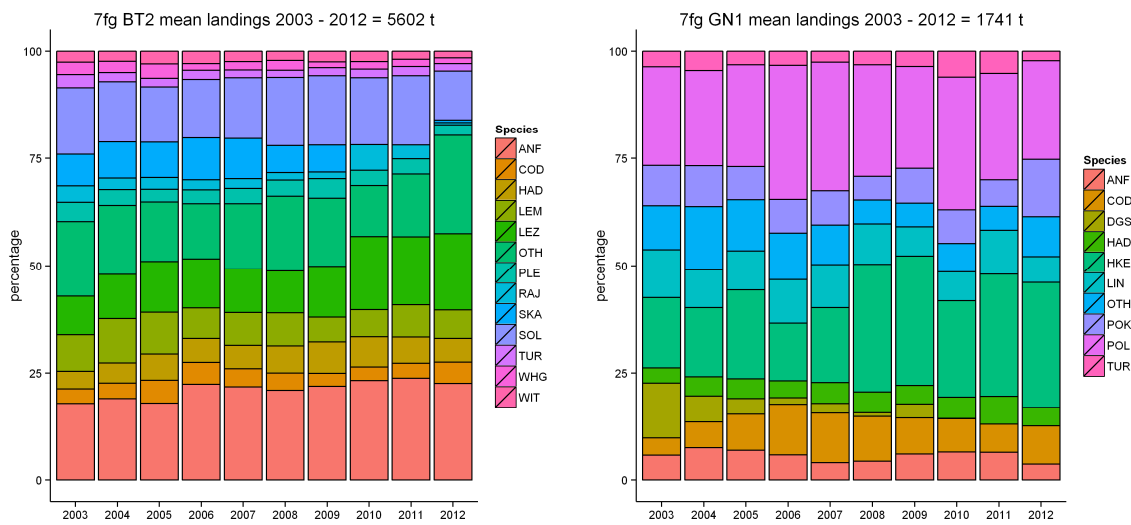

Figure 5.6.3.2.2 Relative percentage (in volume, not taking into account the discards) of each species in the total catches for BT2 (left) and GN1 (right). 2003-2012. Note that landings are only those reported in accordance with the data call, not total landings by the fisheries.

Figure 5.6.3.2.3 relative percentage (in volume, not taking into account the discards) of each species in the total catches for Pelagic Trawl, 2003-2012. Note that landings are only those reported in accordance with the data call, not total landings by the fisheries.

#### 5.6.4 ToR 1.d CPUE and LPUE of cod by area, fisheries and Member States

Tables 5.6.4.1.1 and 5.6.4.1.2 showing LPUE and CPUE by gear groups (regulated and unregulated); area and nation are not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

##### 5.6.4.1 ICES sub-divisions 7bcefghjk (Cell)

STECF EWG 13-06 notes that discard information is scarce. Figure 5.6.4.1.1 displays the trends in cod CPUE and LPUE, 2003-2012 for the four gears with highest CPUE or LPUE over the past 5 years. The increasing LPUE and CPUE trends in recent years are consistent with the ICES 2013 stock assessment which shows a large increase in stock size following a strong 2010 year class.

Tables 5.6.4.1.1 – 2 shows CPUE and LPUE figures by all gear types. Information by nation is not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>.

Figure 5.6.4.1.1 CPUE and LPUE for cod and for Celtic Sea and for gear category and years 2003-2012.

Table 5.6.4.1.1 Cod CPUE (g/(kW\*days)) by gear/mesh-size category and year, 2003-2012. Celtic Sea

### 5.6.4.2 ICES sub-divisions 7fg (Cel2)

STECF EWG 13-06 notes that discard information is scarce. Figure 5.6.4.2.1 displays the trends in cod CPUE and LPUE, 2003-2012 for the four gears with highest CPUE or LPUE over the past 5 years. The increasing LPUE and CPUE trends in recent years are consistent with the ICES 2013 stock assessment which shows a large increase in stock size following a strong 2010 year class.

Tables 5.6.4.2.1 and 5.6.4.2.2 show LPUE and CPUE by gear types . Information by nation is not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

Figure 5.6.4.2.1 CPUE and LPUE for cod and for Divisions VIIIfg and for gear category and years 2003-2012.

### 5.6.5 ToR 2 Main species by gear group and remarks on quality of catches and discard estimates

Discard data are only available for some species and gears, so the lack of discard information for a given species/gear in the graphs may mean no information rather than zero discards. Furthermore, due to the limited availability and reliability of discard information for some species and from some countries contributing landings information to the dataset, care is required in the use of these data to draw firm conclusions about catch composition.

Discard rates alongside a discard coverage index has been presented in the relevant sections above, where information is available. In most cases the discard coverage index is either C (<33% of landings having discard information) or B ( $\geq 33\% < 66\%$ ), reflecting the poor discard coverage in the data. It should be noted that the discard coverage index is only an indication of where a minimum one sample has been provided; therefore it should not necessarily be interpreted an indication of discard information quality, just that some information was available for fisheries using the gear.

#### 5.6.5.1 ICES sub-divisions 7bcefghjk (Cel1)

Table 5.6.5.1.1 lists the relative landings contributions by major demersal species by the major gears, ranked in ascending order in 2012, 2003-2012. TR1 gear is the main gear landing anglerfish and cod; TR2 is the main gear catching *Nephrops*; BT2 is the main gear landing plaice and sole, while GN1 is the main gear landings hake.

Table 5.6.5.1.1 Relative landings contributions by major demersal species as caught by the major gears, ranked in ascending order in 2012, 2003-2012.

### 5.6.5.2 ICES sub-divisions 7fg (Cel2)

Table 5.6.5.2.1 lists the relative landings contributions by major demersal species by the major gears, ranked in ascending order in 2012, 2003-2012. TR1 is the main gear landing anglerfish, cod and hake; TR2 is the main gear landing *Nephrops*, while BT2 is the main gear landing plaice and sole.

Table 5.6.5.2.1 Relative landings contributions by major demersal species as caught by the major gears, ranked in ascending order in 2012, 2003-2012.

### 5.6.6 ToR 3 Information on small boats (<10m by area)

Information for French and UK under 10m fisheries was available; Irish information was not available. Information for other countries is given by gear type, however this information is known to be incomplete.

#### 5.6.6.1 Fishing effort of small boats by area, Member State and fisheries

Table 5.6.6.1.1 Nominal effort (kWdays at sea) by Member State for both areas, the entire Celtic Sea (Cel 1) and the sub-divisions 7fg only (Cel2). Effort by the main countries where data is presented (UK and France) has been relatively stable in the past two years; French effort appears to have increased significantly since 2009 though this is due to incomplete data prior to this period rather than an observed increase in effort by the fisheries.

#### 5.6.6.2 Catches (landings and discards) of small boats by area, Member State and fisheries

Table 5.6.6.2.1 lists the cod landings by Member State for both areas, the entire Celtic Sea (Cel 1) and the sub-divisions 7fg only (Cel2). Landings of cod reflect trends by the larger vessels, with landings increasing in recent years following the strong 2010 year class and the increase in stock size (ICES, 2013).

Table 5.6.6.2.Cod landings (t) by Member State for both areas, the entire Celtic Sea (Cel 1) and the sub-divisions 7fg only (Cel2).

#### 5.6.7 ToR 4 Data quality and any unexpected evolutions of the trends in catches and effort by area, Member State and fisheries

The inclusion of Spanish data in 2012 is welcome and provides a more complete picture of landings as reported by Member States. A lack of discard information, including for some major fisheries, mean that interpreting trends in catch and CPUE is challenging; submission of discard information by all countries would enable of more complete evaluation of the Celtic Sea fisheries.

#### 5.6.8 ToR 5 Correlation between partial cod mortality and fisheries

The STECF EWG 13-06 notes that the Celtic Sea cod stock (7e-k) is not part of the cod management plan. For reasons of consistency, the STECF EWG presents partial exploitation rates by fisheries and Member States as defined in the cod plan in relation to the estimated total exploitation rate by ICES (2013) and the landings and discards volumes in relation to the estimated total catch for the year available. The full list of all fisheries can be downloaded from the EWG's web page <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>.

Correlations between fishing effort in units of kW days at sea of the major fisheries (top 10, where contributing to >1% of total catch) and partial fishing mortalities are presented in Figures 5.6.8.1 for Cel1 and 5.6.8.4 for Cel2. Trends in partial fishing mortality by these fisheries over time are presented in Figures 5.6.8.2 (Cel1) and 5.6.8.5 (Cel2), and catchability coefficients for these figures are also presented over time in Figures 5.6.8.3 and 5.6.8.6. The following six Tables 5.6.8.1-6 present trends in effort and partial F for catch, landings and discards, respectively. The presented parameters r (absolute value of Pearson's coefficient of correlation), numbers of points considered as well as a p value to quantify the statistical significance ( $\leq 0.05$ ) allow conclusions about the quality of the correlation between the partial F and fisheries specific fishing effort.

SSB has increased from below Blim to well above MSY Btrigger since 2010. Recruitment has been highly variable over time with occasional very high recruitment (1987, 2010). Fishing mortality increased from around 0.5 in 1971 to 0.8 in 1981 and varied without trend around this level until 2005, when it sharply declined to around  $F_{MSY}$  in 2011 and 2012. French and Irish trawlers represent more than 80 percent of the estimated harvest rates.

STECF EWG 13-06 notes that the correlation between fishing effort and partial fishing mortality of catches and landings of the summed catches and partial Fs for the major fisheries and that for the main country/gear catching cod (French TR1) in the wider Celtic Sea (Cel1; 7bcefgghjk) is not significant. However, there is a significant relationship for other major fisheries including for catch and landings for French, Irish, English, Northern Irish and Dutch (catch only) TR2 fisheries and Belgian BT2 (all  $p < 0.05$ ).

When considering the sub-area Cel2 (7fg), the relationship between F and effort is also significant for the major French TR1 fishery for landings ( $p = 0.011$ ), but not for catch. The relationship between catch partial F and effort remains significant for the main TR2 fisheries (France, Ireland, except England) and the Belgian BT2 fishery in the sub-area 7fg.

The increase in partial F for 2012 for the main French TR1 fishery in 2012 (Figures 5.8.6.2 & 5.8.6.5) and increase in catchability (Figure 5.6.8.1 & 5.6.8.6) may indicate a switch to targeting cod following increased fishing opportunities and increased stock size.

The good correlation between fishing effort and partial fishing mortality for some fisheries indicates that effective fishing management by fishing effort units in KW days at sea may be possible, in these cases, as an auxiliary measure to landings constraints and technical measures. The relationship between F and effort appears less direct where the fishery has the ability to adapt targeting behaviour to changes in fishing opportunities (e.g. the French TR1 fishery).

Table 5.6.8.1 Cod in the entire Celtic Sea (7bcefghjk). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for catches of fisheries using gears defined as those regulated under the cod management plan. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.6.8.2 Cod in the entire Celtic Sea (7bcefghjk). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for landings of fisheries using gears defined as those regulated under the cod management plan. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.6.8.4 Cod in the Celtic Sea (7fg). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for catches of fisheries using gears defined as those regulated under the cod management plan. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.6.8.5 Cod in the Celtic Sea (7fg). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for landings of fisheries using gears defined as those regulated under the cod management plan. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Table 5.6.8.6 Cod in the Celtic Sea (7fg). The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 cod assessment, as well as partial Fs for discards of fisheries using gears defined as those regulated under the cod management plan. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

Circles represent data points, the line a smoother fitting through the data points to identify trends, the grey represents confidence bounds round the smoother ( $\pm 2SE$ , 95%).

## 5.7 Southern hake and *Nephrops* effort regime evaluation in the context of Annex IIB to Council Regulation (EU) No 43/2012)

STECF-EWG 13-06 considers that Annex IIB of CR 43/2012 represents a fleet specific effort management regime which supports the southern hake and *Nephrops* recovery plan (CR 2166/2005).

Annex IIB excludes the Gulf of Cádiz although this area is included in the recovery plan (CR 2166/2005) and is part of the area of Southern stock of hake (8c and 9a) and Iberian *Nephrops* populations. The cause of this exclusion is that when the recovery plan was established in 2005 the Spanish administration had already established a fishing plan for the trawl fleet of the Gulf of Cádiz that was followed by consecutive similar plans since then. The last Fishing Plan (ARM/58/2010) was applied since September 2010 to September 2012 and established a 45 days close season in autumn.

CR 43/2012 defines “Gulf of Cádiz” as the area east of longitude 7° 23’ W, therefore “excluding Gulf of Cádiz” means in practice to exclude from area 9a the rectangles 01E3, 02E3, 03E3 and 01E4 and partially the rectangles 01E2 and 02E2.

STECF-EWG 13-06 notes that the classification of the trawl mesh size  $\geq 32$  mm in point 1 of Annex IIB mixes two clearly defined Portuguese fleets and fisheries. One fishery targets demersal fish species with mesh size 65-69mm and greater (OTB\_DEF\_ $\geq$ 55\_0\_0), and the other targets crustaceans with mesh size 55-59mm and greater (OTB\_CRU\_ $\geq$ 55\_0\_0), operating in different fishing grounds and depth ranges. The demersal trawl fleet targets a large variety of species, namely horse mackerel (*Trachurus trachurus*), blue whiting (*Micromesistius poutassou*), blue jack mackerel (*Trachurus picturatus*), pouting (*Trisopterus luscus*) and hake (*Merluccius merluccius*). The crustacean trawl fleet operates along the SW and S coasts of Portugal and the main target species are deepwater rose shrimp (*Parapenaeus longirostris*), Norway lobster (*Nephrops norvegicus*), other shrimp species and blue whiting. The bottom otter trawl fleet is not allowed to fish inside the 6-mile coastal area, and a closed season is established for the Portuguese crustacean trawl in January each year

The static gears (gillnets, trammel nets, longline and pots) are mainly used by the so-called Portuguese polyvalent fleet, which are licensed for more than one type of gear. Only gillnets and longlines are regulated within the Annex IIB.

Table 5.7.1 Portuguese Annex IIB regulated gears and trammel nets.

| Effort control regime<br>(Annex IIB)                                       | DCF métier<br>(Acronym) | Description  |
|--|-------------------------|--|
| Bottom trawls, Danish seines<br>and similar trawls of mesh size<br>≥ 32 mm | OTB_DEF_>=55_0_0        | Otter bottom trawl targeting demersal fish using<br>mesh size ≥ 65 mm      |
|  | OTB_CRU_>=55_0_0        | Otter bottom trawl targeting crustacean species<br>using mesh size ≥ 55 mm |
| Gill-nets of mesh size ≥ 60<br>mm  | GNS_DEF_60-79_0_0       | Set gillnet targeting demersal fish using mesh<br>size of 60-79 mm         |
|  | GNS_DEF_80-99_0_0       | Set gillnet targeting demersal fish using mesh<br>size of 80-99 mm         |
|  | GNS_DEF_>=100_0_0       | Set gillnet targeting demersal fish using mesh<br>size ≥ 100 mm            |
| Bottom longlines   | LLS_DEF_0_0_0           | Set longline targeting demersal fish                                       |
| Trammel nets (non-regulated)   | GTR_DEF_80-99_0_0       | Set trammel net targeting demersal fish using<br>mesh size of 80-99 mm     |
|  | GTR_DEF_>=100_0_0       | Set trammel net targeting demersal fish using<br>mesh size ≥ 100 mm        |

STECF-EWG 13-06 notes that under gears regulated by the Annex IIB there is also a mixture of different Spanish DCF métiers (Table 5.7.2).

The Spanish bottom trawl operating in the Northern and Western coastal waters (ICES Divisions VIIIc and IXa) is prosecuted by vessels with 28 m of average length. The minimum trawl depth is 100 m, the maximum activity period is 18 hours per day and they must stop fishing for a 48-hour continuous period per week. This fleet is composed of otter trawlers and pair trawlers.

The most important Spanish métiers in 8c and 9a are described below:

“Baca” gear (OTB\_DEF\_>=55\_0\_0), characterized by a vertical opening of 1.2-1.5 m and a wingspread of 22-25 m, is allowed to use a cod end mesh size of 70 mm to catch demersal species, standing out hake (*Merluccius merluccius*), megrim (*Lepidorhombus boscii* and *L. whiffiagonis*) and anglerfish (*Lophius piscatorius* and *L. budegassa*).

“Jurelera” (OTB\_MPD\_>=55\_0\_0) permits a higher vertical opening (5-5.5 m) and is allowed to use a smaller mesh size (55 mm), so it is used to target pelagic fish as horse mackerel (*Trachurus trachurus*) and mackerel (*Scomber scombrus*). As ‘baca’ and ‘jurelera’ gears can be used in the same trip, the identification of the trip métier must be done by multivariate analysis (Punzón et al., 2010) of the landings profile.

The pair bottom trawl fleet (PTB\_MPD\_>=55\_0\_0) uses a gear that can reach a vertical opening of 25 m and a wingspread of 65 m. This fleet is allowed to use a minimum mesh size of 55 mm when it is directed

to blue whiting (*Micromesistius poutassou*), the main species in landings, but needs to be extended to 70 mm when the hake proportion exceeds 15% in landings (Castro et al., 2010). However, both cod ends are included into the same DCF mesh range due to the difficulty of split both kind of trips for sampling purposes.

Table 5.7.2 Spanish Annex IIB regulated gears and trammel nets.

| Effort control regime (Annex IIB)                                | Area          | DCF Metier acronym      | Description  |
|--|---------------|-------------------------|--|
| Trawls, Danish seines or similar gears of mesh size $\geq$ 32 mm | 8c & 9a       | OTB_DEF_ $\geq$ 55_0_0  | (‘Baca’) Otter bottom trawl targeting demersal species (hake, megrim, anglerfish ...) using a cod end mesh size of 70 mm |
|  | 8c & 9a North | OTB_MPD_ $\geq$ 55_0_0  | (‘Jurelera’) Otter trawl targeting pelagic and demersal species (horse mackerel, mackerel)                               |
|  |               | PTB_MPD_ $\geq$ 55_0_0  | Pair bottom trawl targeting pelagic and demersal species (blue whiting, hake, mackerel) using a                          |
|  |               | SDN_MCF_ $\geq$ 55_0_0  | Danish seine targeting cuttlefish  |
|  | 9a South      | OTB_MCD_ $\geq$ 55_0_0  | Otter bottom trawl targeting crustaceans and demersal species (rose shrimp, hake, cuttlefish)                            |
| Gill-nets of mesh size $\geq$ 60 mm                              | 8c & 9a North | GNS_DEF_60-79_0_0       | (‘Beta’) Set gillnet targeting demersal species (horse mackerel, pouting, hake, ...) using a mesh size of 60 mm          |
|  |               | GNS_DEF_80-99_0_0       | (‘Volanta’) Set gillnet targeting hake using a mesh size of 90 mm  |
|  |               | GNS_DEF_ $\geq$ 100_0_0 | (‘Rasco’) Set gillnet targeting anglerfish using mesh size of 280 mm   |
| Bottom longlines   | 8c & 9a       | LLS_DEF_0_0_0           | Bottom longline targeting demersal species (conger, pomfret, hake, ...)  |
|  | 9a S          | LLS_DWS_0_0_0           | Bottom longline targeting silver scabbardfish  |
| Trammel nets (non regulated)                                     | 8c & 9a N     | GTR_DEF_60-79_0_0       | Set trammel net targeting demersal species (cuttlefish, spider crab, rays, ...) using mesh size over 60 mm               |
|  | 9a S          | GTR_DEF_40-59_0_0       | Set trammel nets targeting demersal species (cuttlefish, wedge sole, meagre, prawns, ...) using 40-60 mm mesh size       |

Otter bottom trawl in 9a South (OTB\_MCD\_ $\geq$ 55\_0\_0) fishes in both Portuguese and Spanish waters and is directed to crustaceans and demersal species as rose shrimp (*Parapeanaeus longirostris*), hake and cuttlefish (*Sepia officinalis*).

The Northern Spanish gillnet fleet uses three types of nets: “beta”, “volanta” and “rasco” nets (Castro et al., 2011).

- “Beta” gear (GNS\_DEF\_60-79\_0\_0) uses mesh sizes of 60 mm to target a variety of demersal species as horse mackerel, pouting (*Trisopterus luscus*), hake and mullets (*Mullus spp.*).
- “Volanta” gear (GNS\_DEF\_80-99\_0\_0) is a gillnet composed by nets with 10 m high and 50 m length, which is regulated under a mesh size of 90 mm to specifically catch hake.
- “Rasco” gillnet is composed by nets with 3.5 m high and 50 m length, and uses a 280 mm mesh size to target anglerfish (GNS\_DEF\_>=100\_0\_0).

The main Spanish set longline fleet (LLS\_DEF\_0\_0\_0) uses a line with less than 4000 hooks and is used to catch demersal fish as conger (*C. conger*), pomfret and hake, among others.

The Northern Spanish trammel net fleet (GTR\_DEF\_60-79\_0\_0) uses a gear made with three walls of netting, the two outer walls being of a larger mesh size (400-500 mm) than the loosely hung inner netting panel (60-90 mm), and targets a variety of demersal species as cuttlefish, spider crabs or rays.

Annex IIB of CR 43/2012 sets the maximum number of days the fishing vessels are allowed to be present in the area carrying the specified regulated gears (Table 5.7.3). The regulated gear types are named as “3a” (bottom trawler mesh size  $\geq 32$  mm), “3b” (gillnet  $\geq 60$  mm) and “3c” (bottom longline), using the 2006-2007 regulations numbering. Special conditions are applied to vessels that landed less than 5 tons of hake and less than 2.5 tons of Norway lobster in the year 2009 or 2010 (CR 43/2012). These special conditions, previously referred as IIB72ab according to their numbering (Annex IIB, point 7.2, *a* and *b*) in CR(s) 40/2008 and 43/2009, were updated to IIB52ab in CR(s) 53/2010 and 57/2011 and to IIB61 in CR43/2012.

In 2010, additional days were allocated to Spanish and Portuguese vessels on the basis of permanent cessation of vessels from each country. This different allocation is reflected in the 2011 allowed days at sea.

Table 5.7.3. Historic trends in allowed days at sea by vessel specified in the Council Regulations since 2005.

(\*) according to 2006 and 2007 regulations

(\*\*) SPECON IIB61 corresponds to IIB72ab of the regulations prior to 2010

The days of a trip shall not be counted for effort regulation if hake catch (landing + discard) is less than 4% of the trip catch (CR 43/2012).

STECF-EWG 13-06 considers that the use of fishing days (or kW\*days) to manage effort of static gears such as gillnets and longlines is a very poor approximation of the effective effort and thus may put at risk the management goals.

### 5.7.1 ToR 1.a Fishing effort in kWdays, GTdays and number of vessels by Member state and fisheries

2012 kW\*days, GT\*days and number of vessels in 8c and 9a were provided by Spain, Portugal, France and Scotland by area, gear, special condition and vessel length. EWG effort data time series start in 2000. Ireland, England and the Netherlands provided sporadic information in previous years. Spain did not provide 2010 and 2011 data.

According to Annex IIB of CR 43/2012, in the context of the recovery plan for southern hake and *Nephrops* stocks, fishing vessels with overall length above 10 meters that have trawl nets with mesh sizes >32 mm, gillnets > 60 mm or bottom longlines might be present within the area for a maximum of 150 days during 2012 if they have Spanish flag, 149 days if they have French flag and 155 days if they have Portuguese flag (Table I of the Annex II B, Table 5.7.3).

If, during 2009 or 2010 these vessels landed less than 5 tonnes of hake and less than 2.5 tonnes of *Nephrops*, special conditions were applied and they were not covered by the effort limitation (Table 5.7.3), but were obliged not to exceed those amounts in 2012. The special conditions reference years were 2001-2003 average for 2005–2009 regulations, 2007 or 2008 for 2010 regulation, 2008 or 2009 for 2011 regulation and 2009 or 2010 for 2012 regulation.

Spanish and Portuguese regulated trawls landed at list half of 8c9a hake and anglerfish in 2012 and the 95% of *Nephrops* landings (see Fig. 5.7.2.3).

Trawl effort data provided by Spain (2002-2009, 2012) to the STECF EWG database come from logbooks and show a decreasing trend since 2004. These data can be compared with the effort data presented by Spain for the same area to the 2013 ICES WGHMM. The data provided to the ICES WG were effort estimates derived from several sources of data. These data also presented a decreasing trend, but show a more marked effort drop in the last years (ICES, 2013; Figure 5.7.1.1, left).

Effort estimates provided by Portugal (2000-2012) to the EWG database present a decreasing trend between 2007 and 2010 and stability since then. Portuguese data come mostly from logbooks and, for those that do not have logbooks (< 10 m), from sales records. We can compare these data with the effort data presented by Portugal for the same area to the 2013 ICES WGHMM. The data provided to the ICES WG come from a standardized effort series based on logbook data (ICES, 2013). These data presented also a decreasing trend until 2010, but no data were available for 2011 and 2012 (Figure 5.7.1.1, right).

Figure 5.7.1.1. Comparison of trawl effort presented to ICES WGHMM and to STECF EWG data base (this report) (left: Spain, right: Portugal).

Figure 5.7.1.2 shows the decreasing trend in the 8c and 9a trawl fleets from the 2013 ICES WGHMM that corroborates the decreasing trends found in the EWG trawl effort data.

Fig. 5.7.1.2. 8c and 9a trawl fleets effort from the 2013 ICES WGHMM (1985-2012).

The 2000-2012 effort data in terms of kW\*days by Member State are given in Table 5.7.1.1.

Table 5.7.1.1. Trend in nominal effort (kW\*days at sea) by Member State and existing derogations given in Table 1 of Annex IIB (CR 43/2012), 2000-2012. Derogations are sorted by gear, special condition (SPECON) and country. Data quality is summarised in section 4. Note that the gear type “3t” denotes the non-regulated effort for trammel gear with all mesh sizes. **No Spanish data in 2010 and 2011.**

Information on trends in GTdays is available on the website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

In addition to the 2006 and 2007 regulation defined gear types “3a” (bottom trawler mesh size  $\geq 32$  mm), “3b” (gillnet  $\geq 60$  mm), “3c” (bottom longline) and the undefined (“none”), the tables include trammel nets under the coding “3t”, as they were found to contribute significantly to the static effort deployed (9% of the kWdays and 7% of the landings in 2012).

In May-June 2013 Spain provided only 2012 data, not changing previous data. Portugal provided the whole series, correcting to tons what was submitted in 2012, in kilograms. No differences were found between the resubmitted data in 2012 and the data submitted in 2011.

Figure 5.7.1.3 shows effort trends for Spain and Portugal, the main players in the area (99% of the kWdays in 2012), for the period 2003 – 2012. No Spanish data is available for 2010 and 2011.

Fig. 5.7.1.3. Effort (KW\*days) trends by gear type and Member State (2003-2012). There are not Spanish data from 2010 and 2011. Above: Spain, below: Portugal.

The data submitted by the Member States for the years 2000-2002, initial period of the time series, do not seem realistic as several gears present very low effort data and/or gaps, therefore there were omitted in the Figure 5.7.1.3. Both Spanish and Portuguese information comes from logbooks and for the Portuguese vessel with length under 10 m, from sales notes. Logbooks from Portuguese vessels before

2007 were not completely recorded in the national database and were also omitted in the graph in order to not give a wrong perception of the effort trend in this period. Spanish data from 2010 and 2011 were not available. See section 4 for more details in data quality provided by Member States. In 2012 there is no Spanish effort under special conditions because no vessel had applied for that in 2012.

Spanish and Portuguese regulated trawlers and Spanish unregulated gears (esp-3a, prt-3a and esp-none, respectively) were the gears deploying more effort in the area in 2012 (31%, 26% and 15% respectively).

The effort of trawlers (3a) under effort restrictions (continuous line) is decreasing since 2003 in the case of Spain and since 2007 in the case of Portugal.

The effort of trawlers (3a) without effort restrictions, i.e. with special conditions (IIB61, dashed line) has been stable between 2004 and 2009 in the case of Spain and in the period 2007-2010 in the Portuguese case, with a slight increase since 2010. As referred above, no Spanish vessel applied for special conditions in 2012.

Spanish unregulated gears (esp-none) effort (Figs. 5.7.1.3 and 5.7.1.4) has been stable in the period 2004-2009. The 2012 esp-none effort is one third of the 2004-2009 level. The effort of the Spanish regulated gillnet (esp-3b, 6%) slightly increased between 2003 and 2009 and was kept at the same level in 2012, while Portuguese regulated gillnet (por-3b, 1%) decreased in recent years. The effort of the Spanish regulated longline (esp-3c, 9%) increased in the last year, while the effort of Portuguese longline (por-3c, 1%) decreased for the vessel with special conditions and was stable for the others. Trammel effort is stable along the period for both Spanish and Portuguese fleets (esp-3t, 3%, and prt-3t, 5%).

Considering the high value of the Spanish unregulated effort (ESP-NONE in Figure 5.7.1.3), a more in-depth analysis was carried out on this group effort composition in 2012 (Figure 5.7.1.4). The “none” effort (24%) in the Figure 5.7.1.4 corresponds to tuna and mackerel gears (troll and hand lines), while otter and gillnet effort (10% and 4%) are from unregulated or non-identified mesh sizes.

Figure 5.7.1.4.- Spanish non regulated gears (ESP-NONE) effort (KW\*day) by gear in 2012. “none” gears (24%) are composed by tuna and mackerel gears (troll and hand lines).

Table 5.7.1.2. Trend in nominal effort (kW\*days at sea) by derogations given in Table 1 of Annex IIB (CR 43/2012), 2000-2012. Derogations are sorted by gear and special condition (SPECON) (all countries together). Data qualities are summarised in section 4.3. Note that the gear type “3t” denotes the non-regulated (effort) trammel gear with all mesh sizes. **No Spanish data in 2010 and 2011.**

| IIB   | 8c-9a | none     | none    | 15,463,293 | 13,920,049 | 16,405,106 | 424,478    | 451,395    | 4,423,777  |            |

Table 5.7.1.2 lists the trend in effort by derogation since 2000 in terms of kW\*days at sea. GT\*days at sea and number of vessels are available on the web. 3a, 3b, special condition 3c and none gears effort have decreased, while non special condition 3c gears effort has markedly increased and 3t effort is stable.

Regulated trawl deploys most effort in the area (56%), being most of it (91%) under effort control in 2012. Passive gears (3b, 3c and 3t) accounted for approximately 27% of all effort in 2012. However, such results have a limited meaning regarding the fishing pressure exerted by these fleets, once the unit kW\*day does not take into account the number of hooks deployed and area covered by the nets and hence it is a poor indicator of the fishing activity. In 2012, about 25% of the effort was assigned to other gears than the regulated ones (“3t” and “none” gears), of which trammel nets (“3t”) contribute 9% to the overall effort deployed. Most of this effort is deployed by gears that do not target hake, *Nephrops* or anglerfish.

Figure 5.7.1.5 shows the effort trends by gear type in the period 2003-2012, the dashed line identifying the period before the enforcement of effort control measures. Years 2010 and 2011 were not included because there were not Spanish data. The effort has decreased since 2003 in regulated trawlers (3a) and since 2009 in regulated gillnet (3b) and non regulated gears (none). The effort of longline (3c) and trammel (3t) has been stable in the last years.

Fig. 5.7.1.5. Effort trends by gear type (Spain and Portugal together). Years 2010 and 2011 points removed from the graph since there were not Spanish data. Period before effort control measures in dashed line.

#### 5.7.1.1 Spatial distribution of effective fishing effort by rectangle statistical rectangle

Portugal, Spain, France and Scotland submitted effort by ICES rectangle. Figures 5.7.1.1.1, 5.7.1.1.2 and 5.7.1.1.3 show the distribution of Spanish and Portuguese effort for regulated gears, with effort control (“none”) and without effort restriction (“IIB61”) for the period 2003-2012. For the years 2010 and 2011, only the effort from Portuguese fleets is plotted because no Spanish data is available for those years. In 2012, no Spanish vessel applied for the effort special condition (IIB61). 2003-2009 Spanish longline effort was misallocated in the figure to specon “none”.

As referred in the introduction of section 5.7, STECF-EWG considers that the use of fishing days (or kW\*days) to manage effort of static gears such as gillnets and longlines is a very poor approximation of the effective effort. Although the figures present the effective effort in the same units, the effort deployed by the different gear groups is not comparable.

No changes in the effort distribution pattern have been identified since the implementation of the fishing effort regulation.

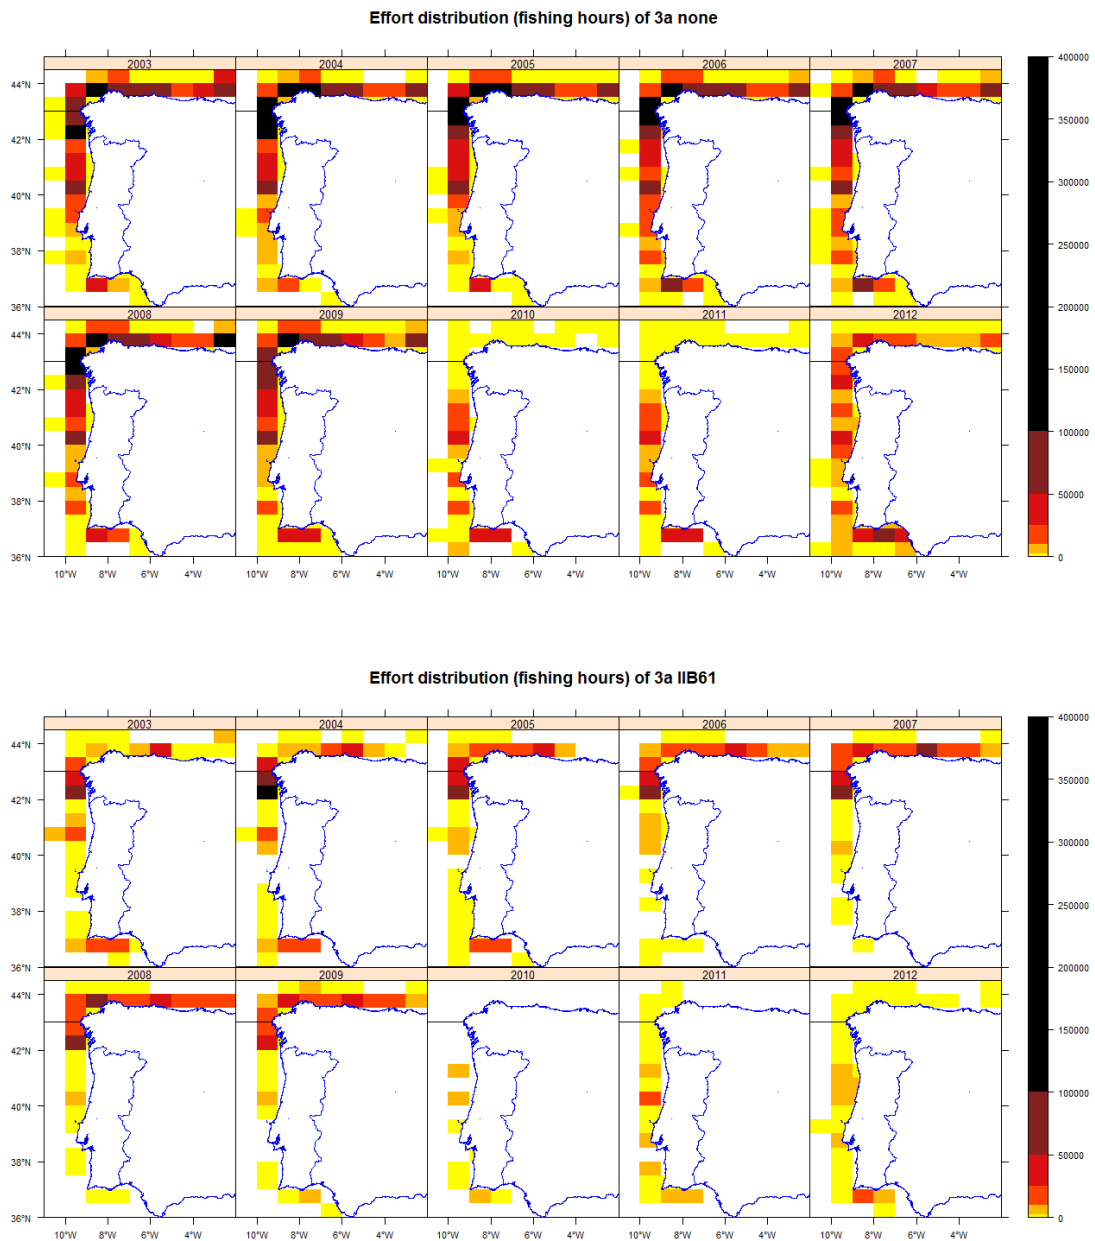

Figure 5.7.1.1.1. Effort spatial distribution for regulated trawl (gear 3a) without (upper panel) and with special conditions (lower panel) for the period 2003-2012. **No Spanish data for the years 2010 and 2011.** In 2012 no Spanish vessel applied for the effort special condition (IIB61).

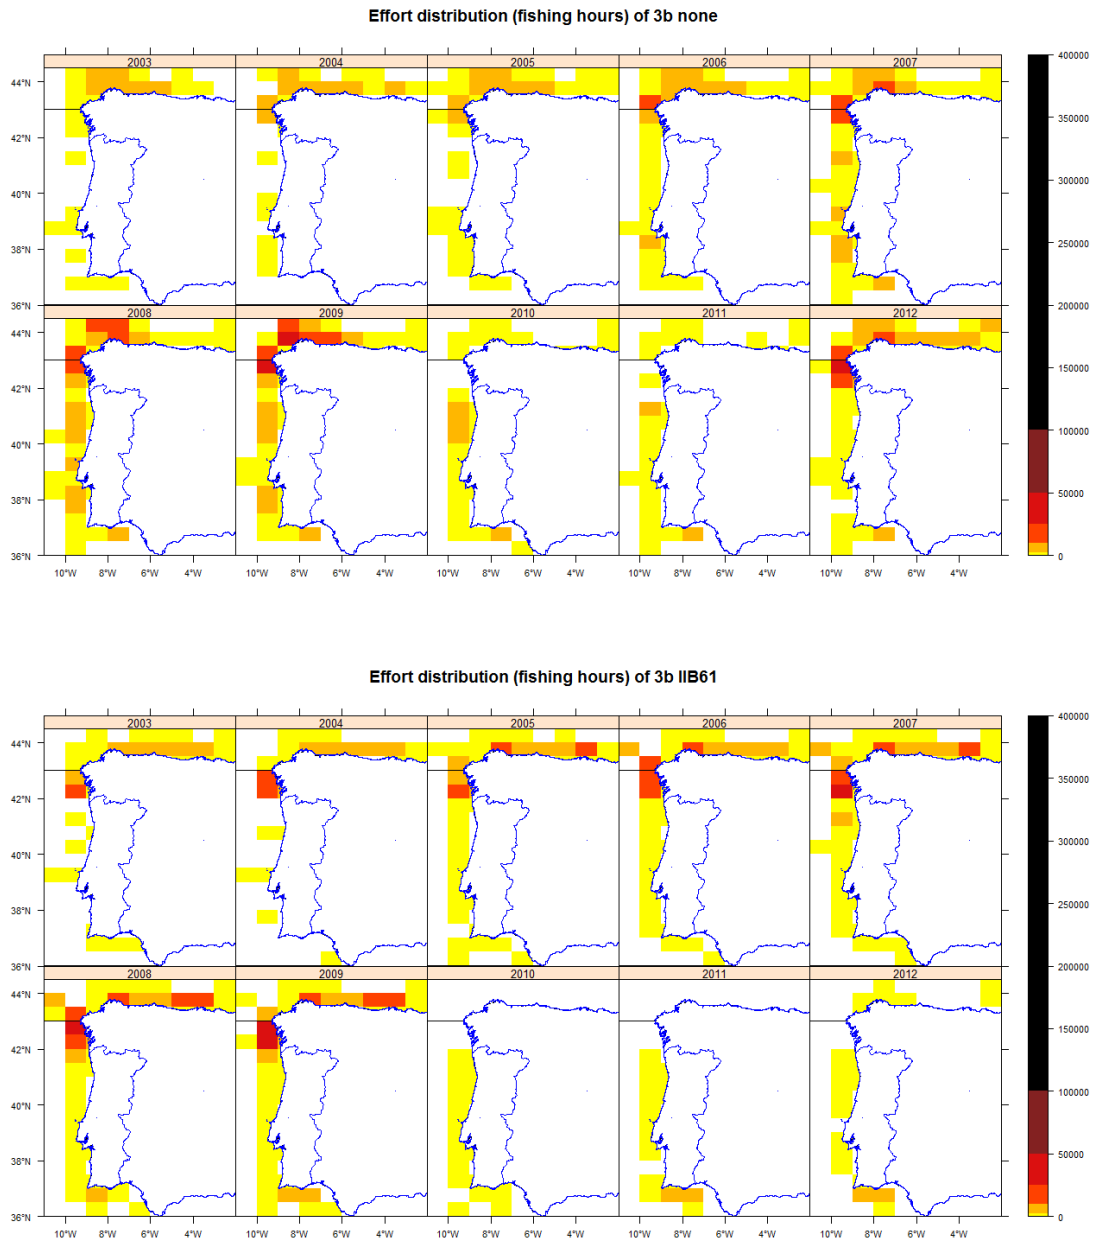

Figure 5.7.1.1.2. Effort spatial distribution for regulated gillnets (gear 3b) without (upper panel) and with special conditions (lower panel) for the period 2003-2012. **No Spanish data for the years 2010 and 2011.** In 2012 no Spanish vessel applied for the effort special condition (IIB61).

Figure 5.7.1.1.3. Effort spatial distribution for longlines (gear 3c) without (upper panel) and with special conditions (lower panel) for the period 2003-2012. **No Spanish data for the years 2010 and 2011.** In 2012 no Spanish vessel applied for the effort special condition (IIB61). By mistake, in the period 2003-2009, all Spanish effort under category “3c IIB61” was submitted as “3c none”.

### 5.7.2 ToR 1.b Catches (landings and discards) of hake and Norway lobster in weight and numbers at age by Member State and fisheries

In May and June of 2013 landings and discards from 2012 were provided by Spain, France and Ireland, updating the series previously submitted. Portugal provided discards data for otter trawl for the period 2004-2011. Landings time series in the EWG database included 2003-2012 data, from 2004 in the case of discards. The Netherlands, England and Scotland provided sporadic landing information in previous years. Spain did not provide 2010 and 2011 data.

Member States (MS) did not provide hake information by age because there are relevant doubts about this species ageing (ICES, 2009, 2010a). For *Nephrops* there is not a standardized ageing methodology. Length composition of the catches presented to ICES assessment working groups are available for the DCF metiers, but could not be uploaded to the database because the database uses only age compositions.

Hake landings provided to the EWG database (this report) (2002-2012) come from logbooks and show a decrease of 62% between 2009 and 2012. We can compare these data with the landings data presented for the same area to the 2013 ICES WGHMM in order to check if this high drop is real. ICES WG landings are estimates made from different sources of data and show a decrease between 2009 and 2012 of 24% (Figure 5.7.2.1, left). The landings of the EWG and the ICES WG were more or less the same until 2009 but in 2012 EWG landings are half of those from the ICES WG. This is because logbooks do not reflect landings that are presented from other sources of data as sales notes that provided more reliable values.

Hake discard data provided to the EW data base (for 2004-2012 trawl) show certain variability around 2,000 tonnes per year and the values are quite similar to those presented by the Member States in the ICES WGHMM. The discards of hake in 2012 seem to be around 33 and 44% less than in 2009 (Figure 5.7.2.1, right). Hake discard quality index was A (high representativeness) in all cases (2004-2012 trawl).

Figure 5.7.2.1. Comparison of the 8c & 9a hake landings and discards (tonnes) presented to ICES WGHMM and STECF EWG data base (this report) for all countries and gears (1972-2012). There were no Spanish data from 2010 and 2011 in EWG. Notice the different scale of both graphs.

*Nephrops* landings provided to the EWG database (this report) (2002-2012) come from logbooks and show an increase of 11% between 2009 and 2012. We can compare these data with the landings data presented for the same area to the 2013 ICES WGHMM. ICES WG landings are estimates made from different sources of data and show an increase between 2009 and 2012 of 17% (Figure 5.7.2.2). The landings of the EWG were much less than those from the ICES WG until 2007, since then both seem to be more or less at the same level.

In general, there are no *Nephrops* discards either in Spanish or in Portuguese fisheries because of its very high commercial value. However, discards estimates are presented for Spanish trawl catches in 2004 and 2005 according to the EWG procedures using exceptional and not very precise Portuguese discard rates (considering the high CV of the estimates) for those years. *Nephrops* stocks are managed in Functional Units (FU), subdivisions of the ICES areas, and the discard rates from one FU should not be applied to the whole ICES area. Even taking into account these data, *Nephrops* discards in EWG is zero tonnes in all years except 4 tonnes in 2004 and 12 tonnes in 2005.

Figure 5.7.2.2. Comparison of the 8c & 9a *Nephrops* landings and discards (tonnes) presented to ICES WGHMM and STECF EWG data base (this report) for all countries and gears (1975-2012). There were no Spanish data from 2010 and 2011 in EWG.

The contributions of the different group of gears to the overall landings can be taken from Table 5.7.2.1. The following tables and figures represent the landings and discards by group of gears in weight for hake (HKE) and *Nephrops* (NEP).

Table 5.7.2.1. Hake and *Nephrops* landings and discards (t) by species and derogation, 2003-2012. Regulation gears codes according to the CR No 41/2007: “3a” – bottom trawls of mesh size  $\geq 32$  mm, “3b” – gillnets of mesh size  $\geq 60$  mm, “3c” – bottom long-lines. Gear type “3t” denotes the non-regulated (effort) trammel gear with all mesh sizes, gear type “none” contains other gears and the gears not allocated. “--“ means “not available”, “0” means “0 tonnes”. **No Spanish data for 2010 and 2011.**

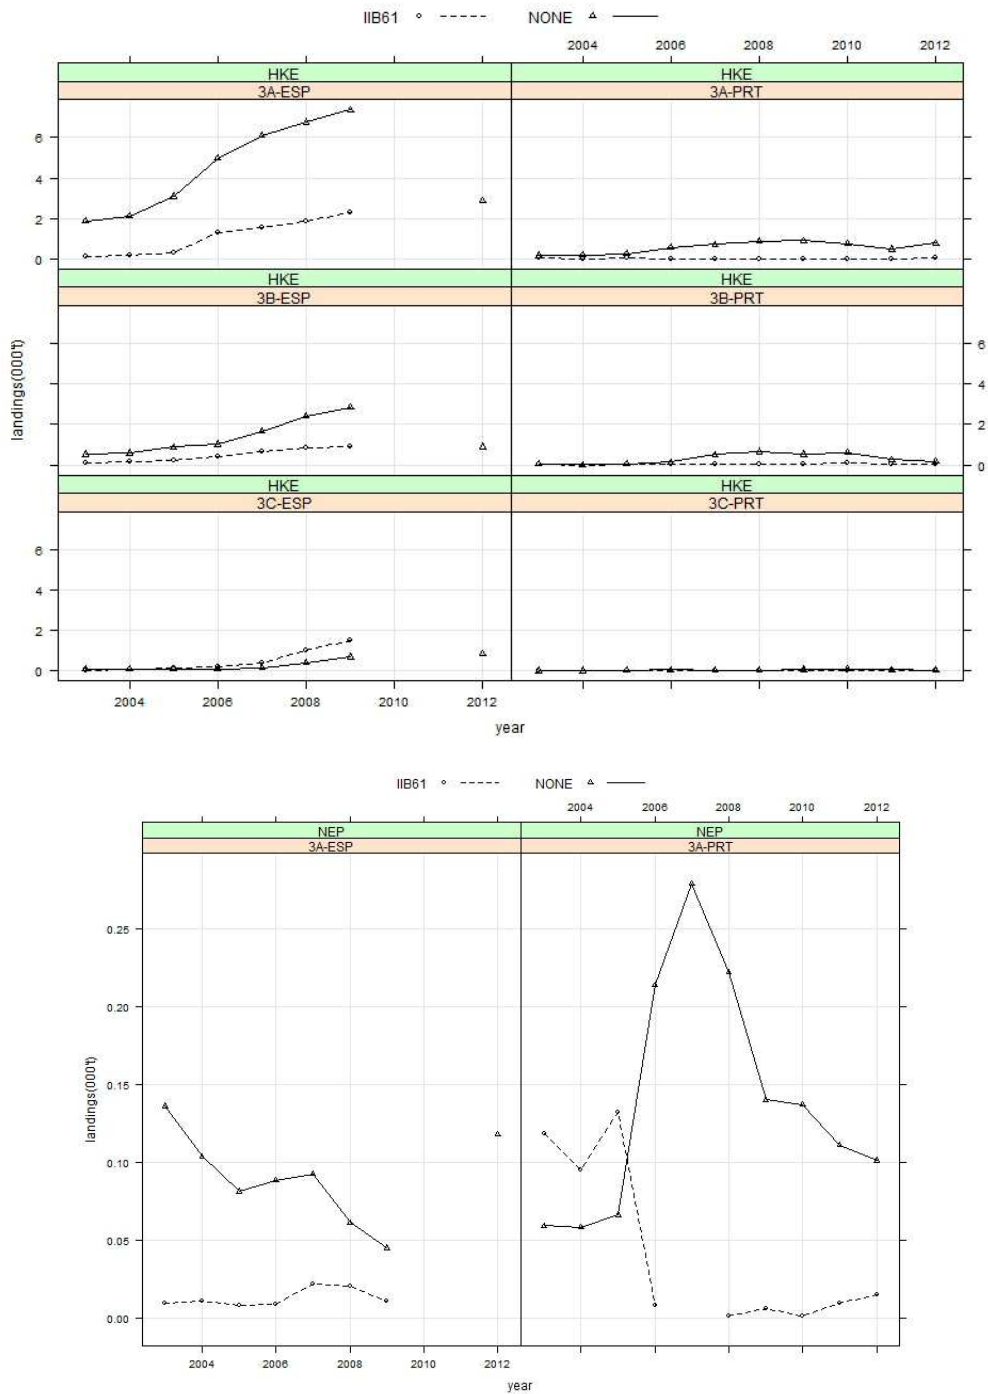

Fig. 5.7.2.3. Trends in landings of hake and *Nephrops* by Member State, regulated gear and specon. In 2012 there were not Spanish specon landings because no vessel applied for those special conditions.

There is a decrease in the Spanish hake landings from 2009 to 2012 for trawl, gillnet and bottom longline (Fig. 7.7.2.3) that does not seem very realistic (see previous comments about Fig. 5.7.2.1). Portuguese landings of hake are more or less stable in recent years except for a slight decrease in gillnet.

There is an increase in the Spanish landings of *Nephrops* from 2009 to 2012 and a decrease in the Portuguese landings since 2007.

Figure 5.7.2.4. Hake landings by fleet in 8c & 9a in 2012 (ESP: Spain, PRT: Portugal, FRA: France).

The Spanish regulated trawlers (3a) land 41% of hake, followed by Spanish regulated gillnetters (3b, 13%) and Spanish regulated longliners (3c, 12%, Fig. 5.7.2.4). All the Spanish regulated gears were in 2012 under the normal effort regime, since no vessel had requested to operate under special conditions.

Figure 5.7.2.5 Hake and Norway lobster catches by gear for the years 2003-2012 (discards presented in white colour), Spanish and Portuguese data together. **Spanish data for 2010-2011 not available.**

The data given in the Table 5.7.2.1 form the basis of the Figure 5.7.2.5 displaying the relative catch compositions by species and gear for the years 2003-2012. The very low catches in 2010 and 2011 are related to the lack of information from Spanish fleets. Most of hake catch comes from regulated trawlers (3a, Figure 5.7.2.5). Gillnets and longlines also catch large amounts of hake. In what concerns Norway lobster, the catches come almost exclusively from trawl.

### 5.7.3 ToR 1.c Catches (landings and discards) of species other than hake and Norway lobster, in particular anglerfish, in weight and numbers at age by Member State and fisheries

In May and June of 2013, other species landings and discards from 2012 were provided by Spain, Portugal and France. Spain and Portugal also provided sporadic discard data of some species for the period 2004-2011. Landings time series in the EWG database included 2003-2012 data, from 2004 in the case of discards. France, Ireland, Holland, England and Scotland provided sporadic landing information in previous years. Spain did not provide data for the years 2010 and 2011.

Numbers at age were submitted by Spain in 2010 for anchovy, blue whiting and mackerel for the period 2003-2008.

Figure 5.7.3.1. Comparison of the 8c & 9a anglerfish landings (tonnes) presented to ICES WGHMM and STECF EWG data base (this report) for all countries and gears (1980-2012). There were no Spanish data from 2010 and 2011 in EWG.

Anglerfish landings provided to the EWG come from logbooks and show a decrease between 2009 and 2012. Anglerfish landings provided to the WGHMM come from different sources of data and show a similar trend (Figure 5.7.3.1).

Table 5.7.3.1. Landings and discards (t) by species and derogation, 2003-2012. Regulated gear codes according to the CR No 41/2007: “3a” – bottom trawls of mesh size  $\geq 32$  mm, “3b” – gillnets of mesh size  $\geq 60$  mm, “3c” – bottom long-lines. Gear type “3t” denotes the non-regulated (effort) trammel gear with all mesh sizes, gear type “none” contains other gears and the gears not allocated. “--“ means “not available”, “0” means “0 tonnes”. **No Spanish data for 2010 and 2011.**

The contributions of the individual derogations to the overall landings can be taken from Tables 5.7.3.1. For brevity, landings and discards in weight by derogation are restricted to anglerfish (ANF), horse mackerels (JAX), mackerel (MAC), rays (RAJ) and blue whiting (WHB). Note that ANF, JAX and RAJ include more than one species.

Fig. 5.7.3.2. Trends in landings of anglerfish by Member State, regulated gear and specon. All the Spanish vessels were under the effort regime (none) in 2012.

From these species, special attention is given to anglerfishes (Figures 5.7.3.1 and 5.7.3.2). However, the group anglerfish includes two species, *Lophius piscatorius* and *L. budegassa*, which are in different exploitation status and have different areas of distribution. Landings are decreasing in the Spanish regulated trawl and gillnet and are stable in the other cases (Fig. 5.7.3.2).

Figure 5.7.3.3. 2012 anglerfish landings by fleet in 8c & 9a (ESP: Spain, PRT: Portugal, FRA: France).

Figure 5.7.3.3 shows the 2012 anglerfish landings by fleet. The Spanish regulated trawlers (3a) land 41% of anglerfish, followed by Portuguese trammel (3t, 18%), Portuguese regulated trawl (3a, 15%), Spanish regulated gillnetters (3b, 14%) and others. All the regulated Spanish gears were under the normal effort regime in 2012.

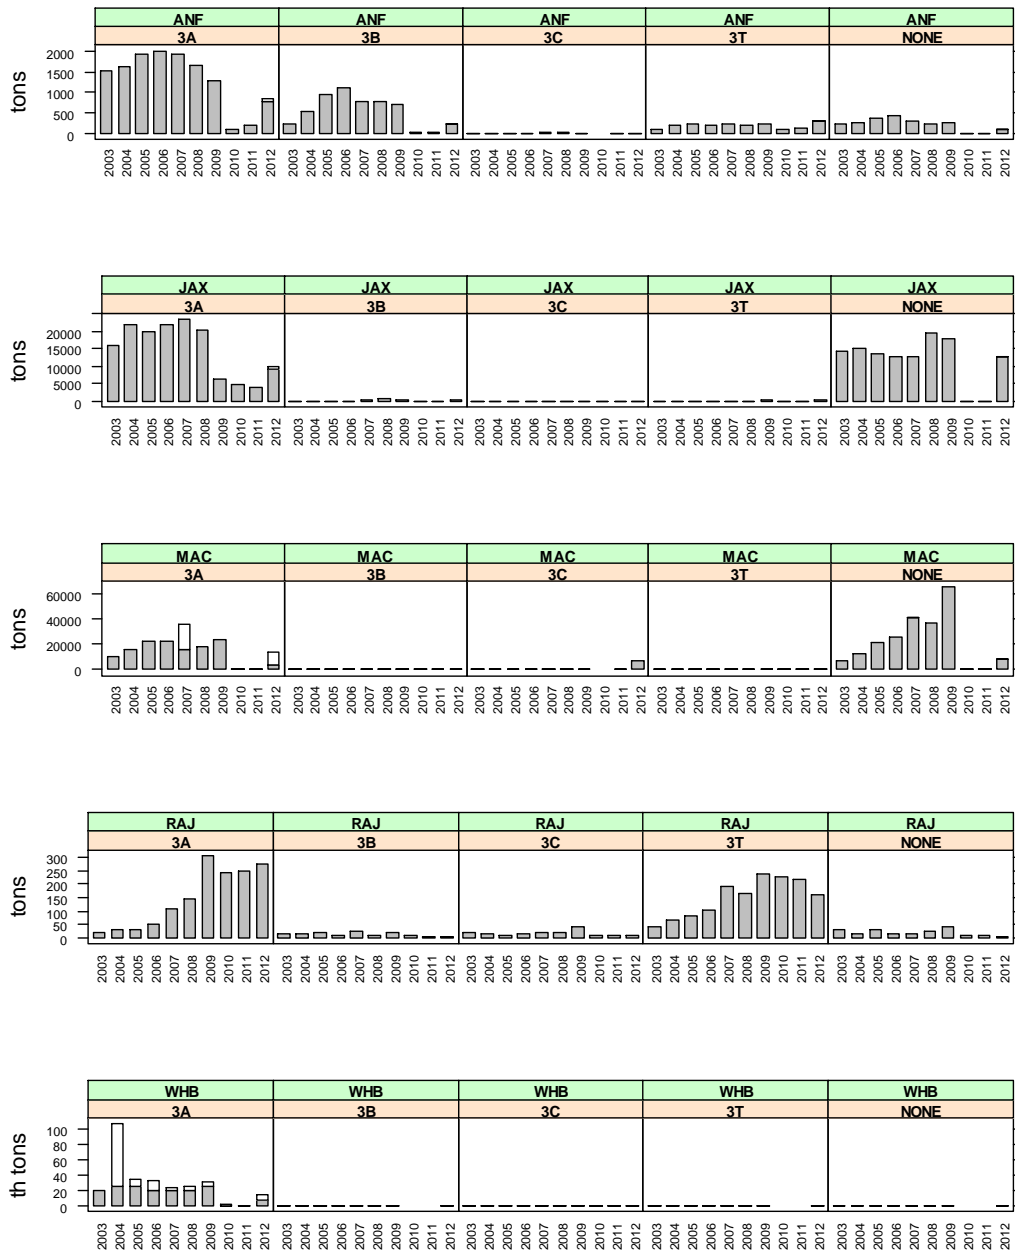

Figure 5.7.3.4. Landings by species and gear for the years 2003-2012 (discards presented in white colour). **Spanish data for 2010-2011 not available.** (ANF = Anglerfishes, JAX = *Trachurus spp.*, MAC = Mackerel, RAJ = Rays and WHB = Blue Whiting). Anglerfish discard quality index was A (high representativeness) in all cases (2012 trawl).

The data given in the Table 5.7.3.1 form the basis of the Figure 5.7.3.4 displaying the catches of anglerfish, horse mackerels, mackerel, rays and blue whiting by gear for the years 2003-2012. The lack of white bars further indicates that discard data were not provided or there were no discards. The very low catches in 2010 and 2011 are related to the lack of information from Spanish fleets.

Regulated trawlers (3a) harvest high quantities of horse mackerels, mackerel and blue whiting (Figure 5.7.3.4). The main species in unregulated gears (NONE) are mackerel and horse mackerels.

In the Figure 5.7.3.5 we can observe the species landed by the regulated gears. Small pelagics like horse mackerels, blue whiting and mackerel represent a high percentage of landings in weight. Figures 5.7.3.6, 5.7.3.7 and 5.7.3.8 show that regulated gears obtain representative parts of the total landings of these species.

Fig. 5.7.3.5. Species composition of landings in regulated gears for the year 2012.

Figure 5.7.3.6. 2012 horse mackerel landings by fleet in 8c & 9a (ESP: Spain, PRT: Portugal)

Figure 5.7.3.7. 2012 mackerel landings by fleet in 8c & 9a (ESP: Spain, PRT: Portugal).

Figure 5.7.3.8. 2012 blue whiting landings by fleet in 8c & 9a (ESP: Spain, PRT: Portugal)

#### 5.7.4 ToR 1.d CPUE and LPUE of hake, Norway lobster and anglerfish by fisheries

Hake LPUE have a high increase between 2003 and 2009 (Figure 5.7.4.1), this fact is corroborated with the ICES WGHMM information (Figure 5.7.4.2). The assessment performed by WGHMM in May 2013 (ICES, 2013) shows that hake biomass has increased since 2006.

Fig. 5.7.4.1. Hake LPUE for otter trawl (gear 3a) for all countries from 2003 to 2009. LPUE points for the period 2010-2012 are omitted because Spanish data for 2010 and 2011 are not available and hake landings in 2012 are considered not reliable.

Fig. 5.7.4.2. Hake LPUE from 1985 to 2012 from the 2013 ICES WGHMM.

*Nephrops* data in 8c9a are mostly from Functional Units 28 and 29, in SW and S Portugal (9a). The remaining FUs, from Cantabrian Sea (8c) and 9a North are almost depleted. *Nephrops* is caught as by catch from other fisheries in very low quantities. Figure 5.7.4.3 compares the standardized *Nephrops* CPUE presented in WGHMM for FUs 28 and 29 (ICES, 2012) and the CPUE derived from the data presented to this EWG, considering only the Portuguese catches and effort. In the case of this species,

discards are negligible and catches are considered equal to landings. The overall trend since 2005 is decreasing in both cases, although there is a slight increase in 2012 in WGHMM data and stability in EWG data. The EWG CPUE was estimated only for Portuguese bottom trawl (3a), with demersal trawl and crustacean trawl together. The standardized CPUE presented to WGHMM (ICES, 2013) was estimated only for Portuguese crustacean trawl fleet and using only trips targeting *Nephrops*.

Figure 5.7.4.3 Comparison of *Nephrops* CPUE trends in Functional Units 28 and 29 (SW and S Portugal, within area 9a) using only Portuguese catch and effort data (EWG: CPUE estimated with this EWG data; WGHMM: CPUE estimates presented at WGHMM).

#### Information on small boats (<10m by area)

Only Portugal has provided data for vessels below 10 m operating in areas 8c-9a, though specifying neither gear nor fishery. These vessels operate, in general, with several gears and do not fill logbooks. Data on catch and effort for these vessels are based on landings records. However, as no data from Spain were available and Annex IIB does not include limitations on this fleet effort, no analysis on this fleet segment was performed.

Since 2003, Portugal has carried out a specific sampling plan to collect data on the activity of the small scale fleet (<10m vessels) operating in continental waters. The data is collected with a stratified random strategy by skippers' interviews, and provides information about catches by species and effort. This sampling plan is under the scope of Reg. (EC) 1639/2001 and the results are presented on the DCF annual reports requested by the DGMARE.

#### 5.7.5 ToR 2 Remarks on quality of catches and discard estimates

Discards are only provided for trawl, for all time series for hake and sporadically for other species. Discard quality index was A (high representativeness) for hake, *Nephrops*, blue whiting and monkfish in all cases. Although some discards were reported in 2004-2005, *Nephrops* discards are considered zero or negligible. This species has a high market value and almost no *Nephrops* below the minimum landing size is caught.

For more detailed information on quality of catches and discard estimates, see the section 4 “Data Quality” for each country.

*5.7.6 ToR 3 Trend in calculated maximum effort of regulated gears and uptake by Member State*

No adequate data are available to address this ToR. The allowed activity by vessel for the period 2003-2012 is presented in Table 5.7.3. Although the field “Number of Vessels” in Effort database has been filled, the data on the fishing activity is incomplete. Also, the vessels included can operate with different area/fishery/gear/mesh size combinations and therefore, the same vessels may be included in different records. Spain did not present any data on the fishing activity in 2000-2009.

*5.7.7 ToR 4 Correlation between partial hake mortality and fisheries*

Depending on data availability this ToR will be addressed during the follow-up meeting STECF EWG 13-13, in October 2013.

*5.7.8 ToR 5 Considerations in order to accomplish spatio-temporal patterns in standardized catchability indices for hake, Nephrops and anglerfish*

Depending on data availability this ToR will be addressed during the follow-up meeting STECF EWG 13-13, in October 2013.

## 5.8 Western Channel effort regime evaluation in the context of Annex IIC to Council Regulation (EC) No 57/2011)

### 5.8.1 ToR 1.a Fishing effort in kWdays, GTdays, and number of vessels by Member State and fisheries

STECF EWG-13-06 notes that assignment of derogations and special conditions is based on best expert knowledge. Data errors may exist regarding the huge data bases and the special knowledge required to deal with them (grouping and exact formulation of data queries).

STECF EWG noted six years ago a change in Annexes IIC to Council Reg. 41/2007 for 2007 as compared to the Annex IIC to 51/2006 which removed the special conditions IIC71a and IIC71b to static nets <220mm (3b). STECF EWG further notes that there were no special derogations added to Annex IIC of Council Reg. 40/2008, Annex IIC of Council Reg. 43/2009, Annex IIC of Council Reg. 53/2010 or Annex IIC of Council Reg. 57/2011, or Annex IIC of Council Reg. 43/2012. Table 5.8.1.1 lists the historic developments of days at sea by vessel and derogations.

Table 5.8.1.1 – Western Channel - Historic trends in days at sea by vessel specified in the Council Regulations since 2005.

| Annex | AREA | REG GEAR   | SPECON  | 2005 | 2006 | 2007 | 2008 | 2009 | 2010 | 2011 | 2012 | 2013 |
|-------|------|------------|---------|------|------|------|------|------|------|------|------|------|
| IIc   | 7e   | 3a         | none    | 240  | 216  | 192  | 192  | 192  | 164  | 164  | 164  | 164  |
| IIc   | 7e   | 3b         | none    | 240  | 216  | 192  | 192  | 192  | 164  | 164  | 164  | 164  |
| IIc   | 7e   | 3b deleted | ICC71ab |      | 365  |      |      |      |      |      |      |      |

The previously identified French data problems affecting 2002 have so far not been corrected. STECF EWG decided therefore only to provide effort trends graphically starting from 2003. For brevity and clarity in this report only information since 2004 are tabulated. The dominating fleet from the two existing derogations in 7e (3a and 3b) is by far the English beam trawl fleet with percentages in the last 8 years in excess of 55% of the effort deployed (Table 5.8.1.2 and Figures 5.8.1.1 and 5.8.1.2). The other fleets involved are the French static gear fleet with a decreasing trend from 22% in 2006 to 8% in 2012 of the deployed effort and the Belgian beam trawl fleet with an increasing trend from less than 1% in 2000 up to about 16% in 2007 followed by a fluctuation around 13%. STECF-EWG however notes that about 85% of the overall effort deployed could not be allocated to regulated gear (e.g. gears outside the regulation such as otter- and pelagic trawls, dredges and pots). The “total” trend in Figure 5.8.1.2 is therefore highly influenced by the none regulated gear group. Regulated gears remain low. The composition of the unregulated gears can be found in Table 5.8.1.7. Figure 5.8.1.3 shows the trends for all the unregulated gear in area VIIe.

The differences between the data provided in 2011 and 2012 in effort (kW\*days at sea) are provided in Table 5.8.1.3. The main differences appear in the Danish revisions in Otter trawl and Per Trawl the earlier time series (up to 26%). The 40% difference of the Scottish dredges in 2010 is likely to be an error in submission.

Information on GT\*days at sea and the number of vessels active in 7e is presented in Tables 5.8.1.4 and 5, respectively.

The trends in the nominal effort of the two derogations (3a and 3b) are illustrated in Table 5.8.1.6. The beam trawl fleets decreased gradually from 2% below the 2004 level in 2005 to 39% below that level in 2009. Thereafter it increased again to a relative effort deployed in 2012, 28% below the 2004 level. Also the static gear effort dropped substantially from 4% below the 2004 level in 2006 to a 71% below the 2004 level in 2012.

Category 'none' represents unregulated gear types and mesh sizes in addition to unidentified mesh sizes. The effort of the unregulated gear group 'None' has been around 85% of the overall nominal effort for the whole time series.

Table 5.8.1.7 shows the disaggregation of the 'none' category into the different gears categories. Effort by otter trawl is by far the dominant gear category with percentages in excess of 41% for all years. Dredges contribute around 25%. Pelagic trawl and pots contribute each about 10% to the overall effort of the non regulated gear. The rest of the gears also account for about 10%.

Table 5.8.1.2 – Western Channel - Trend in nominal effort (kW\*days at sea) by existing derogations given in Table 1 of Annex IIC (Coun. Reg. 43/2012) and Member State, 2004-2012. Derogations are sorted by gear, special condition (SPECON), and country. Data qualities are summarised in Section 4 of the report.

| ANNEX | REG AREA COD | REG GEAR COD | SPECON | COUNTRY | 2004     | 2005     | 2006     | 2007     | 2008     | 2009     | 2010     | 2011     | 2012     |

Table 5.8.1.3 – Western Channel – Percentage difference in effort (kW\*days at sea) by existing derogations given in Table 1 of Annex IIC (Coun. Reg. 43/2012) and Member State, 2004-2011. Derogations are sorted by gear, special condition (SPECON), and country. Data qualities are summarised in Section 4 of the report.

Table 5.8.1.4 – Western Channel - Trend in GTdays (GT\*days at sea) by existing derogations given in Table 1 of Annex IIC (Coun. Reg. 43/2012) and Member State, 2004-2012. Derogations are sorted by gear, special condition (SPECON), and country. Data qualities are summarised in Section 4 of the report.

### 5.8.2 ToR 1.b Catches (landings and discards) of sole in weight and numbers at age by fisheries

Although the data available for the review of Annex IIC of regulation 53/2010 comes from all countries involved in the fisheries, there is little information on discards for most of the species. Only very sparse discard information is available for anglerfish, cod, haddock, hake, plaice, sole and whiting. The lack of discard information on plaice in particular, increases the likelihood of incorrect assumptions on total removals for that species.

Table 5.8.2.1 lists the landings, discards, discard rates and a “Discard Coverage Index” for the sole by derogations (see explanation of “Discard Coverage Index” in section 4.5). In the regulated beam trawl gear (3a) the discard rates never supersede the 1% and gets an A classification for “Discard Coverage Index” for all years. Discard rates for the regulated static gear (3b) is only available for 2012 and gets a C categorisation for “Discard Coverage Index”. For brevity, the following sections represent the landings and discards by derogation in weight for a subset of the species caught ie. anglerfish (ANF), cod (COD), haddock (HAD), hake, (HKE), Nephrops (NEP), plaice (PLE), saithe (POK), sole (SOL), and whiting (WHG). However, additional data queries for other species can be made depending on data provisions of the national catches by the experts or national institutes. The data given in the table form the basis of Figure 5.8.2.1 displaying the catch compositions by derogations for the years 2004-2012. The absence of dark bars representing discards also indicates lack of observations rather than low discard numbers.

Figure 5.8.2.1 shows that in the beam trawl fleets (3a) landings of anglerfish have substantially increased in 2010, 2011 and 2012. Sole landings have been fluctuating around average. The lower landings for sole in 2003 and 2004 are likely to be an artefact as they are about 50% lower than the landings submitted to ICES (landings used in the assessment of sole 7e). See also section 5.8.10 where the data points for 2003 and 2004 were omitted from the partial F evaluations. For comment on the other species, see section below (*Tor 1.c*).

Table 5.8.2.2 provides the sole catches of the unregulated gear types. The sole catches of the unregulated gear are in excess of 27% of the overall sole catches in area 7e for each year of the data series (2004-2012). The otter trawl fleet is the main fleet involved with percentages in excess of 22%. For 2012 the unregulated gears account for 27% of the overall sole catches where the otter trawl fleet is responsible for 22% of these catches.

Again STECF-EWG would like to mention that there is little information on discards for area 7e and therefore that the above percentages are more likely to be representative of landings than of total catches.

Tab. 5.8.2.1 Western Channel - Landings (t), discards (t) and relative discard rates for sole and derogation, 2004-2012 – Note: Discard information for area 7e are sparse and not available for all countries. The bottom part of the table repeats the discard rates together with a “Discard Coverage Index” A,B or C. (see explanation of “Discard Coverage Index” in section 4.5).

The relative contribution of sole weights in the catch (Table 5.8.2.3) shows an increase from 2003 to 2006 and stabilization afterwards for the dominating beam trawls (3a), which coincides with a decrease of the category “none”, mainly otter trawls which are not effort regulated in Annex IIc. STECF EWG notes however that this otter trawl fleet is generally responsible for about 25-30% of the estimated sole and plaice catches in weight and about 85% of the cod catches in weight. The static nets with mesh size <220 mm (3b) are taking around 4-11% of sole catches in weight. There is no difference in ranking of the derogations according to the year 2012 or the average of 2010-2012.

Table 5.8.2.3 Western Channel - Ranked derogations according to relative sole catches in weight (t) 2004-2012. Ranking is according to the year 2012 and the average 2010-2012.

### 5.8.3 ToR 1.c Catches (landings and discards) of non-sole species in weight and numbers at age by fisheries

Table 5.8.3.1 lists the landings, discards, discard rates and a “Discard Coverage Index” for the main species except sole by derogation, 2004-2012 (see explanation of “Discard Coverage Index” in section 4.5). As the “none” category is a mixture of gear, discard rates (sometimes available from otter trawls) are not tabulated.

For anglerfish, only discard information is available for the regulated beam trawl gear (3a), fluctuating between 6% and 13% with a C qualifier for “Discard Coverage Index” for almost all years. Sparse information from otter trawls suggests discard rates around 17%.

For cod, discard information for the regulated beam trawl gear (3a) is available since 2003, varying between extreme values (0%-90%) with all “Discard Coverage Index” categories (A,B and C). The regulated static gear (3b) discard rates vary between 0% and 28% with a “Discard Coverage Index” of C. Information from otter trawls suggests discard rates between 0% and 83% with a “Discard Coverage Index” of C. STECF-EWG would like to point out the huge spread of discard rates and that most of these values are obtained with a “Discard Coverage Index” of C. The 0% discard rates with a “Discard

Coverage Index” of A are very likely not reflecting an overall year behaviour of any gear. This applies also to other non-sole species.

For plaice, discard information for the regulated beam trawl gear (3a) is available since 2003, varying between extreme values (0%-8%) with predominantly a “Discard Coverage Index” of A. Very few discard information is available for the regulated static gear (3b), varying between 0% and 12% with a “Discard Coverage Index” of C. Information from otter trawls suggests discard rates between 0% and 26% with a “Discard Coverage Index” of B.

Figure 5.8.3.1 incorporates next to sole, also the other main species in the fisheries.

The landings of anglerfish for the beam trawl fleets (3a) have substantially increased in 2010, 2011 and 2012 whereas the landings of the regulated static gear (3b) has substantially decreased over that period.

Plaice catches for the regulated beam trawl gear (derogation 3a) have fluctuated around average. The catches (predominantly landings) of the other main non-sole species have been stable at low levels. The substantial cod discards in 2013 should be allocated to a very good recruitment year class 2009. Landings by static nets (derogations 3b) are dominated by anglerfish which show a sharp decline since 2010. The category “none” which is responsible for most of the landings (except for sole, plaice and partly anglerfish) consist mainly of otter trawls. Information from otter trawls suggest that there is substantial discarding of cod, haddock and whiting. However, it should be noted that there is almost no discard information available for the period before 2010, and therefore no trends in discard practices can be concluded. Landings of anglerfish have dropped substantially in 2010; whereas landings of cod, haddock and whiting have increased since 2005 (Haddock landings have more than double in 2011 and go inside with high discarding). It appears that the very strong cod year class 2009 was heavily discarded as 0 year old fish by the otter trawlers. All the 2012 landings are somewhat lower than the 2011 landings. Information on landings and discards at age will be elaborated during the follow-up meeting STECF EWG 13-13.

Table 5.8.3.2 provides the cod catches of the unregulated gear types. The cod catches of the unregulated gear are in excess of 84% of the overall cod catches in area 7e for each year of the data series (2004-2012). The otter trawl fleet is taking the bulk of these catches with percentages in excess of 80%. For 2012 the unregulated gears account for 88% of the overall cod catches where the otter trawl fleet is responsible for 81% of these catches.

Table 5.8.3.3 provides the plaice catches of the unregulated gear types. The plaice catches of the unregulated gear are in excess of 23% of the overall plaice catches in area 7e for each year of the data series (2004-2012). The otter trawl fleet is the main fleet involved with percentages in excess of 22%. For 2012 the unregulated gears account for 33% of the overall plaice catches where the otter trawl fleet is responsible for 32% of these catches.

For the main pelagic species, herring, horse mackerel, mackerel and sprat, discard information is very sparse and only sometimes available for otter trawls with a “Discard Coverage Index” of C (information on the STECF website).

Again STECF-EWG would like to mention that there is little information on discards for area 7e and therefore that the above percentages are more likely to be representative of landings than of total catches.

Tab. 5.8.3.1 Western Channel - Landings (t), discards (t) and relative discard rates by species and derogation, 2004-2012 – Note: Discard information for area 7e is sparse and not available for all countries. The bottom part of the table repeats the discard rates together with a “Discard Coverage Index” A,B or C. (see explanation of “Discard Coverage Index” in section 4.5).

#### 5.8.4 ToR 1.d CPUE and LPUE of sole, plaice and cod by fisheries and Member States

Limited discards are available for sole, plaice and cod, therefore LPUE for sole, plaice and cod are represented in Tables 5.8.4.1-6. Figures 5.8.4.1-3 show CPUE and LPUE trends for sole, plaice and cod since 2003. Graphically, only the regulated gears and the most important unregulated gears (otter trawl and dredges) are presented.

Tables showing CPUE by gear groups (regulated and unregulated), area and nation are not presented in this report but are available on the JRC website: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

For sole the regulated beam trawl gear (3a) show a stable trend for the main fleets of England, France and Belgium with values of around 150, 250 and 45 g/kW\*days respectively. The high value for the French beamers could be explained because they are predominantly smaller boats with smaller engines compared to the English and Belgium beam trawl fleet. The low values for the Belgian fleet reflect more the “non targeting” nature of the fleet for sole. The CPUE and LPUE from the French static gear (3b) fluctuates highly from year to year between 30 and 150 g/kW\*days whereas the English static gear is more stable around 50 g/kW\*days.

The highest CPUE and LPUE for plaice are recorded by the Belgian beam trawl fleet (3a), fluctuating between 70 and 300 g/kW\*days, closely followed by the English beam trawl fleet of around 250 g/kW\*days over the whole period. French beam trawl CPUE and LPUE has increased sharply from 16 g/kW\*days in 2007 to about 115 g/kW\*days in 2011. The English otter trawl fleet also showed a sharp increase from 73 g/kW\*days in 2007 to 170 g/kW\*days in 2011 and 158 g/kW\*days in 2012.

Cod CPUE and LPUE have the highest values for English static gear (3b) with a sharp increase from 38 g/kW\*days in 2008 to 167 g/kW\*days in 2011. The French otter trawls, fluctuating between 20 and 98 g/kW\*days, whereas the English otter trawl and gill net fleet obtain only values between 5 and 50 g/kW\*days. The large CPUE value for 2009 from the French otter trawls (323 g/kW\*days) resulted from a massive discarding of the 0 year old fish from the strong 2009 year class and is in line with the high CPUE value (141 g/kW\*days) from the English otter trawl fleet.

Table 5.8.4.1 Western Channel - Sole CPUE (g/(kW\*days)) by derogation, Country and year, 2004-2012. Note: Discard information for area 7e area sparse and therefore LPUE is provided in the table. (CPUE is presented in the figures).

### 5.8.5 ToR 2 Information on small boats (<10m)

#### 5.8.5.1 Fishing effort of small boats by Member State

It should be noted that not all countries have submitted information and that the total figures are therefore likely to give an underestimation of effort and catches of this vessel category.

Table 5.8.5.1.1 provides an overview of the effort deployed by vessels >10m (regulated and non regulated gear) and vessels <10m in the Western Channel for the period 2004-2011. The effort from the vessels <10m fluctuates between 13% and 25% of the effort deployed by the vessels >10m.

Table 5.8.5.1.1 Western Channel - Trend in nominal effort (kW\*days at sea) by derogations given in Table 1 of Annex IIC (Coun. Reg. 43/2012), unregulated gear and vessels <10m, 2004-2012.

#### 5.8.5.2 Catches (landings and discards) of sole and associated species by small boats by Member State

Table 5.8.6.2.1 gives a preliminary overview of the catches of some main species (anglerfish, cod, haddock, hake, Nephrops, plaice, saithe, sole and whiting in area 7e for vessels <10m (2004-2012).

STECF EWG would like to mention that although these figures are underestimates, they indicate that between 7% and 14% of the sole catches are taken by vessels < 10m.

More detailed information for vessels <10 meters were available only from France for the period 2003-2007. This information was presented in the 2008 report and is not repeated here. An update will be provided once new data become available.

Table 5.8.5.2.1 Western Channel – Overview of anglerfish, cod, haddock, hake, nephrops, plaice, saithe, sole and whiting catches by vessels <10m, 2004-2012.

## 5.8.6 *ToR 3 Evaluation of fully documented fisheries FDF*

### 5.8.6.1 Fishing effort of FDF by Member State and fisheries in comparison with fisheries not working under FDF provisions

Only England had vessels operating under an FDF fisheries for the first time in 2012. 7 vessels were operational in the FDF fisheries using the regulated beam trawl gear (3a) and one vessel using the unregulated beam trawl gear. The total number of English vessels operating these gears are 43 and 2 respectively.

Effort deployed by the regulated beam trawls (3a) FDF, accounts for 22% of the total English effort for that gear. The unregulated beamers fishing with a FDF licence represented 16% of the total English effort for that gear.

The effort of the FDF fisheries to the total deployed effort by the regulated beamers (3a) and unregulated beamers amount to 17% and 1% respectively.

Table 5.8.6.1.1 Western Channel: (A part 1) total fishing effort for countries with Fully Documented Fisheries (FDF, REM/CCTV), (B) FDF (REM/CCTV) nominal fishing effort (kW\*days) and (A part 2, C) the percentage of total effort attributable to FDFs for 2012

### 5.8.6.2 Catches (landings and discards) of sole and other species taken by FDF fisheries by Member State and fisheries in comparison with fisheries not working under FDF provisions

Only England had vessels operating under an FDF fisheries for the first time in 2012. The landings obligation only applied to sole. Catches of sole accounted for 27% in the regulated beam trawls (3a) and for 36% in the unregulated beamers. The catches of sole from to FDF fisheries to the total international catches of the 3a regulated gears and the unregulated beamers amount for 23% and 28% respectively.

This FDF fisheries also catches 11% of the total catches of plaice, 11% of turbot, 10% of anglerfish and 5% of megrim. Other species represent less than 3% of total catches in this area.

Table 5.8.6.2.1 Western Channel: (A part 1) total catches for sole for countries with Fully Documented Fisheries (FDF, REM/CCTV) (B) catches (tonnes), and (A part 2, C) the percentage of catches attributed to FDFs for 2012.

### 5.8.6.3 Comparative analysis of sole selectivity by FDF fisheries and non-FDF fisheries

STECF EWG 13-06 was unable to address this ToR due to time constraints. The specific request will be dealt with in the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy).

#### 5.8.7 *ToR 4 Spatio-temporal patterns in effective effort by fisheries*

Figure 5.8.7.1 shows the spatial distribution of the effective fishing effort for beam trawl fleets with mesh size  $\geq 80\text{mm}$  (3a) during the period 2003 to 2012. The pattern seems similar for the whole period with higher effort deployed south of Devon.

Figure 5.8.7.2 shows the spatial distribution of the effective fishing effort for static nets with mesh size  $< 220\text{mm}$  (3b) during the period 2003 to 2012. The fishing effort pattern is rather homogeneous over the whole VIIe area and full time series with occasional higher densities of activities along the most southern point of the English coast and off the French coast from Saint-Malo.

Figure 5.8.7.3 shows the spatial distribution of the effective fishing effort for the unregulated beam trawl fleet with no mesh size provided or mesh size  $< 80\text{mm}$  during the period 2003 to 2012. Since 2008, the effort which was predominantly deployed on the English coast and the French coast north of Cherbourg, has substantially decreased in all rectangles and is now more evenly spread over the whole area.

Figure 5.8.7.4 shows the spatial distribution of the effective fishing effort for the unregulated demersal seine during the period 2003 to 2012. The years 2003 and 2004 only indicate activities in 1 rectangle. Since 2005 most effort deployed in the same rectangles off the English coast with a substantial increase in the last 4 years, especially south of Dorset up to the French coast.

Figure 5.8.7.5 shows the spatial distribution of the effective fishing effort for the unregulated dredges during the period 2003 to 2012. Most effort deployed off the English coast and off the coast of Saint Malo.

Figure 5.8.7.6 shows the spatial distribution of the effective fishing effort for the unregulated gill nets during the period 2003 to 2012. A similar pattern appears apparent of effort deployment for all years over almost the whole VIIe area, with higher concentrations on the most southern part of the English coast and off the coast of Saint-Malo. In 2010, 2011 and 2012 they appear to be less effort deployed along the French coast.

Figure 5.8.7.7 shows the spatial distribution of the effective fishing effort for the unregulated longlines during the period 2003 to 2012. Again, a similar pattern appears apparent of effort deployment for all years over almost the whole VIIe area, with the highest concentrations along the English coast off Brixham.

Figure 5.8.7.8 shows the spatial distribution of the effective fishing effort for the unregulated otter trawls during the period 2003 to 2012. From 2003 until 2012 a similar pattern appears apparent of effort deployment over almost the whole VIIe area with higher concentrations along the English coast and off the coast of Saint Malo.

Figure 5.8.7.9 shows the spatial distribution of the effective fishing effort for the unregulated pelagic seine during the period 2003 to 2012. Very sparse patches of effort deployment, predominantly along the French coast off Brest until 2009. Since then a more widely effort spread over the whole VIIe area with even higher concentrations off the French coast at Brest.

Figure 5.8.7.10 shows the spatial distribution of the effective fishing effort for the unregulated pelagic trawls during the period 2003 to 2012. A similar pattern appears apparent of effort deployment for all years over almost the whole VIIe area, with the highest concentrations on the English coast off Brixham.

Figure 5.8.7.11 shows the spatial distribution of the effective fishing effort for the unregulated pots during the period 2003 to 2012. A similar pattern appears apparent of effort deployment for all years, predominantly along the English coast and the French coast off Saint Malo.

Figure 5.8.7.12 shows the spatial distribution of the effective fishing effort for the unregulated trammel nets during the period 2003 to 2012. A similar pattern appears apparent of effort deployment for all years, with the highest concentrations predominantly off the French coast.

Figure 5.8.7.13 shows the spatial distribution of the effective fishing effort for the unregulated gear (“none-none”), gears without mesh size given during the period 2003 to 2012. A similar pattern of effort deployment for all years, predominantly off the French coast with some relatively higher values. For 2011 very high effort was deployed along the French coast and particularly off Brest. STECF notes that these relative high values only represent a very small amount of the total effort deployed in VIIe.

### 5.8.8 ToR 5 Trend in calculated maximum effort of regulated gears and uptake by Member State

Table 5.8.8.1 lists the effort in units of days at sea estimated for the effort regulated and non effort regulated fisheries by Member State. Although, the time series is only considered complete for the three most recent years 2010 to 2012, there is information from English and the Belgian regulated beam trawl fleet (3a) and from English regulated static gear (3b) since 2005.

Unlike the situation in the Baltic, the definitions of few fisheries and specific days at sea allocations to them allow the assessment of the effort uptake from the numbers of boats using effort regulated gears, assuming no major changes in gears used. Multiple counting of vessels (overestimation) is implied from vessels using more than one regulated gear. The maximum numbers of days available for such fisheries, i.e. the maximum days at sea per vessel multiplied with the number of vessels, are given in the Table 5.8.9.1. EWG-13-06 would like to note that the UK has developed a “Days at Sea Scheme” where extra days can be claimed. The EU COM informed EWG-13-06 that in 2011, 42 extra days were requested and

obtained by the UK(English) regulated beam trawl fleet (3a) mounting up to a total days at sea of 206 days for 2011. Therefore the “max-days” in 2011 is not 7216 (164 days x 44 vessels) but 9064 (206 days x 44 vessels) and thus the %-used is not 79% but 63%. In 2013, UK has put forward a new request for 43 extra days. This request is now investigated by the EU.

For the regulated beam trawl fleet (3a), the English series indicate an increasing uptake (47% - 95%) over time whereas the Belgian and the French regulated beam trawl fleet show a stable uptake on a low (around 10%) and high level (around 65%) respectively. The English regulated static gear (3b) show a slight increase (20%-40%) over time whereas the French regulated static gear show a stable uptake around 45%.

Table 5.8.8.1 Western Channel - Trend in days at sea by existing derogations given in Table 1 of Annex IIC (Coun. Reg. 43/2012) and Member State, 2004-2012. Maximum days at sea are calculated from number of vessels multiplied with the maximum days allowed per vessel. Derogations are sorted by gear, special condition (SPECON), and country. Data qualities are summarised in Section 4 of the report. \* = special derogation for UK-3a gear in 2011 obtaining 206 days instead of the basic 164 days.

### *5.8.9 ToR 6 Data quality and any unexpected evolutions of the trends in catches and effort by Member State and fisheries*

STECF EWG 13-06 reiterates its observation that a relatively high percentage of sole are landed by non-effort regulated gears.

### *5.8.10 ToR 7 Correlation between partial cod mortality and fishing effort by Member State and fisheries*

The STECF EWG presents partial fishing mortalities by major fisheries and Member States in relation to the estimated fishing mortality by ICES (2013) and the landings volumes in relation to the estimated total landings for the years available. There is very limited information on discards. The full list of all fisheries can be downloaded from the EWG's web page: <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

Table 5.8.10.1 lists the fishing mortalities anticipated from the management plan as well as those estimated by ICES 2013. It can be concluded from the estimated  $F$  that the stock is sustainably exploited since 2009 ( $F_{msy}=0.27$ ), assuming that discarding is negligible (less than 1%). Since 2009, the estimated partial  $F$ s of the effort regulated gear groups contributed about 60% to the overall fishing mortality. The remainder is then contributed by other gear groups, not regulated by fishing effort and additional unallocated removals considered by ICES. The presented parameters  $r$  (absolute value of Pearson's coefficient of correlation), numbers of points considered, as well as a  $p$  value to quantify the statistical significance ( $\leq 0.05$ ) allow conclusions about the quality of the correlation between the partial  $F$  and fisheries specific fishing effort.

Figure 5.8.10.1 shows the correlation between the partial  $F$ 's and the effort for the main fisheries, using the full time series available (2003-2012). It was noted however that for 2003 and 2004, the DCF data do represent only about 50% of the landings reported to ICES (basis for the partial  $F$ 's) and therefore should not be taken into account in the regression evaluation. As the adjustments to the ICES data in those years were predominantly done for the English beam trawl fleet (3a), catching most of the sole, it is not surprising that these two data years appear as outliers for the English beam trawl fleet (ENG 3a). Therefore STECF-EWG decided to exclude the first two years of data for the partial  $F$  analysis. Figure 5.8.10.2 shows the correlation between the partial  $F$ 's and the effort for the main fisheries for the shorter time series 2005-2012, whereas Figure 5.8.10.3 shows the time series of the partial  $F$ 's over the same period.

STECF EWG 13-06 notes that the correlations between the summed partial  $F$ s for landings of the major fisheries and their estimated fishing efforts are significant for the period 2005-2012 (Table 5.8.10.1). The partial  $F$ s of Belgian and English fisheries using the regulated gear 3a, accounting for about 50% of the landings, are closely correlated with their specific effort estimates in  $kW \cdot \text{days}$  at sea. Also the unregulated French otter trawl fleet, taking about 17% of the sole landings, has a significant correlation between partial  $F$  and  $kW \cdot \text{days}$  at sea. However for the French regulated beam trawl fisheries (3a), which represent just about 5% of the sole landings, the correlation between  $F$  and effort ( $kW \cdot \text{days}$ ) is statistically not significant. The regulated static gear (3b) show a negative regression for the English fleet and a rather high  $p$ -value for the French fleet. This indicates that effective fisheries management for sole in ICES Division VIIe by fishing effort in units of  $kW \cdot \text{days}$  at sea appears possible, also an auxiliary measure to catch constraints and technical measures.

STECF EWG 13-06 notes that if a fishing effort regime in the Western Channel is to be maintained, it shall consider an appropriate measure of effective unit of fishing effort to account for vessel size/power and gear effectiveness.

Table 5.8.10.1 Western Channel sole. The left part of the table lists estimated F trajectories from the management plan and the ICES 2013 sole assessment, as well as partial Fs for landings of fisheries using regulated gears. The right part of the table lists the respective trends in fishing effort (kW\*days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock.

### 5.8.11 New ToR to facilitate STECF's management plan evaluation

#### 5.8.11.1 Relationship between fishing mortality or biomass with fishing effort, taking into account partial fishing mortality between fleet segments (including non-regulated)

STECF EWG 13-06 notes that the previous section 5.8.10 elaborates on relationship between the partial fishing mortalities and the effort in kW\*days by major fisheries and Member States in relation to the estimated fishing mortality by ICES (2013) for regulated and non-regulated gears.

#### 5.8.11.2 Comparison of different effort units (in particular differences between days-at-sea and kW\*days)

Section 5.8.10 elaborates on relationship between the partial fishing mortalities and the effort in kW\*days by major fisheries and Member States in relation to the estimated fishing mortality by ICES (2013) for regulated and non-regulated gears.

As explained in section 5.8.10, the 2002 and 2003 data was also excluded from this analysis.

Where time series of days at sea were available for more than 5 years, comparison plots were made for regulated and non-regulated gears by Member States; investigating the relationship between:

- 1) The partial fishing mortality and the effort in days at sea (left panels)
- 2) The partial fishing mortality and the effort in kW days at sea (right panels)

Unfortunately all French gear groups were excluded from this comparison as only 3 years of days at sea were available at this EWG-13-06.

Figure 5.8.11.2.1 show the linear trends of the available regulated gears from Belgium (3a) and England (3a and 3b). For the regulated beam trawl gear (3a) there is a slightly better fit of the data points if kW\*days is used than when days at sea is used. For English the regulated static gear (3b) the relationship is negative in both cases.

Figures 5.8.11.2.2a-b shows the linear trends of the available unregulated gears from England. For the unregulated beam trawl gear and the dredges there is also a slightly better fit of the data points if kW\*days is used than when days at sea is used. For the other unregulated gears there is a poor fit or a negative trend between the partial fishing and both effort units.

STECF EWG 13-06 notes that the regulated and non regulated beam trawl gear, responsible for the majority of the sole catches, show a slightly better regression to the partial fishing mortality if kW\*days is used than when days at sea is used. Therefore a kW\*days regulation may seem more appropriate.

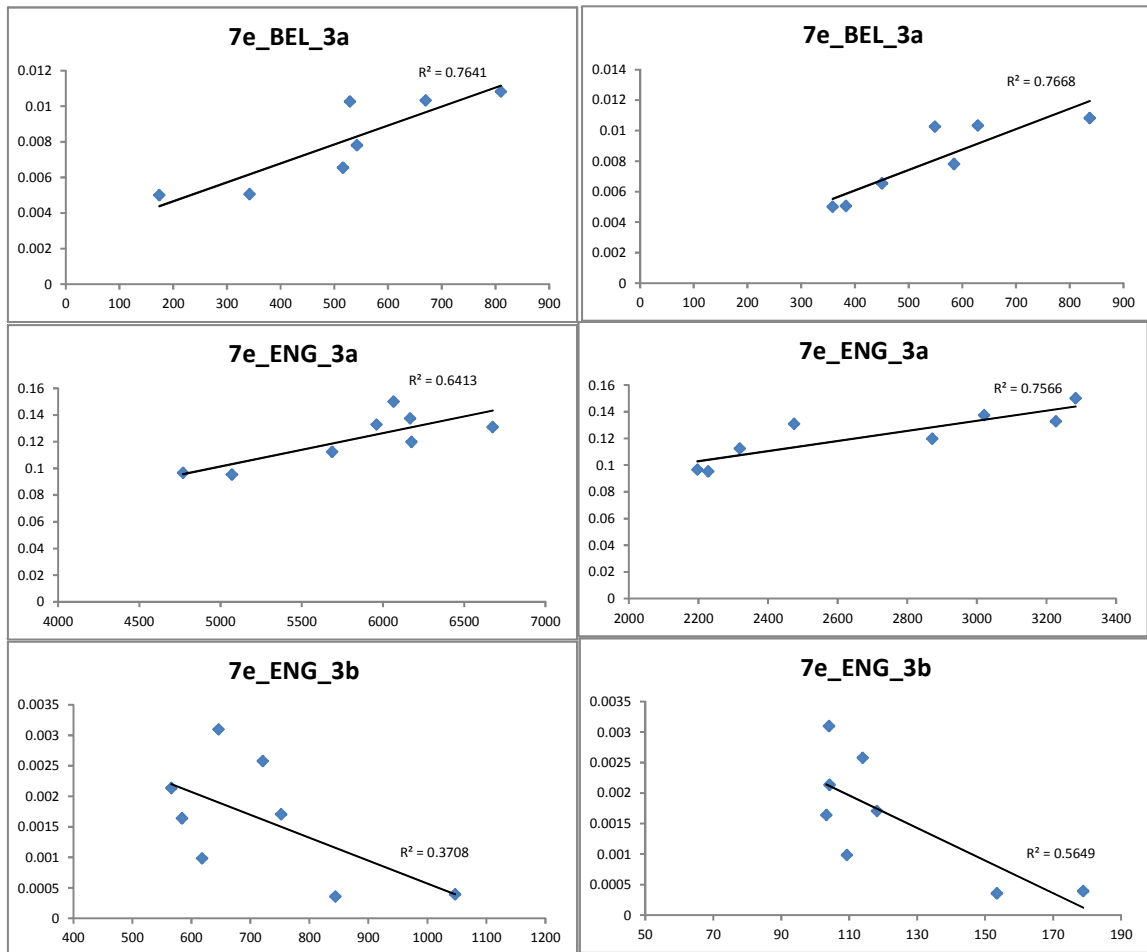

Fig. 5.8.11.2.1a Western Channel sole. Partial fishing mortality (based on harvest rate estimates) over effort (days at sea- left panels) and (kW days at sea – right panels, units in thousands) of major regulated fisheries, 2005-2012.

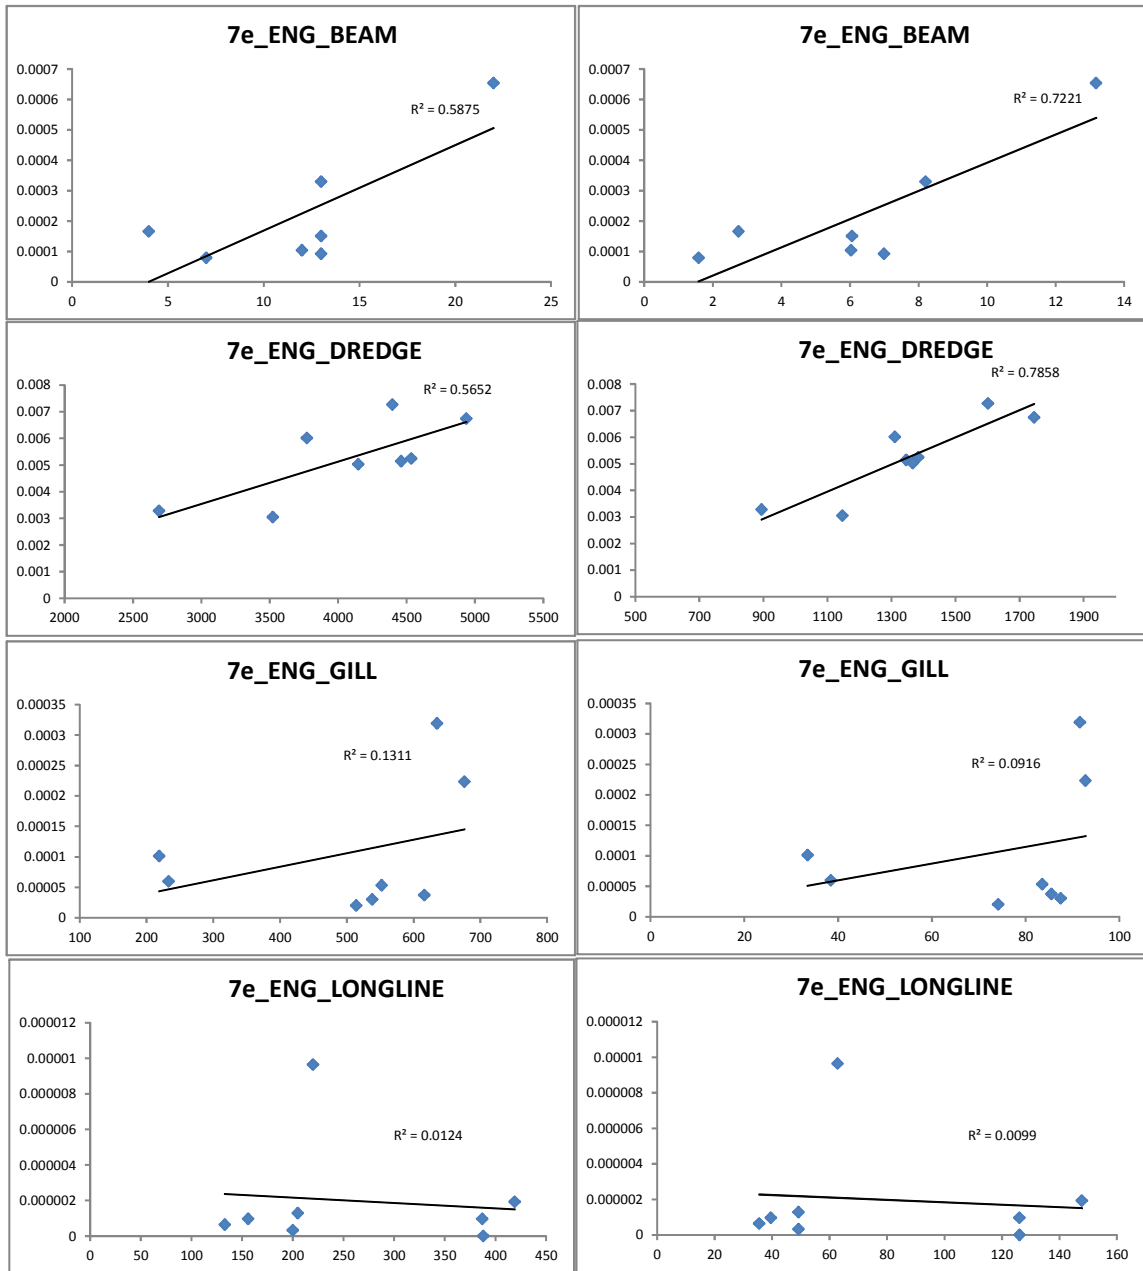

Fig. 5.8.11.2.2a Western Channel sole. Partial fishing mortality (based on harvest rate estimates) over effort (days at sea - left panels) and (kW days at sea – right panels in units of thousands) of major unregulated fisheries, 2005-2012.

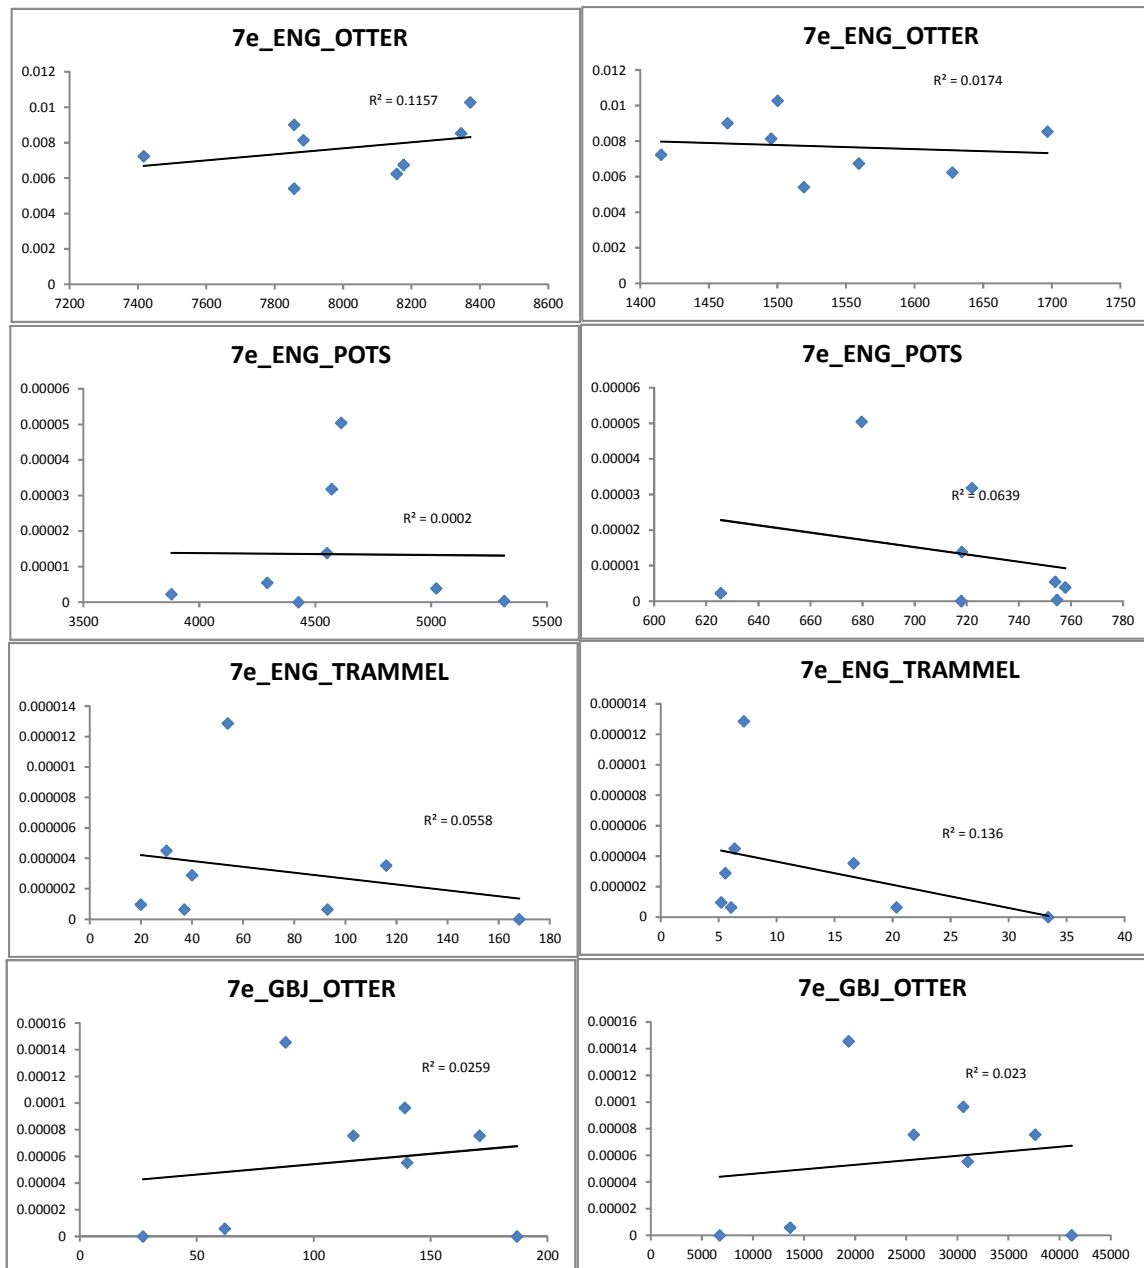

Fig. 5.8.11.2.2b Western Channel sole. Partial fishing mortality (based on harvest rate estimates) over effort (days at sea- left panels) and (kW days at sea – right panels in units of thousands) of major unregulated fisheries, 2005-2012.

### 5.8.11.3 Recent changes in management

STECF EWG 13-06 presents spatio-temporal patterns in effective fishing effort by rectangle and regulated gears in section 5.8.7 of the present report.

STECF EWG 13-06 notes that the UK has developed a “Days at Sea Scheme” for Western Channel for which extra days at sea can be claimed for the regulated gears in the sole VIIe management plan. The EU informed EWG-13-06 that in 2011, 42 extra days were requested and obtained by the UK regulated beam trawl fleet (3a) mounting up to total days at sea of 206 days for 2011 instead of the basic 164 days. In 2013, the UK has put forward a new request for 43 extra days. This request was still under investigation by the EU COM at the time of the STECF-EWG-13-06 meeting in June 2013.

## 5.9 Deep Sea and Western Waters effort regime evaluations

Details of the Deep Sea Regulations can be found in COUNCIL REGULATION (EC) No 2347/2002.

The format for presenting Deep Sea information was discussed during the July 2009 SGMOS meeting when experts with particular knowledge were present. It was agreed that the most useful presentation would be data summarised on a regional approach so as to identify geographic differences in effort distribution by key member states and important gears. It was decided that regions would be based on ICES areas. It may be the case that similarities between some of these areas would allow areas to be combined in future summaries. Where an ICES area contained waters within EU jurisdiction and waters outside of this, separate summaries are provided where data allow.

In this section of the report tables showing effort by gear groups (regulated and unregulated), area and nation are only summaries. The full tables are available on the JRC website:

<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

It should be noted that Spain has not provided data for 2010 and 2011.

Details of the Western Waters regulations and its geographical extent can be found in the regulation COUNCIL REGULATION (EC) No 1415/2004.

The EWG experienced extreme difficulties in preparing these data and the interpretation of them is confounded by uncertainty in the western waters data summaries for some member states most notably Portugal, France and Spain. **SINCE THESE COUNTRIES OPERATE EXTENSIVELY IN THE WESTERN WATERS AREAS AND ARE LIKELY TO CONTRIBUTE A SIGNIFICANT PROPORTION TO THE OVERALL EFFORT COVERED BY THIS REGULATION, THE DATA SHORTFALL IMPLIES THAT OVERALL EFFORT FIGURES REMAIN UNRELIABLE.**

The EWG database records effort in the areas covered by the Western waters regulation including effort which becomes categorised as ‘deep sea’. Since these two regulations are legislated to be non-overlapping, columns are included to show the western waters effort without the deep sea.

Table 5.9.1. COUNCIL REGULATION (EC) No 2347/2002 Annex I and 2 species list:

| Code | Annex | Scientific name                   | Common name                   |
|------|-------|-----------------------------------|-------------------------------|

DEEP SEA

### 5.9.1 ToR 1a Fishing effort by area

#### DEEP SEA

Effort within the Deep sea and Western waters has been compiled for kW\*days-at-sea, GT\*days-at-sea, and numbers of vessels. Within the report the focus is on kW\*Days at sea. Information on GT\*days at sea and numbers of vessels is available via the website: [Http://stecf.jrc.ec.europa.eu/web/stecf/ewg06](http://stecf.jrc.ec.europa.eu/web/stecf/ewg06)

Overview of spatial distribution of fishing effort data: Collation of data to address questions associated with deepwater fisheries provided an opportunity to present spatial data across wide geographic areas giving a general picture of the distribution of fishing activity.

For each ICES Sub-area, tables are included which show effort by country (and an overall effort for the area) and effort by gear. In addition, figures illustrating trends are included for the most important gears.

Figures 5.9.1.1 to 5.9.1.5 show respectively the distribution of effort for five of the categories of gear; bottom trawl, pelagic trawl, longline, gill nets and beam trawl specified in the Terms of Reference.

Bottom trawl effort is concentrated in ICES Area IVa as well as the Continental shelf and slope to the west and southwest of Ireland and the UK. Bottom trawl effort in the Bay of Biscay, the Cantabrian Sea and off the Portuguese coast increased in 2012 compared to 2010 and 2011.

Pelagic trawling was concentrated to the west of Ireland, and to the west and north of Scotland in the mid 2000s. This effort decreased greatly between 2007 and 2009, increased again in 2010, but has reduced again in 2011 and 2012.

Longline effort was concentrated on the shelf and slope between Shetland and Portugal but has been in decline in recent years. Longline effort from the Azores has shown an increase since 2009.

In the mid 2000s gill net effort was concentrated in the Celtic sea and Porcupine Bank. Due to current restrictions in the use of deepwater gill nets much of this effort is now concentrated in the Celtic sea, with some effort in the North sea, west of Scotland and the Bay of Biscay.

Beam trawling is concentrated in the Celtic sea and the western English Channel. While beam trawls are not a deepwater gear some of the species caught are classified under Annex 2.

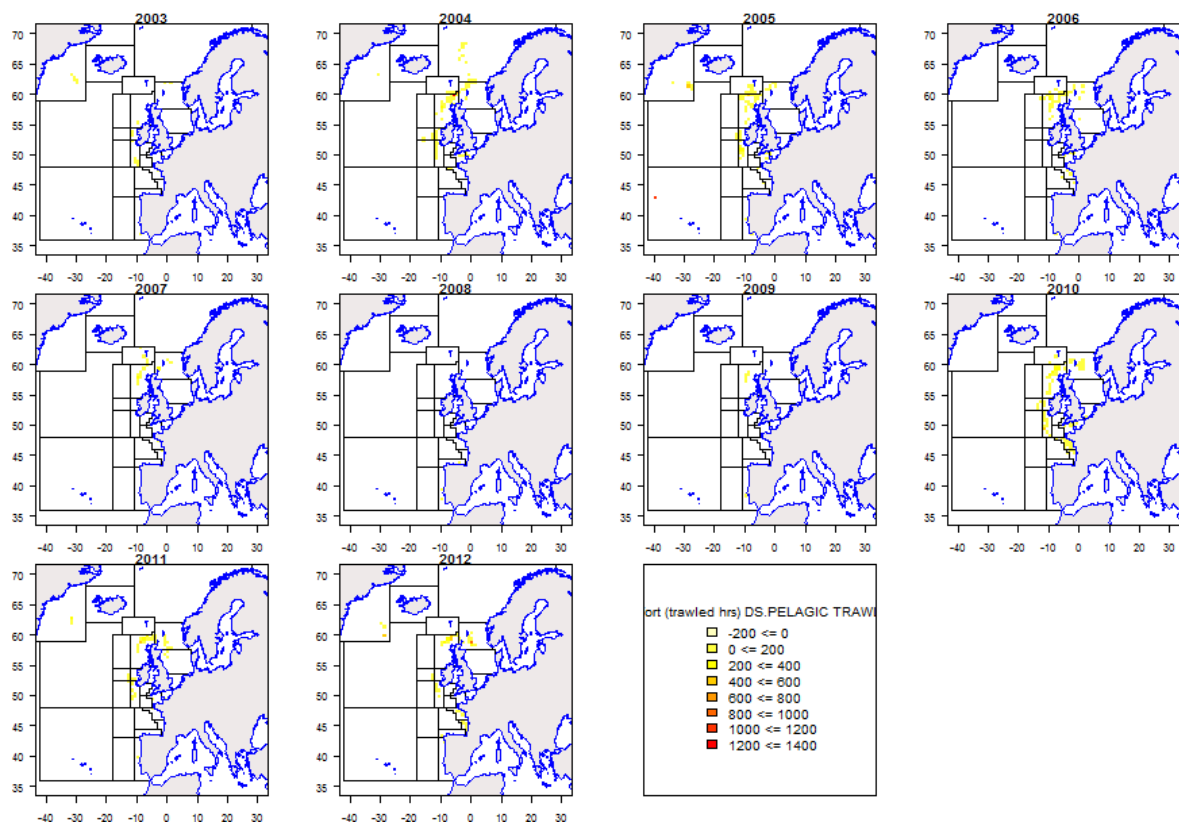

Figure 5.9.1.1 Distribution of pelagic trawl effort, 2003 – 2012.

Figure 5.9.1.2 Distribution of bottom trawl effort, 2003 – 2012.

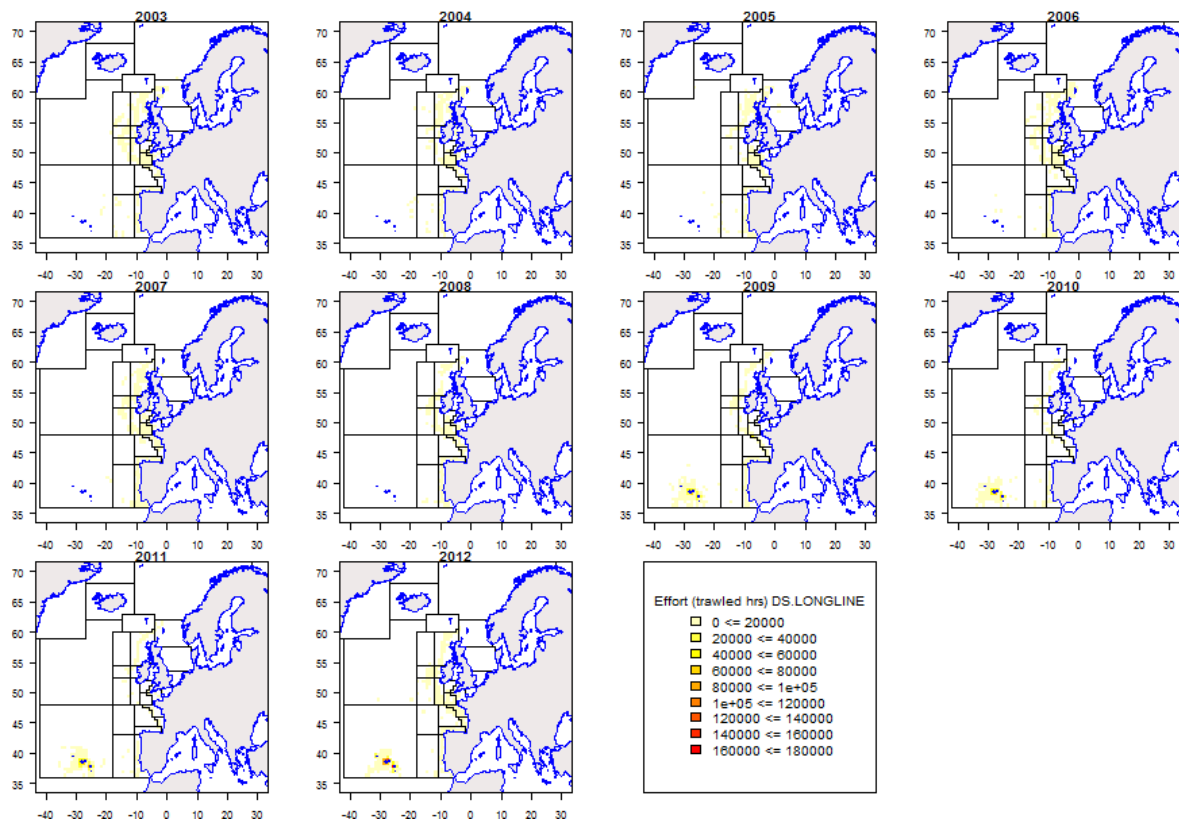

Figure 5.9.1.3 Distribution of longline effort, 2003 - 2012

Figure 5.9.1.4 Distribution of gill net effort, 2003 – 2012.

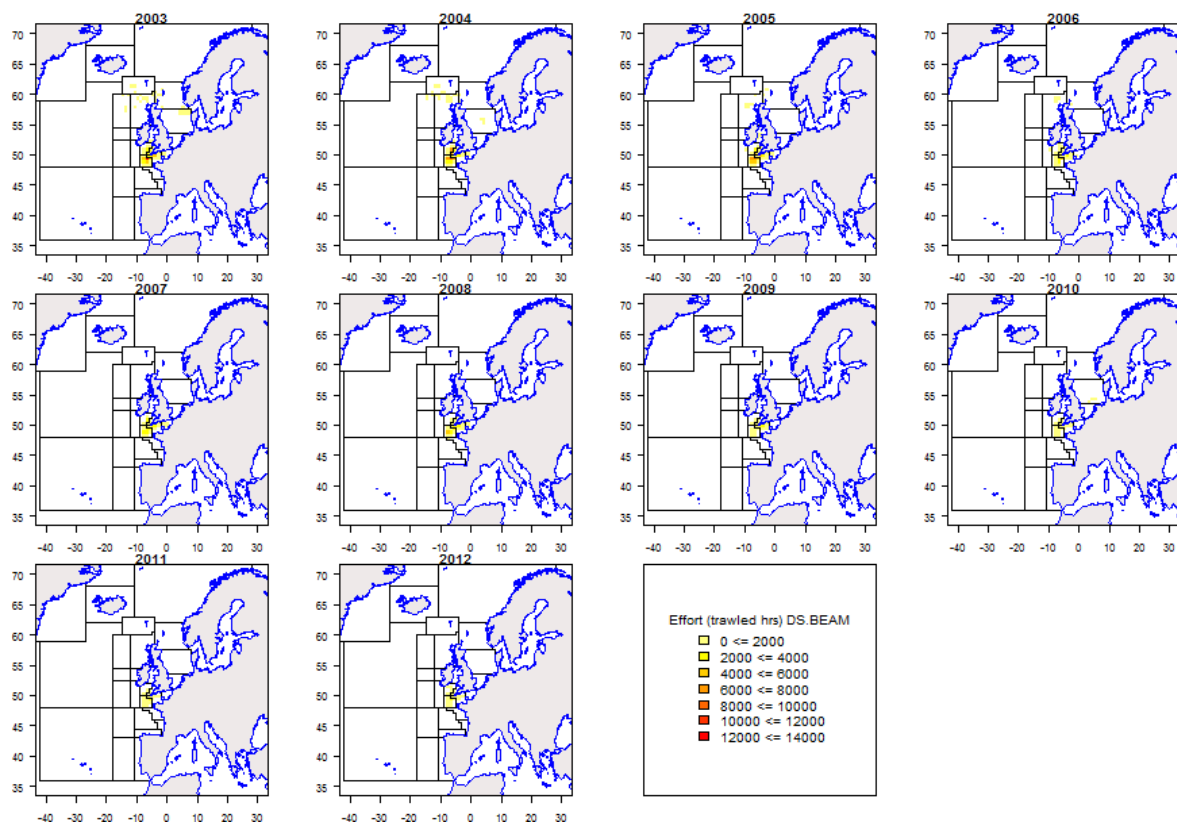

Figure 5.9.1.5 Distribution of beam trawl effort, 2003 – 2012.

## WESTERN WATERS

Effort data under the Western Waters regulation is presented by a number of EU and non-EU areas. Where relevant these encompass breakdowns by country, gear and vessel length groups.

### 5.9.1.1 Fishing effort in ICES area I by fisheries and Member States only linked to Deep Sea species

#### Area I non-EU

Only sparse effort by Germany was reported previously from this area (Tables 5.9.1.1.1, 5.9.1.1.2 and Figure 5.9.1.1.1). However France reported some effort in 2012. None of this is in EU waters.

### 5.9.1.2 Fishing effort in ICES area II by fisheries and Member States only linked to Deep Sea species

#### Area II EU

Five countries reported effort in this area with the majority being carried out by two countries, France and UK, with the pattern of each varying through time (Table 5.9.1.2.1). French effort showed a particularly noticeable drop in the mid 2000s, before increasing again from 2006. French effort has dropped sharply in 2011 and 2012. UK effort has fluctuated throughout the time series and mainly comprises bottom trawl, with some gill net effort. Netherlands pelagic trawl effort stopped in 2007 (Table 5.9.1.2.2). Germany contributed some effort in the mid 2000s. Effort in Sub-area II (EU) shows no obvious trend.

The principal gear used in this Sub-area (Table 5.9.1.2.2, and Figure 5.9.1.2.1) was the otter trawl (by France and UK). UK gill net effort fluctuated between 2002 and 2010 (albeit at a relatively low level), but had ceased since 2010.

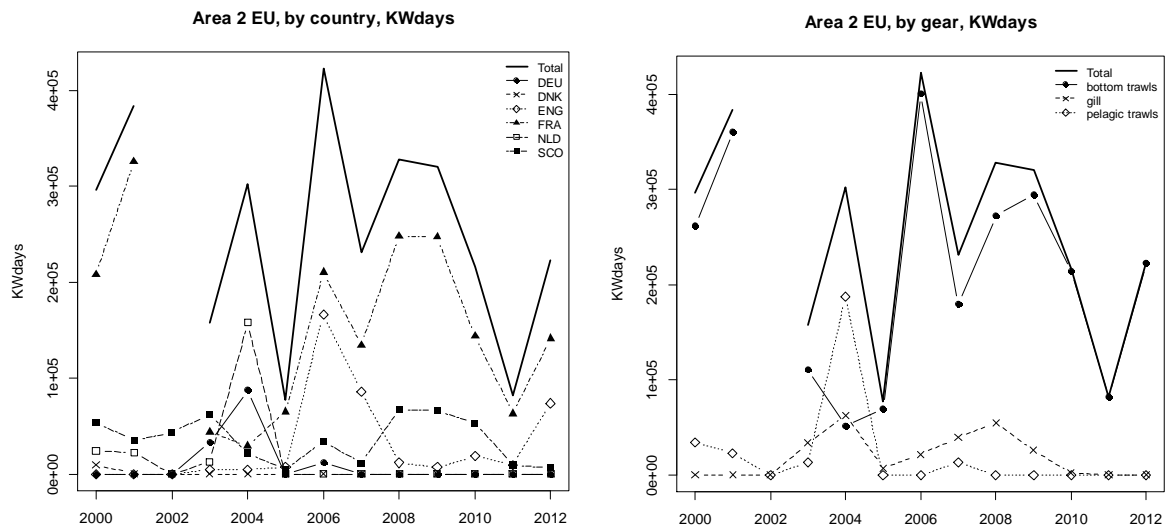

Figure 5.9.1.2.1.- Deep Sea Effort (kW\*days) 2000-2012 by member state and by gear ICES Area II EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### Area II non-EU

Seven countries reported effort in this area with the majority being carried out by the UK (Table 5.9.1.2.3). Total effort has decreased since the mid 2000s. UK bottom trawl effort has been in decline since 2008, however effort by France, which started in 2010, is increasing. Netherlands pelagic trawl effort stopped in 2006 (Table 5.9.1.2.4). Germany contributed some effort in the mid 2000s. Effort in Sub-area II (non EU) has been decreasing since 2004.

The principal gear used in this Sub-area (Table 5.9.1.2.4, and Figures 5.9.1.2.2.) was the otter trawl (by UK and France). Netherland pelagic trawl effort reached a peak in 2004 but has ceased since 2007.

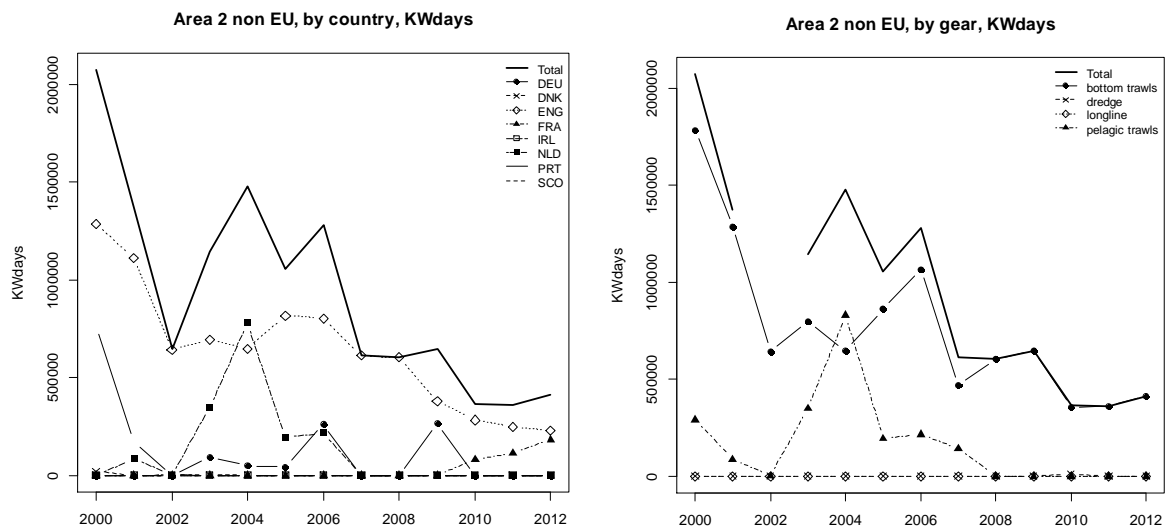

Figure 5.9.1.2.2. Deep Sea Effort (kwdays) 2000-2012 by member state and by gear ICES Area II non EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### 5.9.1.3 Fishing effort in ICES area III by fisheries and Member States only linked to Deep Sea species

#### Area III no Baltic

All effort takes place in EU waters but is very limited and the majority of the records are for Danish vessels using bottom trawls. German data was reported for 2004 only and France reported a small amount of effort in 2012.

#### 5.9.1.4 Fishing effort in ICES area IV by fisheries and Member States only linked to Deep Sea species

All reported effort in this ICES area occurs in EU waters. Six countries have reported effort in this area with four countries, France, Netherlands, Denmark and UK contributing the most (Tables 5.9.1.4.1 and 5.9.1.4.2). There is an obvious downward trend in overall effort up to 2008, with the 2008 figure only about 25% of the figure in 2000, but effort increased again in 2009 and seems to have stabilised in 2010 and 2011, before increasing again in 2012. French and UK effort showed marked declines up to 2002, after which French effort was reasonably constant before increasing in 2012. UK effort has stayed reasonably stable. While Dutch effort peaked in the mid 2000s significant longlining was again carried out in the last three years. Germany has also contributed sporadic effort.

Denmark submitted a revision of historical effort in 2012, which led to a major increase in their previously reported for the area. Apart from 2000 the effort was quite stable up to 2007, when it began to decrease. After reporting no effort in 2011 it has reported a large amount of effort for 2012. All this effort was recorded for bottom trawls.

Otter trawl was by far the most important gear used, by France, Denmark and the UK. UK gill net effort was stable up to 2006 after which it fluctuated somewhat. The reported 2012 UK effort is only 20% of that recorded in 2011 The UK also used beam trawl but have not reported effort since 2005. The UK also reports small amounts of longline effort. Netherlands pelagic effort which peaked in 2003 has begun increasing again in the last two years.

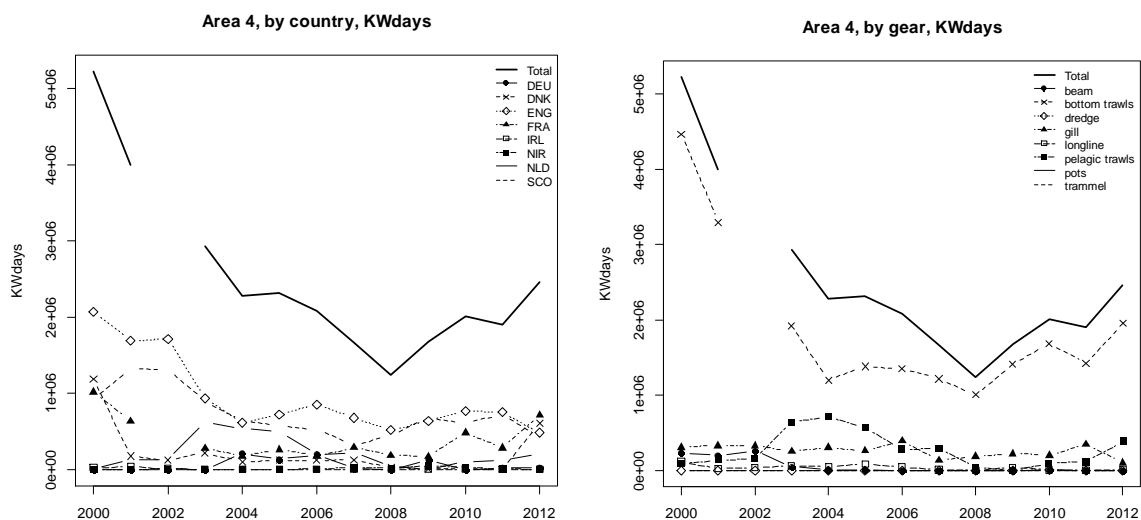

Figure 5.9.1.4.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by member state and by gear, in ICES Sub-area IV EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### 5.9.1.5 Fishing effort in ICES area V

#### Deepwater V EU

Four countries, France, Netherlands and UK and Germany contributed effort in this area, with Ireland reporting effort only in 2001 (Tables 5.9.1.5.1 and 5.9.1.5.2 and Figure 5.9.1.5.1). In the EU portion, French effort has dominated throughout the series and remained high up to 2009, however this effort had dropped by 90% by 2011 with a small increase again in 2012. UK effort showed a marked decline since 2004 and is now at quite a low level.

The predominant gear used was otter trawl, by France and the UK, but this effort has decreased in recent years. Gill net effort by France ceased in 2009 and by the UK in 2006. Netherlands pelagic trawl effort

has decreased during the time period and has recorded effort only once, 2010, in the last four years. German effort in the middle part of the time series was both gill nets and pelagic trawls.

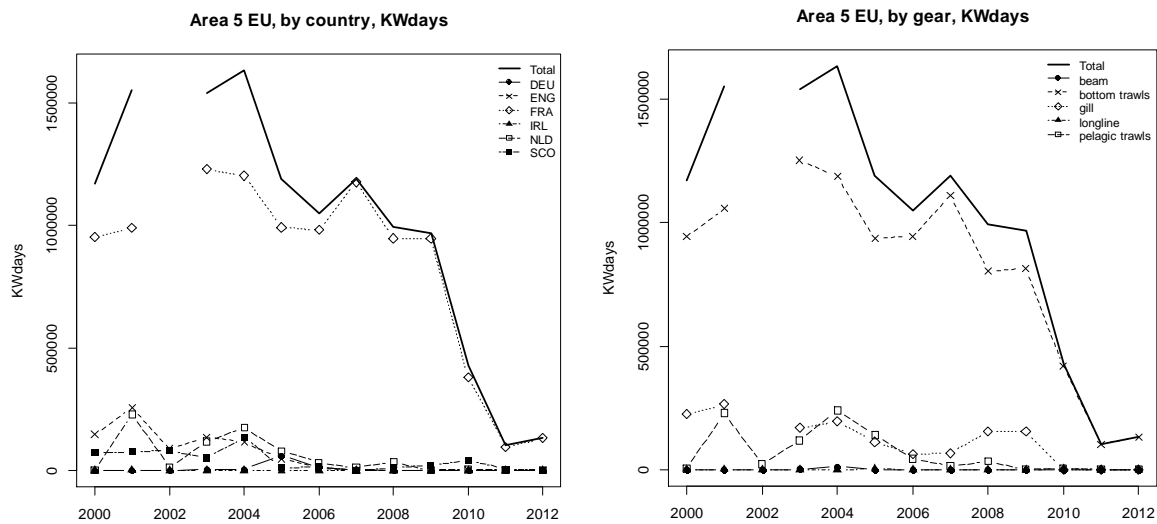

Figure 5.9.1.5.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by member state and by gear, in ICES Sub-area V EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### **Western Waters V EU**

There is uncertainty relating to French effort, values in 2002 are extremely high. Overall effort figures are therefore unreliable.

Effort within this area has declined over time, and the pace of decline had quickened in the last number of years. In 2012 effort increased slightly but is only approximately 15% of that recorded for 2009. Historically bottom trawls, gill nets and pelagic trawl by France, the UK and the Netherlands accounted for the majority of the effort. Since 2009 pelagic trawl and gill nets have almost ceased, and in 2012 bottom trawl effort was confined to France, (Table 5.9.1.5.3. and Figure 5.9.1.5.2).

Table 5.9.1.5.3.- Effort (kW\*days) by country, gear and vessel size group within ICES Sub-area V EU, 2000-2012.

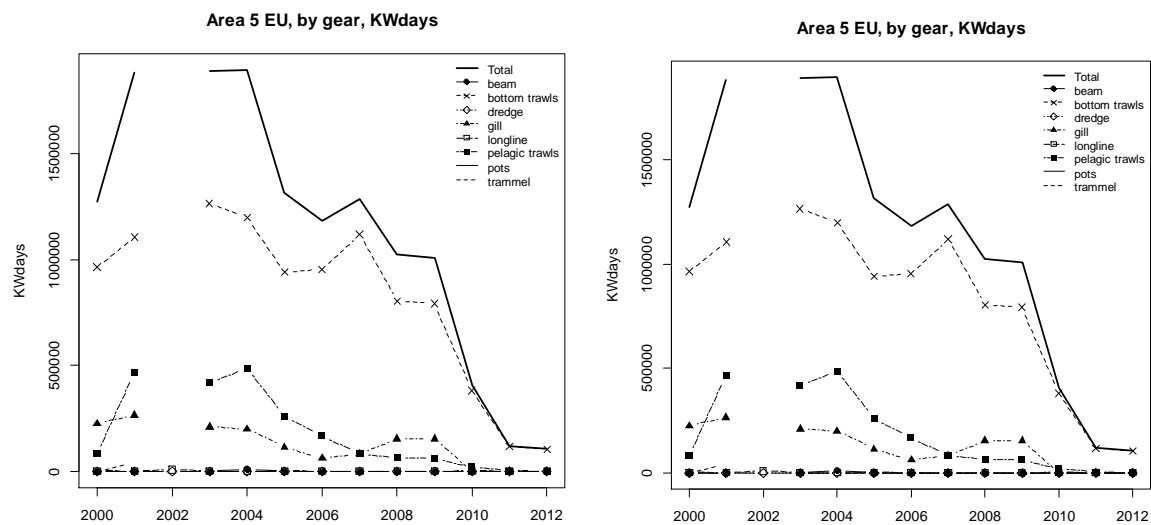

Figure 5.9.1.5.2.- Effort (kW\*days) reported within ICES Sub-area V EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort.

### Deepwater V non-EU

In this area bottom trawl effort of both France and the UK peaked in 2004 and has dropped slowly since. The UK reported no effort since 2010 and France has not recorded effort for 2012. German effort dropped from the mid 2000s before bottom trawl effort began rising in 2009. This effort has continued to 2012. Germany and the Netherlands recorded pelagic trawl effort up to 2007, but this has since stopped, bar 2010 effort recorded for the Netherlands.

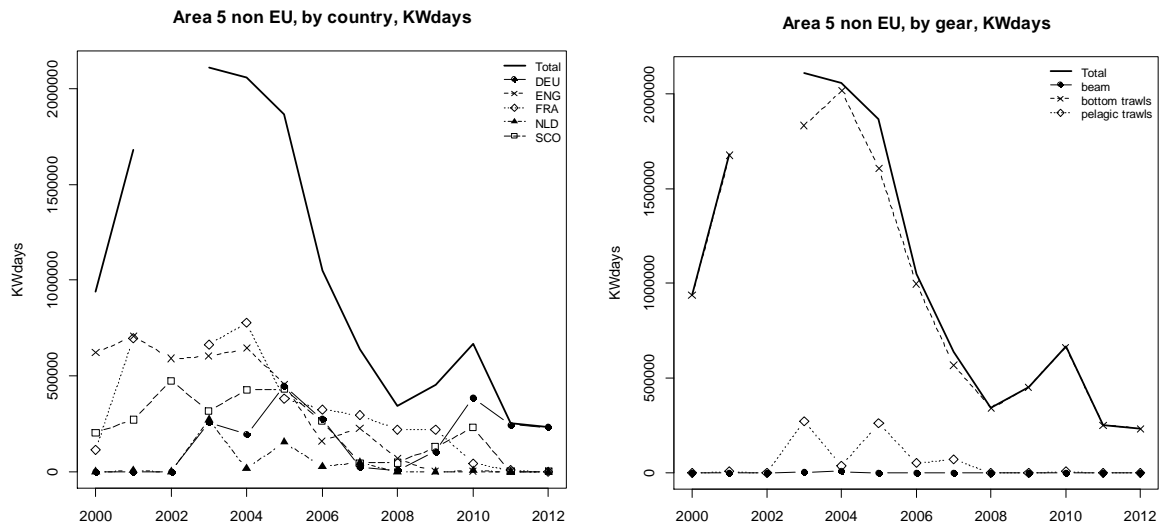

Figure 5.9.1.5.3. Deep Sea fishing effort (kW\*days), 2000 – 2012, by member state and by gear, in ICES Sub-area V non-EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### Western Waters V non-EU

There is uncertainty relating to French effort, values in 2002 are extremely high. Overall effort figures are unreliable.

Overall effort within this area has declined over time, having previously been fished by a number of nations utilising bottom and pelagic trawls (Table 5.9.1.5.6. and Figure 5.9.1.5.4).

The majority of fishing effort within the area is directed toward fisheries not covered by the western waters regulation. Fishing was principally carried out by Germany, the Netherlands, and the UK. Bottom trawling is the primary gear within the area, much of which targets deepwater fisheries. Bottom trawl effort for 2012 has only been reported by Germany.

Pelagic trawl effort, conducted mainly by Scotland and the Netherlands, fluctuated between 2003 and 2005, at which stage effort started declining. Pelagic effort ceased in 2010.

Table 5.9.1.5.6.- Effort (kW\*days) by country, gear and vessel size group within ICES Sub-area V non EU, 2000-2012.

| Area           | Gear           | Country | Vessel length | 2000    |             |                       | 2001    |             |                       | 2002    |             |                       | 2003    |             |                       | 2004    |             |                       | 2005    |             |                       |

### 5.9.1.6 Fishing effort in ICES area VI

#### Deepwater VI EU

Several countries, France, Netherlands, Ireland, UK and Germany fished in this area (Tables 5.9.1.6.1 and 5.9.1.6.2 and Figure 5.9.1.6.1). In this area French and UK effort dominated throughout the series. French effort peaked in 2001 but and between 2007 and 2010 had stabilised at about 40% of earlier values. This effort has dropped again in 2011 and 2012. UK effort also peaked in 2001 and has also stabilised in the last four years, but at a much lower level than French effort. Bottom trawl was the predominant gear used in area VI.

In the EU portion of Area VI bottom trawl effort was followed in importance by pelagic trawling and gill nets, although total effort has been in decline since 2002.

In addition to otter trawl, UK effort comprises all the other gear types. UK gill net activity had declined up to 2010 but showed an increase again in 2011. However in 2012 effort dropped to an insignificant amount. UK longline effort, which had declined between 2008 and 2010, has begun to increase again in the last two years.

Irish effort is primarily for bottom trawl, with some effort recorded for pelagic trawl between 2000 and 2004. Effort decreased after 2005 and has fluctuated since.

Dutch effort, which consisted entirely of pelagic trawls, fluctuated during the early 2000s. This stabilised between 2006 and 2010 even though no effort was recorded in 2009. However in the last two years effort has begun decreasing again. German effort was concentrated between 2003 and 2007, with gill nets and

pelagic trawls being used. In 2010 German effort was recorded for gill nets and in 2012 was recorded for pelagic trawls.

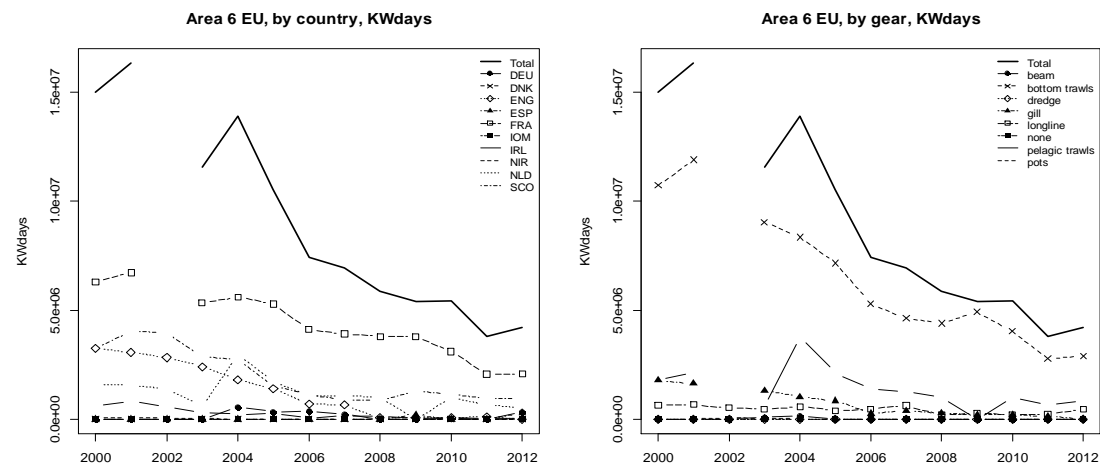

Figure 5.9.1.6.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area VI EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

## **Western Waters VI EU**

There is uncertainty relating to French effort, values in 2002 are extremely high. Overall effort figures are unreliable. There has been a gradual decline in effort within Area VI EU over the period (Table 5.9.1.6.3. and Figure 5.9.1.6.2.)

The influence of deepwater fisheries in Area VI EU is less than in Area V, here the majority of annual effort is directed to non-deepwater fisheries. A variety of nations operate within this area.

Bottom trawling and pelagic trawling are the primary gear categories within this area, along with smaller amounts of pots and gill nets.

Bottom trawling effort has declined throughout the time series. Effort from 2006 to 2008 was stable before dropping in 2009 by roughly 50%. It stabilised here again for three years before declining once more in 2012. Scotland continues to dominate bottom trawl effort, with large contributions from France (directed toward deepwater fisheries), and to a lesser extent Ireland.

Pelagic trawl effort peaked in 2004 and has shown a steady decline since. There was a small increase in effort in 2011, but this has dropped in 2012 and is back at 2010 levels. Historically pelagic effort was dominated by the Netherlands, with major additional effort from Scotland and Ireland. Netherlands effort has been in decline in the last number of years. In 2012 Ireland recorded the most effort in this sector.

A number of other gear categories are reported from this area, occurring at comparatively low levels. This includes pot, dredging, longlines and gillnets. Of these, pots have the highest effort. Much of this effort originates from Scottish vessels, although Irish, English and Northern Irish vessels also utilise this gear. Gillnetting previously showed higher levels of effort, the majority of which was associated with deepwater fisheries, which have subsequently declined since 2006 to low levels. Scotland, France and Germany carry out demersal gillnetting at lower levels.

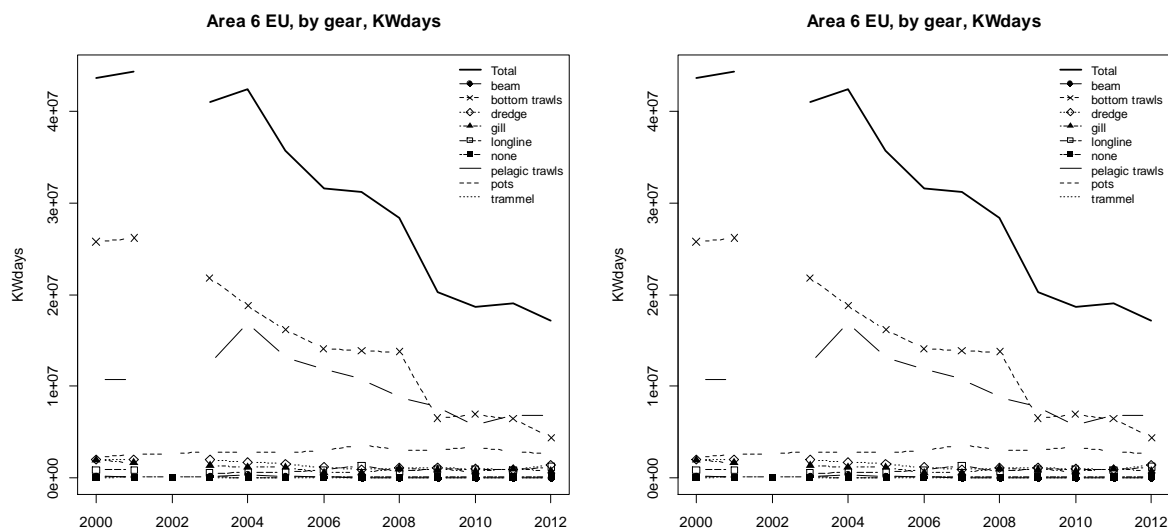

Figure 5.9.1.6.2.- Effort (kW\*days) reported within ICES Sub-area VI EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort.

### Deepwater VI non-EU

The effort in Area VI non-EU has been dominated by the UK, however this effort has dropped by more than 99% since its peak in 2004. In 2012 Spain recorded effort in this area for the first time. This Spanish effort was for bottom trawls.

In the non EU portion of Area VI effort was dominated by UK otter trawling. Effort peaked in 2004 and has been in decline since, with the 2012 figure being the smallest of the time series, (Tables 5.9.1.6.4, 5.9.1.6.5 and Figure 5.9.1.6.3). Bottom trawl was the most important method, with some gill net effort being reported up to 2001 by Portugal and 2007 by the UK. Netherlands carried out pelagic trawls for a couple of years in the mid 2000s.

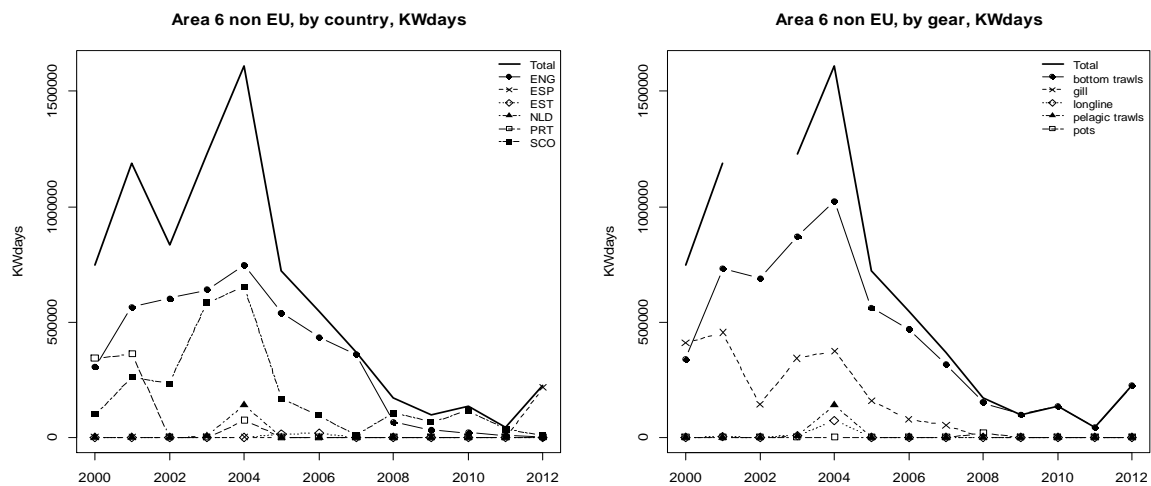

Figure 5.9.1.6.3. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area VI non-EU.

### Western Waters VI non-EU

Effort has been declining within this area over time, having peaked in 2004. Effort has increased slightly in 2009 and 2010, but decreased again this year (Table 5.9.1.6.6. and Figure 5.9.1.6.4.).

Bottom trawling is the primary activity, carried out by English and Scottish vessels. Much of the effort had been directed towards deepwater fisheries. Scottish effort, which had increased to to 2010, has begun to decline again. In 2012 England, whose effort had been in decline since 2004, didn't report any bottom trawl effort, however, Spain recorded a large amount of effort.

At the beginning of the time series, gillnetting also occurred, carried out by England, Scotland and Portugal, and much of this effort was directed toward deepwater fisheries. Since 2006 effort within this category has been minimal.

A period of pelagic trawling which occurred between 2003 and 2005 has ceased. Effort by Germany using pots from 2010 to 2012 seems to be directed at deep-water red crab.

Table 5.9.1.6.6.- Effort (kW\*days) by country, gear and vessel size group within ICES Sub-area VI non-EU, 2000-2012.

| Area           | Gear           | Country | Vessel length | 2000   |             |                       | 2001    |             |                       | 2002    |             |                       | 2003    |             |                       | 2004    |             |                       | 2005   |             |                       |

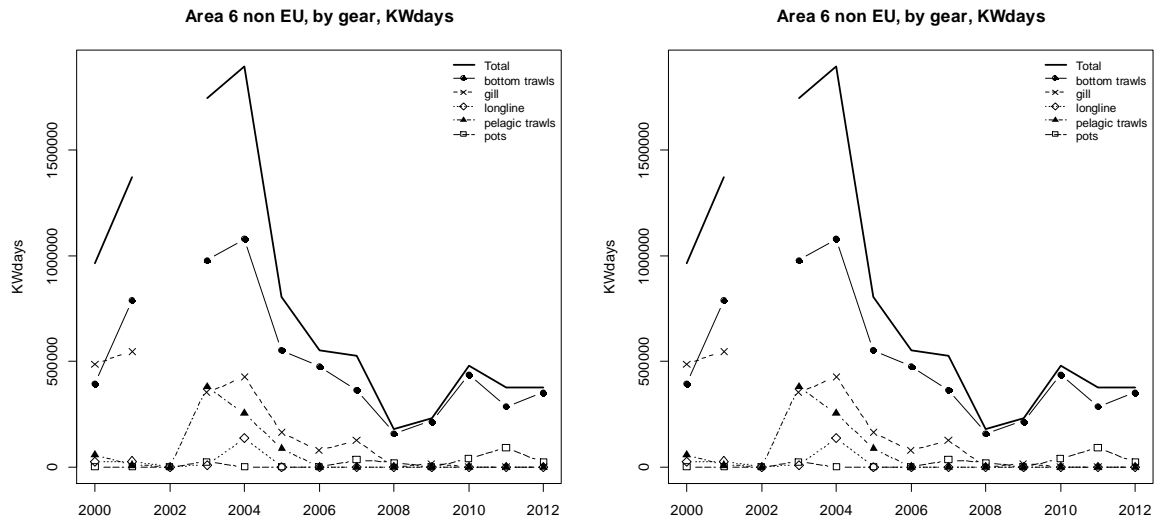

Figure 5.9.1.6.4.- Effort (kW\*days) reported within ICES Sub-area VI non-EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort.

### 5.9.1.7 Fishing effort in ICES area VII excluding VIId

#### Deepwater VII EU no VIId

Six countries supplied data indicating activity in this area (Tables 5.9.1.7.1, 5.9.1.7.2 and Figure 5.9.1.7.1), from 2003 to 2007 by Germany, and 2009 and 2012 from Spain. UK, France and Ireland were the main countries with the Netherlands also reporting pelagic trawl effort in this area throughout the time series

This area has been broken up into Area VII (EU no VIId), EU VIId, and non EU. EU VIId is the eastern English channel and is often associated with the North Sea as much as the English Channel.

With the exception of France where effort has declined by just over 50% in the time period, effort of all other nations has dropped dramatically. For the UK effort has dropped from over 10 million KWdays to just over 2.3 million, and for Ireland it is even more striking, down from 1.6 million KWdays to just under 190,000 KWdays. Overall, effort in 2011 was just under 50% of the reported value in 2000.

The main effort in this area is recorded for the UK bottom trawl effort, followed by France and Ireland. In 2012 however Spain recorded extensive bottom trawl effort, similar to that recorded by the UK in the middle part of the time series. Gill net effort in France and the UK has been declining since reaching a peak in 2004. Between 2006 and 2008 the UK longline effort was nearly as important as gill nets, but this effort decreased quickly up to 2011, before showing an increase again in 2012. Spain also reported considerable longline effort for 2012. The UK reported effort by beam trawls and trammel nets but both have been in decline recently, although there was an increase in trammel net activity in 2012.

In general the declines in effort reported above are evident in most gears. The Netherlands has been responsible for most of the pelagic trawling. This effort fluctuated between 2000 and 2005, and became intermittent at low levels after that. The Netherlands reported quite high effort again for 2010 but this has decreased again in 2011 and 2012.

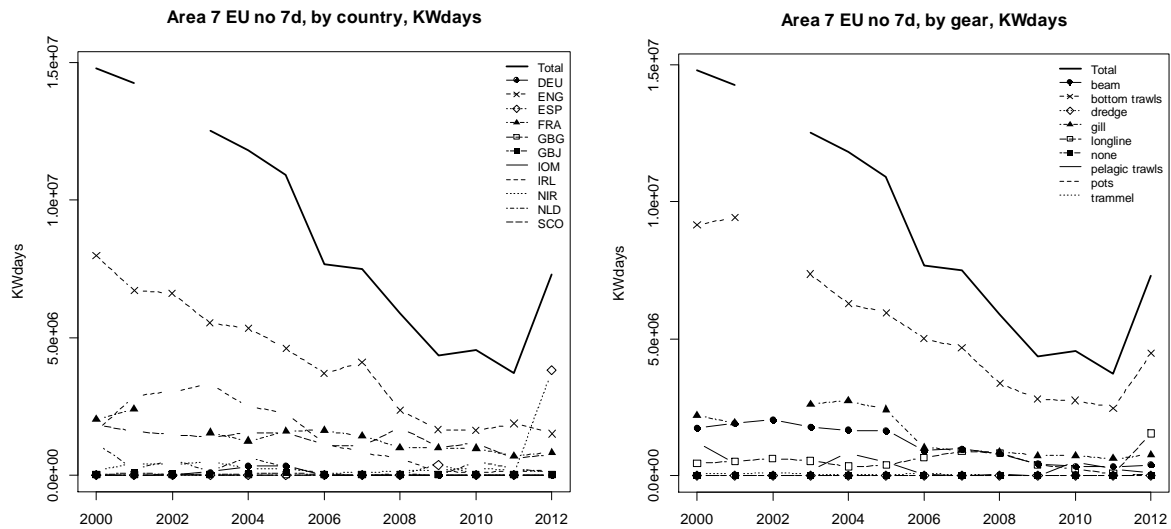

Figure 5.9.1.7.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area VII EU no VIIId. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### VII EU no VIIId Western Waters

There is uncertainty relating to French effort.

Within EU waters of Area VII, excluding VIIId, a wide variety of activity occurs incorporating a number of nations. Overall effort declined from 2004 until 2007, but has been fluctuating since. A relatively small proportion of effort is directed to deepwater fisheries (Table 5.9.1.7.3 and Figure 5.9.1.7.2).

The main gear in use is the bottom trawl, with France the primary contributor followed by Ireland and the UK. Bottom trawl effort has remained relatively stable throughout the time series. Within the UK effort by England has dropped gradually while that of Scotland has stayed stable.

Pelagic trawling is dominated by the Netherlands and with smaller amounts by Ireland, UK, France and Germany. Netherlands effort has decreased slightly in the last two years after being reasonably stable since 2003. Effort by Germany and France has been stable, while that of Ireland has begun to increase since 2008. Within the UK effort by England is stable while that of Scotland has declined.

Beam trawling, mainly carried out by England, Belgium and Ireland, has declined from a peak in 2003. This is likely due to a number of decommissioning schemes removing vessels from the fleet. Effort seems to have stabilised since 2009.

Dredging effort (by France, Scotland, England and Ireland) has remained stable through the time series. A small amount of effort is also directed toward pots and gillnets, particularly by France.

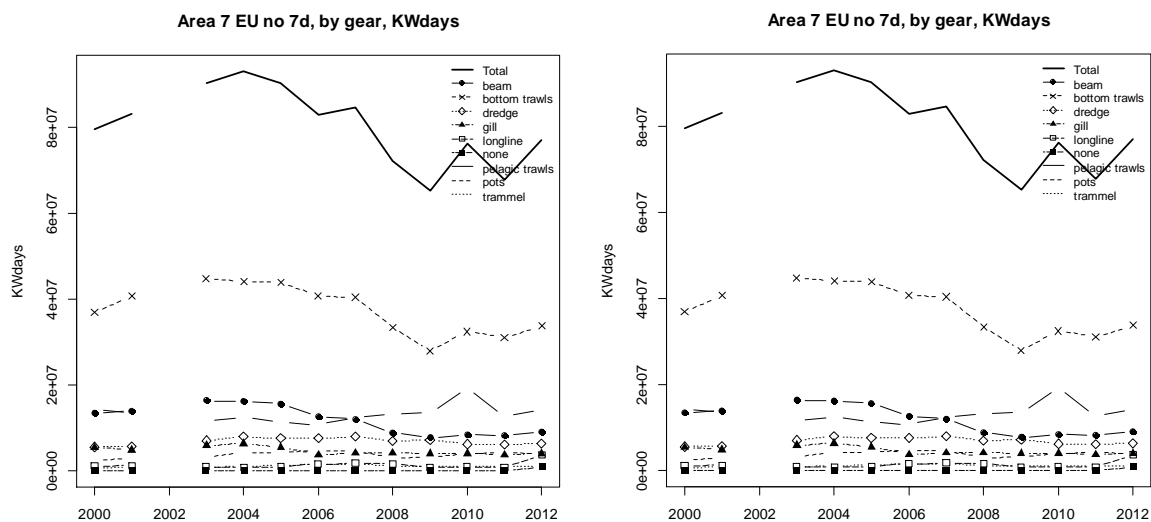

Figure 5.9.1.7.2.- Effort (kW\*days) reported within ICES Sub-area VII EU no VII d by gear type, 2000-2012, with (left) and without (right) reported deepwater effort. Due to uncertainty in French 2002 data this year has been removed from the figures.

### Deepwater VII non-EU

Prior to 2011 Area VII non EU effort was confined to the UK and was made up of bottom trawling and gill netting. This effort stopped in 2004. In 2011 France reported a small amount of bottom trawl effort and in 2012 Spain reported small amounts of bottom trawl and longline effort.

Figure 5.9.1.7.3. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area VII non-EU.

### Western Waters VII non-EU

There is uncertainty relating to French effort.

No effort was recorded in this area between 2006 and 2008, (Table 5.9.1.7.6). Prior to that there was some effort for Netherlands in pelagic trawl, and sporadic effort in bottom trawls, gill nets and longlines.

Since 2009 small amounts of bottom trawl effort have been recorded by France, Spain and Scotland. Longline effort was reported from 2010 to 2012 by France and Scotland again, and in 2012 by Spain. Occasional pelagic trawl effort has been reported by Germany, France, Spain and the Netherlands.

### 5.9.1.8 Fishing effort in ICES area VIId

#### Deepwater

Area VII EU VIId effort is primarily from UK and France and this effort fluctuates greatly from year to year.

2006 marks a change in effort from English beam to Scottish bottom trawl, although the bottom trawl effort has been in decline since its peak in 2008, (Figure 5.9.1.8.1). Between 2010 and 2012 France has reported bottom trawl effort as well.

From 2001 to 2004 the Netherlands reported some pelagic effort, and in 2010 and 2011 some bottom trawl effort has been recorded. France reported pelagic effort from 2000 to 2006.

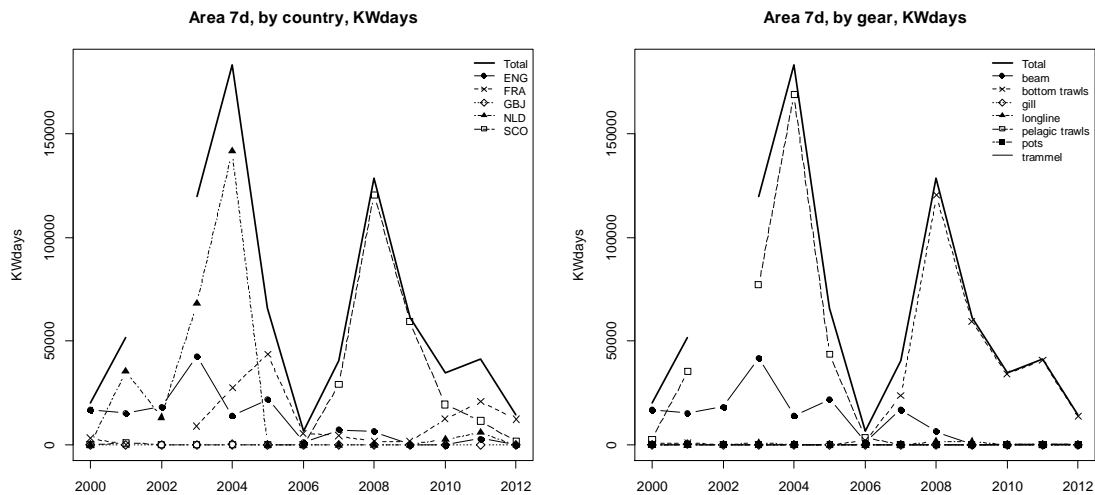

Figure 5.9.1.8.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area VIIId. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### Western Waters

Effort within Area VIIId had been increasing up to 2006, after which effort began to decline. Effort has appeared to stabilise over the last three years. France is the primary nation operating within this area, driving the overall trends. There is an issue with 2002 French data and therefore this year should be discounted. There is essentially no effort associated with deepwater fisheries (Table 5.9.1.8.3 and Figure 5.9.1.8.2).

While a wide variety of gears are utilised within this area, bottom trawling by France and dredging, also France and the UK, show the greatest effort. Pelagic trawling is primarily carried out by the Netherlands, France and Germany, with some minor effort from other nations. Beam trawling is mainly by Belgium, with small effort from France and UK, and the majority of trammel net effort is by France.

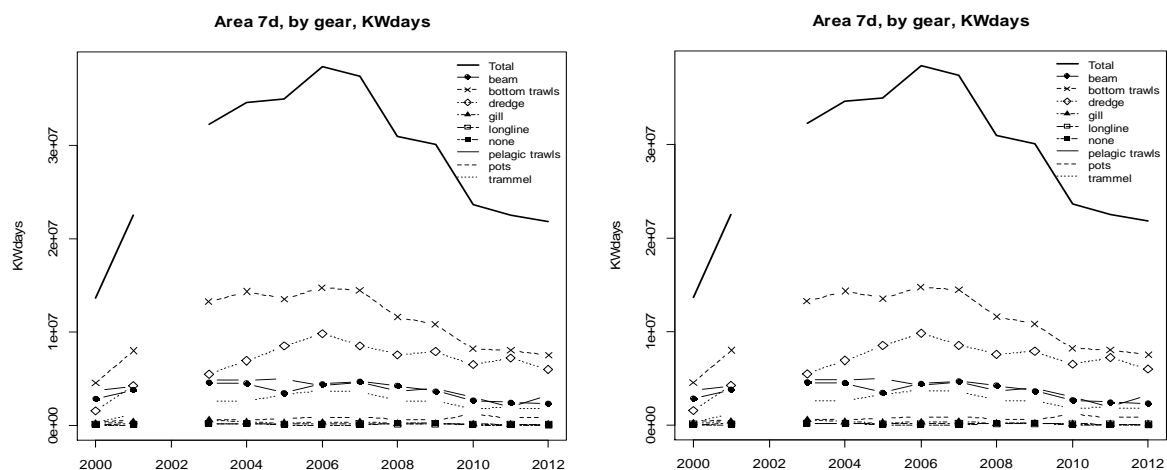

Figure 5.9.1.8.2.- Effort (kW\*days) reported within ICES Sub-area VIId by gear type, 2000-2012, with (left) and without (right) reported deepwater effort. Due to uncertainty in French 2002 data this year has been removed from the figures.

### 5.9.1.9 Fishing effort in the Biologically Sensitive Area

There is uncertainty relating to 2002 French effort.

From a peak in 2003 there was a gradual decline until 2006 after which effort fluctuated. In 2011 there was a 20% decrease compared to 2010, but in 2012 effort levels increased again, comparable to those between 2005 and 2010 (Table 5.9.1.9.1 and Figure 5.9.1.9.1). Overall, bottom trawl effort predominates within the area, in common with the picture for the wider EU waters of Area VII. Ireland provides the majority of this effort, followed by France and the UK. Prior to 2009 Ireland and France contributed similar amounts but since 2010 Irish effort increased while France decreased. In 2012 Spain reported high bottom trawl effort for this area.

Pelagic trawls effort had increased in recent years, in particular by Irish and German vessels, while effort from the Netherlands has stayed constant.

Gillnetting, by France, Ireland and England, shows a decline in effort similar in recent years. This is mainly down to a reduction of French effort. Beam trawling, carried out almost exclusively by Ireland, showed a pronounced decline until 2008 after which effort stabilised. There was a drop in Irish effort in 2011 but this increased again in 2012.

The use of pots and dredges in the area is low, however both gears show marked increases in most recent years. Both gears are used almost exclusively by Ireland.

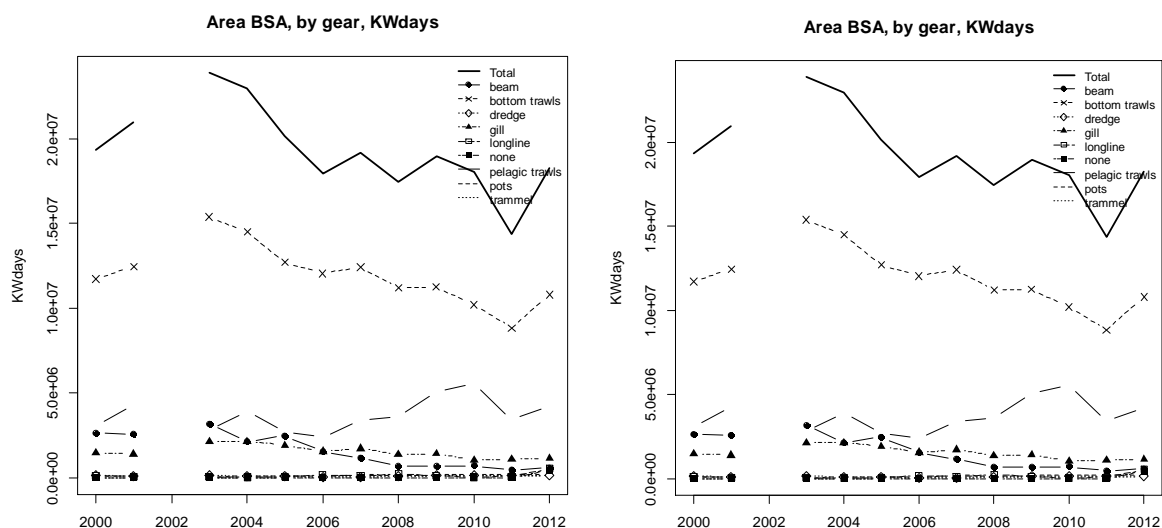

Figure 5.9.1.9.1.- Effort (kW\*days) reported within the BSA by gear type, 2000-2012, with (left) and without (right) reported deepwater effort. Due to uncertainty in French 2002 data this year has been removed from the figures.

### 5.9.1.10 Fishing effort in ICES area VIII

#### Deepwater VIII EU

Most of the effort in this area was contributed by four countries, UK, France, Spain and Netherlands, as shown in Tables 5.9.1.10.1 and 5.9.1.10.2. Small amounts of effort were reported from Ireland, Portugal and Germany on occasion.

Netherlands effort, entirely for pelagic trawl, declined to zero in 2007, but some was recorded again in 2010. Netherlands effort comprised the majority of the pelagic trawling effort.

UK and French effort increased to the mid 2000s but has since declined. Spanish effort was stable at low levels between 2002 and 2008, before recording a major increase in 2009. After this peak Spain reported no data in this area until 2012, however the 2012 effort was three times the previous highest effort.

Figure 5.9.1.10.1 shows trends in effort by country and by main gears illustrating that bottom trawls were the most important followed by pelagic trawls, gill nets and longlines. In general the pattern of peak effort in the mid 2000s followed by decline is evident in all gears. There was a peak of effort in both bottom trawl and longlines in 2009 but this had decreased again in 2010 and 2011. The Spanish effort reported this year lifts 2012 to the highest in the time series.

Bottom trawl was the predominant gear used in this region, with, historically, 92% of the effort reported by France. This was reversed in 2012 with Spain reporting 90% of the effort. Gill net effort was initially

confined to France but since 2004 the UK has been contributing 50%. In 2012 Spain again reported the majority of the effort.

Over the time series the majority of the longline effort came from the UK, but Spain reported large effort for 2009, and doubled that effort in 2012. In 2011 France reported increased effort for trammel nets, similar to that reported for the early 2000s, but this decreased again in 2012.

Figure 5.9.1.10.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area VIII EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### Western Waters VIII EU

Note: There is great uncertainty relating to effort descriptions of this area. Issues appear in French 2002 data and there is uncertainty around 2010 data. Spain did not provide information for 2010 or 2011.

Two nations primarily fish this area, France and Spain. The overall trend has fluctuated within this area with greatest effort around 2006/2007 following increased French effort. With the lack of Spanish data in 2010 and 2011 it is impossible to provide information on recent effort trends. Spanish effort has been reported again for 2012 which has led to the increase in recorded effort. Little effort is associated with deepwater fisheries (Table 5.9.1.10.3 and Figure 5.9.1.10.2). Most effort occurs with bottom trawling gear, dominated by France. French bottom trawl effort in 2010 and 2011 is approximately 40% of what it was in the preceding five years, and it dropped further by 40% in 2012. Spanish effort for 2012 is quite high, similar to levels reported by France for 2010 and 2011. A small (1-2%) proportion of effort is contributed by Portugal.

Pelagic trawling accounts for around 12-18% of effort within the area, again primarily by France and Spain. French effort had been stable at a low level between 2008 and 2011, but showed an increase again in 2012. Spain reported pelagic effort for the first time since 2005.

Other gears are used within the area to lesser extents, with trammel and gillnetting accounting for around 10% each. France is again the dominant nation using both gear classes, particularly within the trammel category. French trammel net effort however, which was stable until 2009, has since decreased by approximately 90%. French gill net effort has begun to decrease since 2010.

Spain reported longline effort for 2012 well in excess of that reported by France. French effort has begun to increase since 2010 after a period of low, stable, effort.

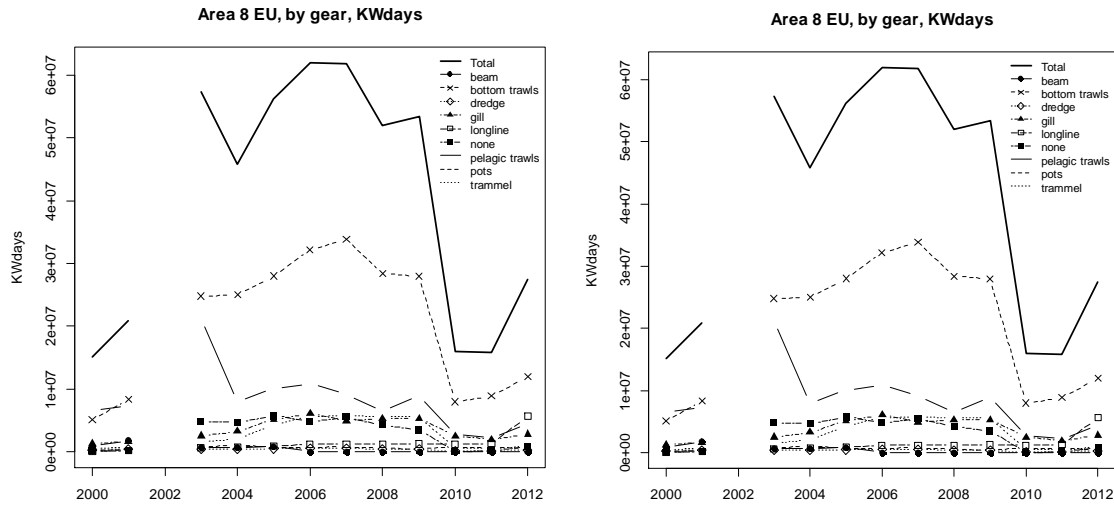

Figure 5.9.1.10.2.- Effort (kW\*days) reported within ICES Sub-area VIII EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort. Due to uncertainty in French 2002 data this year has been removed from the figures.

### Deepwater VIII non-EU

Fishing effort in Area VIII non EU was minimal. The UK has some historical effort for gill nets and pots, and France conducted a small amount of bottom trawl in 2011. Spain reported bottom trawl and longline effort for 2012

### **Western Waters VIII non-EU**

Minimal effort occurs sporadically within this area, Table 5.9.1.10.6. In 2012 Spain reported effort in all categories except gill nets and pots. Without this Spanish effort total effort in 2012 in this area would have decreased compared to 2010 and 2011.

### 5.9.1.11 Fishing effort in ICES area IX

#### Deepwater IX EU

Most of the effort in area IX was contributed by Portugal as shown in Tables 5.9.1.11.1 and 5.9.1.11.2. Occasional, small amounts of effort were recorded by France and UK. Prior to 2003 recorded effort was quite low and the highest values occur in recent years.

Portuguese longline effort is the most important in the area and this gear is responsible for the overall trend.

Portuguese bottom trawl effort peaked in 2007, and none was reported for 2012. Between 2002 and 2010 Spanish bottom trawl effort fluctuated slightly, but the effort recorded for 2012 is the highest for the time series.

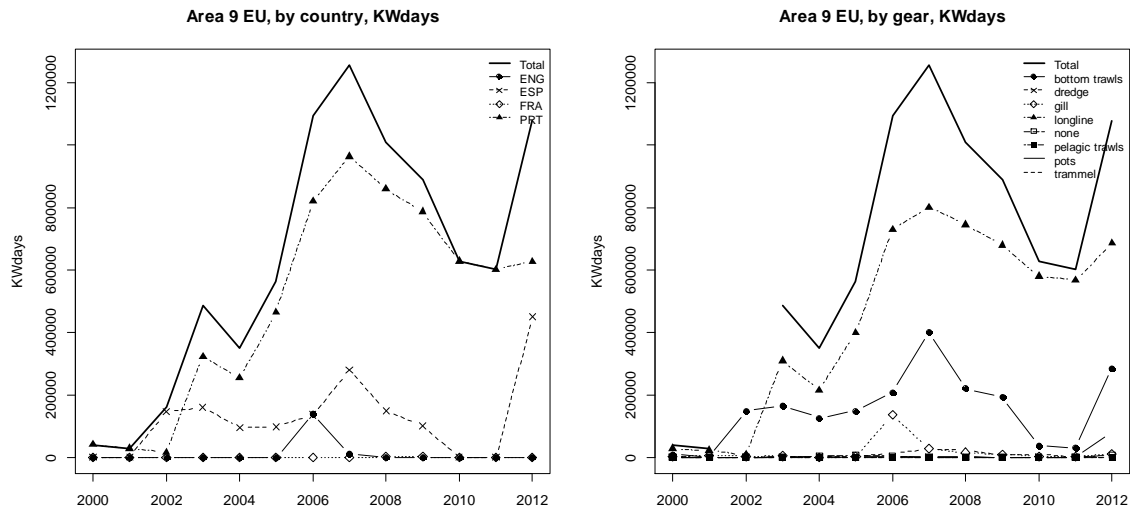

Figure 5.9.1.11.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area IX EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### Western Waters IX EU

Two nations are active in this area, Portugal and Spain, although minor contributions from other nations do occur (Table 5.9.1.11.3 and Figure 5.9.1.11.2). Spanish data was not provided for 2010 or 2011.

Overall effort increased from 2001 peaking between 2007 and 2009. With the lack of Spanish data for 2009 and 2010 effort in the area appeared to drop by approximately 50%. The inclusion of Spanish data for 2012 brings the total effort level back up to 2006 levels, just before the peak. Comparatively little effort is directed toward deepwater fisheries, apart from Portuguese longlines. Spanish deepwater effort was only provided in this area for 2009 and 2012. Given the low effort assigned to deepwater fisheries in these years deepwater effort may not have been significant over the period.

The main fishing activity is bottom trawling, and while this is carried out by both nations, Portuguese effort is much higher. Over the period Portuguese effort increased until 2007, but has been declining slowly since. In 2008 and 2009 it made up 80% of the bottom trawl effort. Spanish effort levels had remained relatively stable in recent years, up to 2009, but the effort reported for 2012 is very similar to Portuguese effort for the year.

Spanish pelagic trawls were the next most important, in terms of effort, up to 2009. The Spanish pelagic effort for 2012 is approximately 35% of that reported for 2009.

Low effort levels of trammel net, gillnet, and pots occur, are carried out, particularly by Portugal. Trammel net effort has increased in recent years, while effort in both pots and gill nets have been in decline.

Table 5.9.1.11.3.- Effort (kW\*days) by country, gear and vessel size group within ICES Sub-area IX EU, 2000-2012.

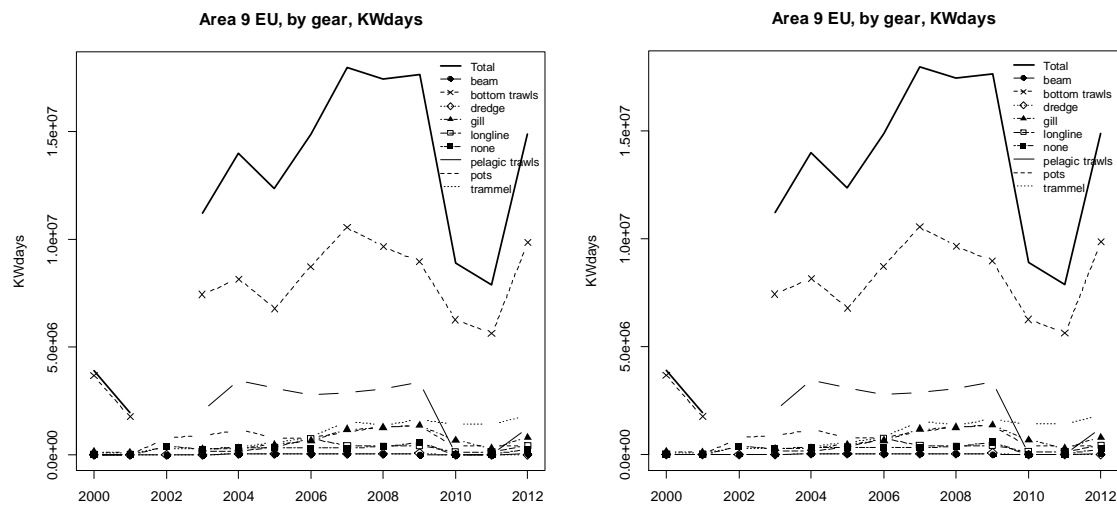

Figure 5.9.1.11.2.- Effort (kW\*days) reported within ICES Sub-area IX EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort. Due to uncertainty in French 2002 data this year has been removed from the figures.

### Deepwater IX non-EU

In Area IX non-EU effort peaked between 2003 and 2005 but has declined greatly since. All the effort is Portuguese. Between 2005 and 2011 it has been solely longline. In 2012 Portugal recorded an increase in longline effort and Spain recorded bottom trawl effort.

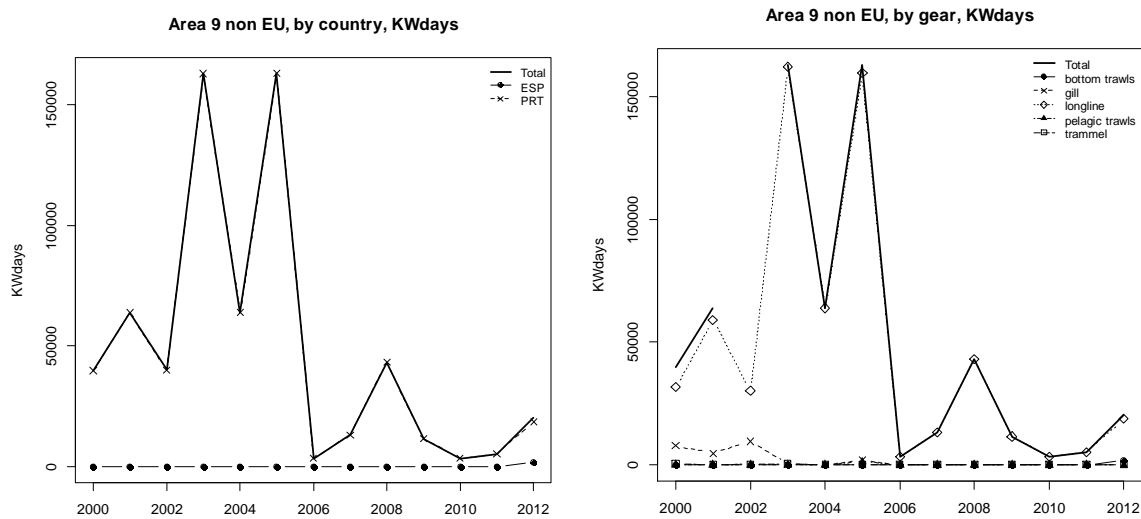

Figure 5.9.1.11.3. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area IX non-EU. Due to the uncertainty in French 2002 data this year has been removed from the figure.

### Western Waters IX non-EU

Little effort is associated with this area in recent years. Prior to 2006 a variety of gears were used, all at low levels, and all of them by Portugal (Table 5.9.1.11.6. and Figure 5.9.1.11.4.). Since 2006, effort declined and was focused in longlines. In 2012 Portuguese longline effort increased. Some of the longline effort is associated with deepwater fisheries.

In 2012 Spain reported effort for bottom trawls, pelagic trawls and longlines. Lithuania reported effort for pelagic trawl.

Table 5.9.1.11.6.- Effort (kW\*days) by country, gear and vessel size group within ICES Sub-area IX non-EU, 2000-2012.

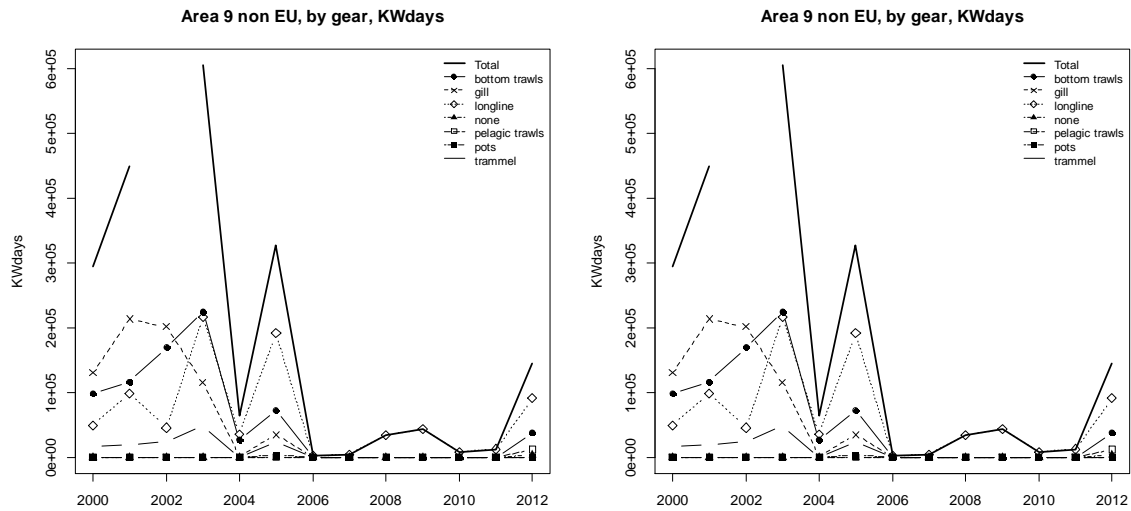

Figure 5.9.1.11.4.- Effort (kW\*days) reported within ICES Sub-area IX non-EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort. Due to uncertainty in French 2002 data this year has been removed from the figures.

### 5.9.1.12 Fishing effort in ICES area X

#### Deepwater X EU

Reporting of effort in ICES X has been more sporadic than other areas. In 2012 Portugal updated their submission and reported large longline effort for 2009 to 2012. For the first three years this was quite consistent, with a small decrease in 2012.

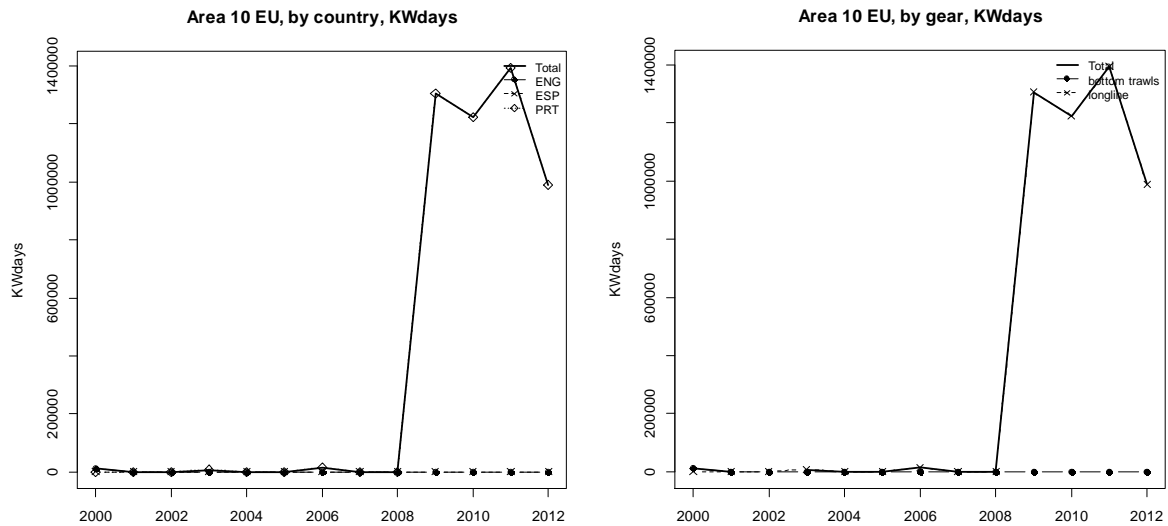

Figure 5.9.1.12.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area X EU.

### Western Waters X EU

Little effort is carried out within this area. The effort that does occur is with longlines by Portugal (Table 5.9.1.12.3 and Figure 5.9.1.12.2). This effort was regularly associated with deepwater fisheries. In 2012 Spain reported effort for longline, gill net and bottom trawl. Spanish longline effort is not deepwater effort.

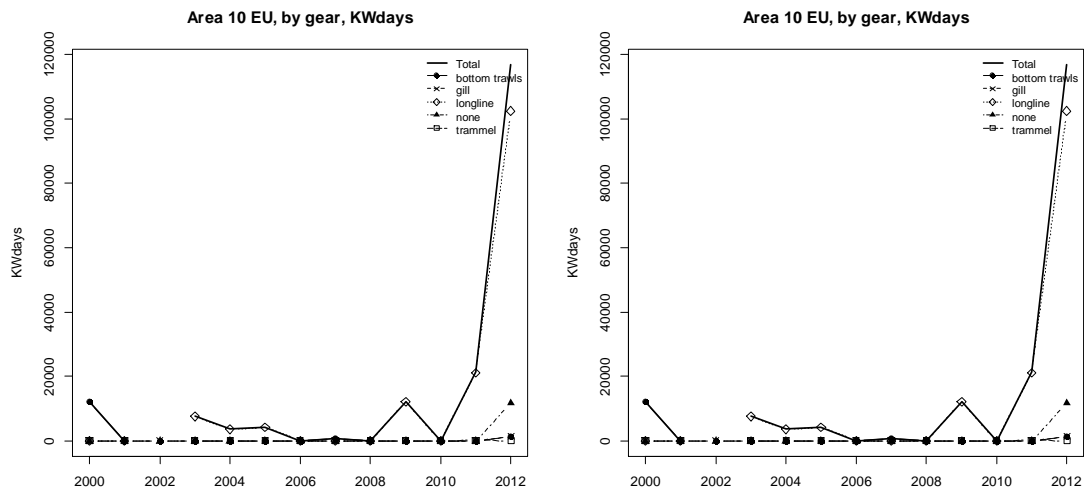

Figure 5.9.1.12.2.- Effort (kW\*days) reported within ICES Sub-area X EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort.

### Deepwater X non-EU

Most of the effort in the non EU part of X is Portuguese longline, with some pelagic trawl effort reported for 2005. Ireland, 2004 to 2005, and the UK, 2000, recorded some effort from bottom trawls. Spain reported a small amount of longline effort for 2012, (Table 5.9.1.12.4 and 5.9.1.12.5 and Figure 5.9.1.12.3).

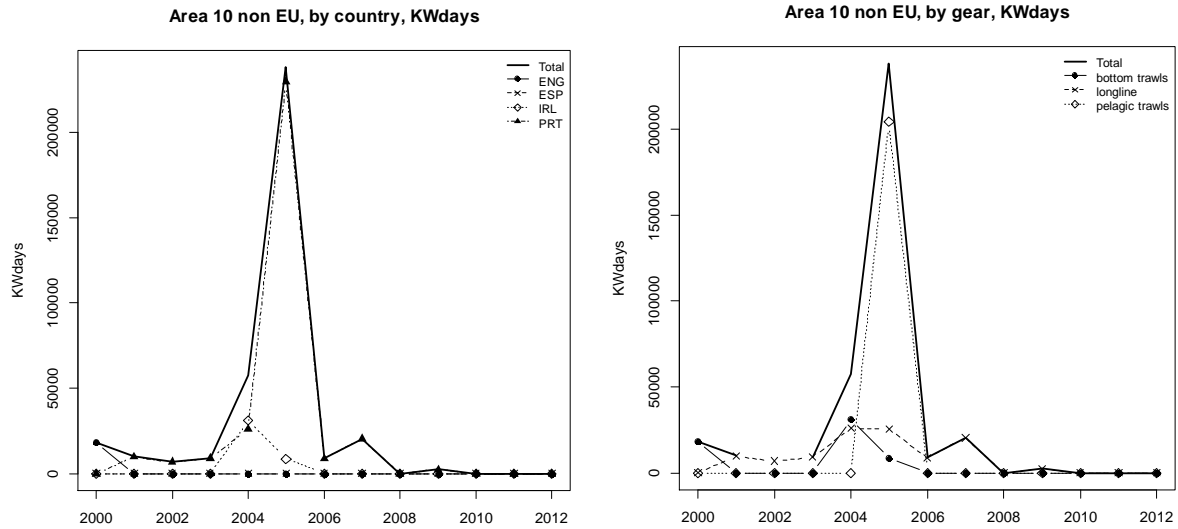

Figure 5.9.1.12.3. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area X non-EU.

### Western Waters X non-EU

Little effort is carried out within Area X non EU. Effort which does occur is primarily with longlines by Portugal, associated with deepwater fisheries (Table 5.9.1.12.6. and Figure 5.9.1.12.4.). this effort ceased in 2009.

Occurrence of other gears or nations is more sporadic and tends to relate to deepwater fisheries, including small amounts of bottom trawling in 2004/2005 by Ireland. From 2010 to 2012 France recorded effort in all gear types. In 2012 Spain reported major effort for longlines and much smaller effort for bottom and pelagic trawls.

Table 5.9.1.12.6.- Effort (kW\*days) by country, gear and vessel size group within ICES Sub-area X non-EU, 2000-2012.

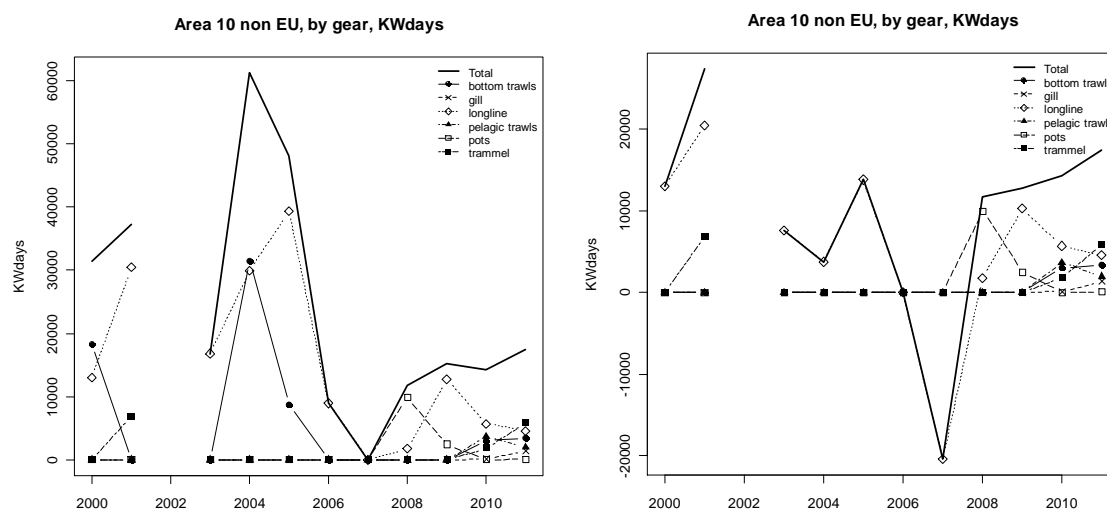

Figure 5.9.1.12.4.- Effort (kW\*days) reported within ICES Sub-area X non-EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort. Due to uncertainty in French 2002 data this year has been removed from the figures.

### 5.9.1.13 Fishing effort in ICES area XII by fisheries and Member States only linked to Deep Sea species

Overall effort from ICES XII is shown in Table 5.9.1.13.1. The UK recorded most effort throughout the series (mainly using otter trawl and gill net – Table 5.9.1.13.2 and Figure 5.9.1.13.1) although the trawl effort ceased in 2005 and all UK effort ceased in 2008. Other countries contributing effort included Germany, Netherlands, Estonia and Ireland. Spain provided effort for 2009 and is the only country to provide data for 2012. This effort was for bottom trawl and some pelagic trawl and other unspecified gears. In 2010 and 2011 only France has provided effort, from bottom trawls.

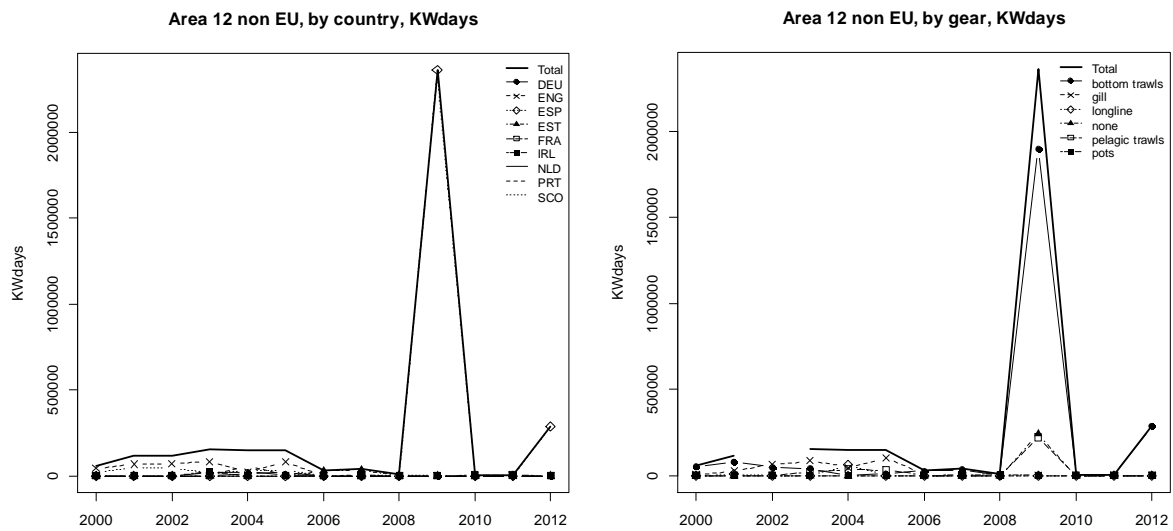

Figure 5.9.1.13.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in ICES Sub-area XII non-EU.

#### 5.9.1.14 Fishing effort in ICES area XIV by fisheries and Member States only linked to Deep Sea species

Effort in ICES Area XIV, shown in Tables 5.9.1.14.1 and 5.9.1.14.2 and Figure 5.9.1.14.1, is mainly expended outside EU waters by Germany and the UK using otter trawls. UK effort peaked in 2004 but has since declined while German effort rose in the mid 2000s and remains at a relatively high level. There was an increase in German effort in 2011 but this has dropped to recent figures again in 2012. Spain has reported otter trawl effort for 2009 and a smaller amount for 2012. German pelagic trawling took place in the mid 2000s with effort also reported for 2011.

### 5.9.1.15 Fishing effort in CECAF area 34.1.1

#### Deepwater 34.1.1 EU

All effort in CECAF 34.1.1 has been recorded by Portugal (Tables 5.9.1.15.1 and 5.9.1.15.2 and Figure 5.9.1.15.1). All the effort is for longline bar 2004 when it was recorded for trammel nets.

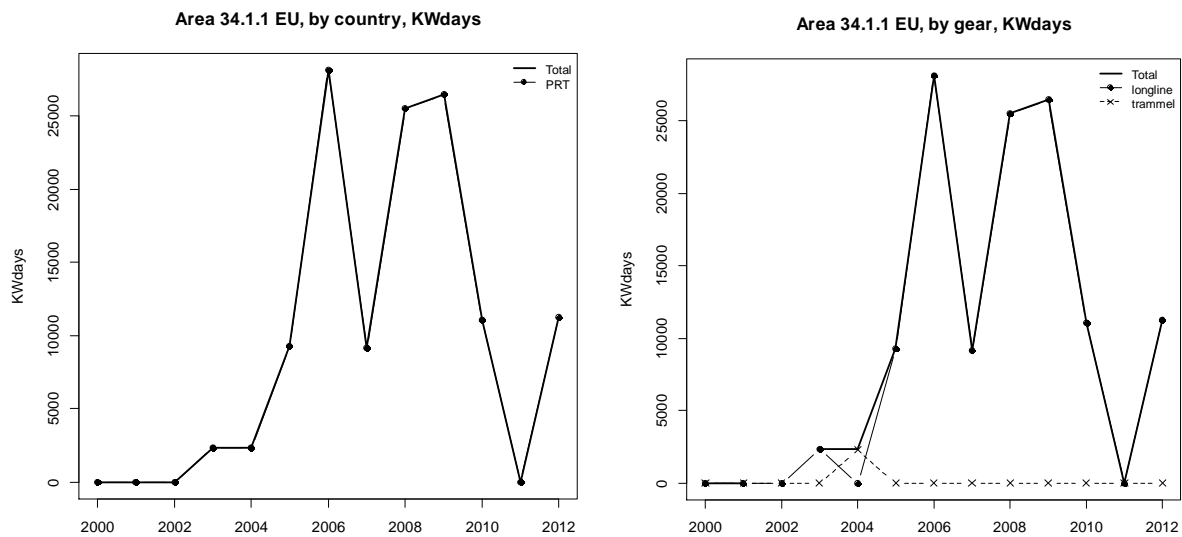

Figure 5.9.1.15.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in CECAF area 34.1.1 EU.

### Western Waters 34.1.1 EU

Effort is low within this area. Portugal was the sole nation with effort reported in this area and is associated with longlining (Table 5.9.1.15.3 and Figure 5.9.1.15.2). Much of this effort is used to target deepwater fisheries. Between 2008 and 2009 greater effort became directed to other fisheries, and deepwater effort was further reduced in 2010 and 2011. In 2012 however all Portuguese longlining effort was focused on deepwater. A single year of Portuguese bottom trawling created an effort peak in 2007.

In 2012 Spain reported longlining effort which was not directed at deepwater.

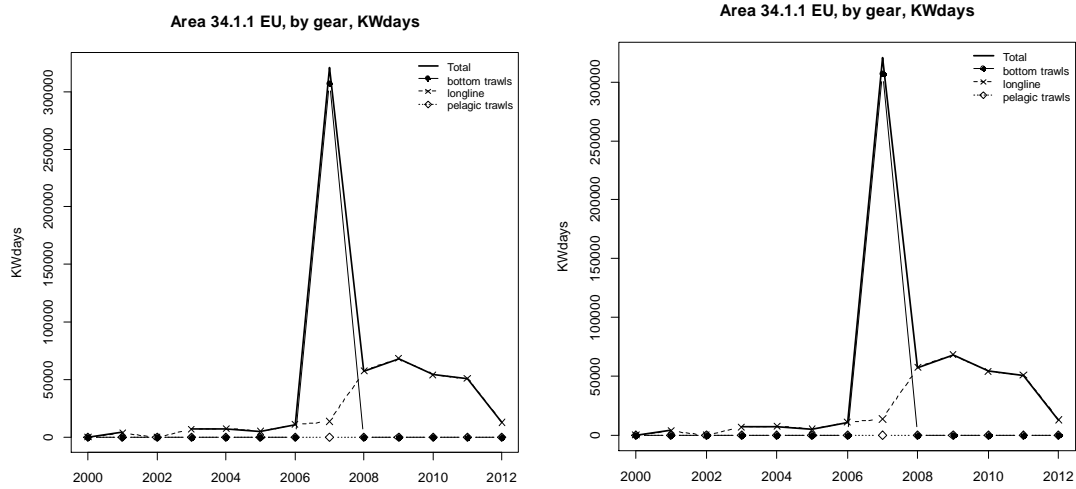

Figure 5.9.1.15.2.- Effort (kW\*days) reported within CECAF area 34.1.1 EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort.

#### Western Waters 34.1.1 non-EU

Effort is low within this area. Portugal reported bottom trawl effort for 2000 to 2002 and again for 2009 and 2010. Since 2003 the major effort is for Portuguese longlines.

In 2012 Spain reported small effort for longlines. In 2010 Lithuania recorded effort for pelagic trawling.

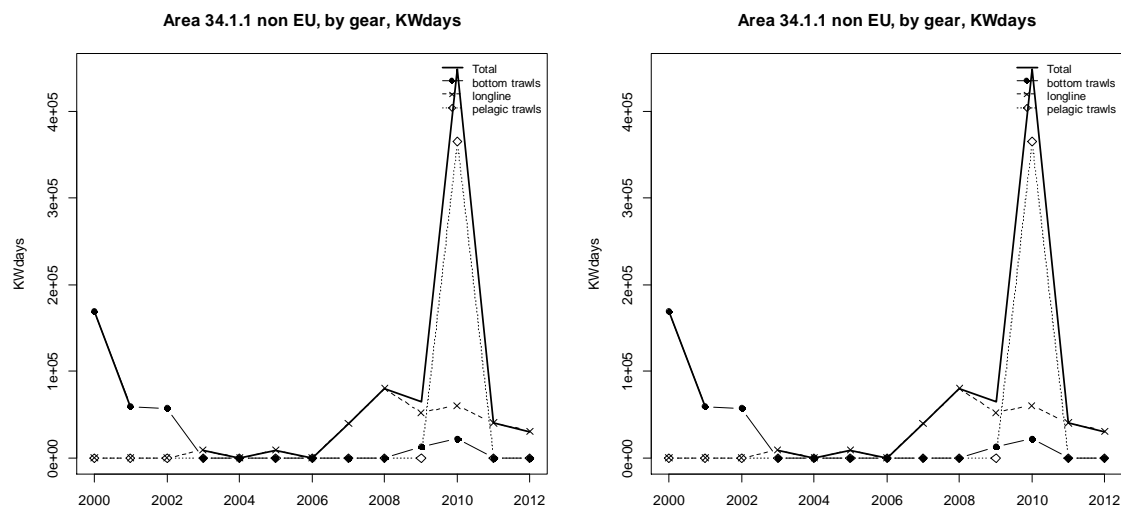

Figure 5.9.1.15.3.- Effort (kW\*days) reported within CECAF area 34.1.1 non-EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort.

#### 5.9.1.16 Fishing effort in CECAF area 34.1.2

##### Deepwater 34.1.2.EU

Up to 2011 all effort in CECAF 34.1.2 was in EU waters and recorded by Portugal, Tables 5.9.1.16.1 and 5.9.1.16.2. Prior to 2010 there had been an increasing trend in effort in the EU area, however a recent resubmission of data has shown a large increase in effort since 2010. All this effort is by longline.

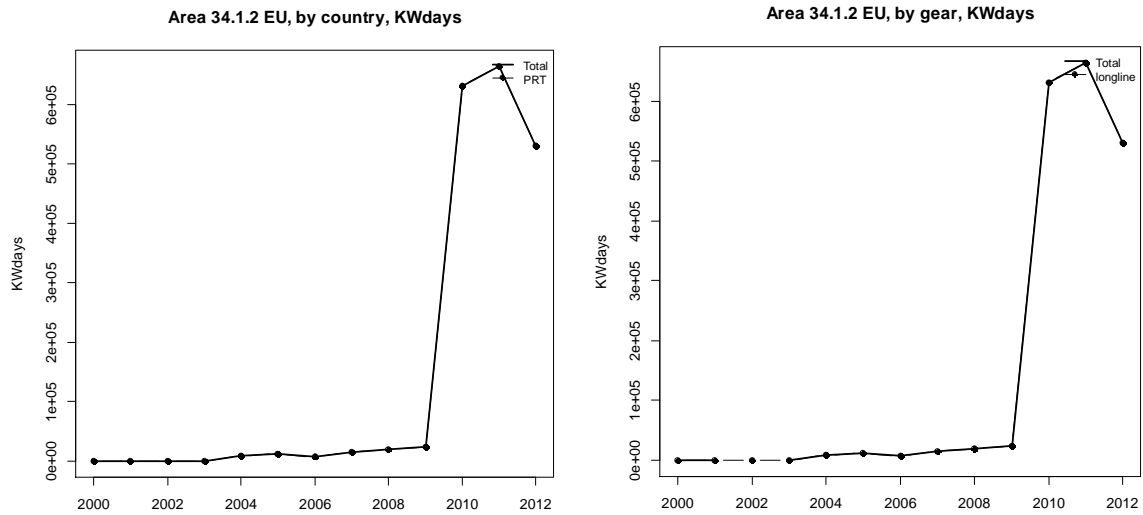

Figure 5.9.1.16.1. Deep Sea fishing effort (kW\*days), 2000 – 2012, by country and by gear, in CECAF area 34.1.2 EU.

### Western Waters 34.1.2.EU

A revision of Portuguese data has increased its longline effort in this area greatly between 2010 and 2012, (Table 5.9.1.16.3 and Figure 5.9.1.16.2). Spain has also reported longline effort for 2012.

#### 5.9.1.17 Fishing effort in CECAF area 34.1.3

##### Deepwater and Western Waters 34.1.3 EU

No effort was submitted within this area.

##### Deepwater 34.1.3 non-EU

Very little effort has been recorded for this area. The Netherlands recorded some pelagic trawl effort for 2004, and Spain recorded bottom trawl effort for 2012.

### Western Waters 34.1.3 non-EU

No effort data has regularly been submitted for this area. The Netherlands made a submission of deepwater effort in 2004, highlighting a data issue, and in 2012 Spain also submitted deepwater effort.

### 5.9.1.18 Fishing effort in CECAF area 34.2

#### Deepwater 34.2.0 EU

Effort has been recorded for longline in this area by Portugal over the past four years.

Table 5.9.1.18.1.- Deep Sea fishing effort (kW\*days) 2000 – 2012 by member state CECAF area 34.2.0 EU.

## Western Waters 34.2.0 EU

Effort is low within this area. According to the data provided Ireland carried out some pelagic trawls in 2008, and Portugal submitted longline effort for 2011. Spain has recorded longline effort for 2012, (Table 5.9.1.18.3 and Figure 5.9.1.18.1).

Table 5.9.1.18.3.- Effort (kW\*days) by country, gear and vessel size group within CECAF area 34.2.0 EU, 2007-2012.

### Western waters CECAF Area 34.2.0 non-EU

Effort is low within this area. According to the data provided, a relatively small Portuguese longline fishery, which began in this area in 2005, has fluctuated in recent years. In 2012 Lithuania has reported pelagic trawl effort and Spain has reported a large amount of bottom trawl effort, (Table 5.9.1.17.2 and Figure 5.9.1.18.2).

Table 5.9.1.18.6.- Effort (kW\*days) by country, gear and vessel size group within CECAF area 34.2.0 non-EU, 2000-2012.

| Area                | Gear           | Country  | Vessel length | 2000   |             |                       | 2001   |             |                       | 2002   |             |                       | 2003   |             |                       | 2004   |             |                       | 2005   |             |                       |

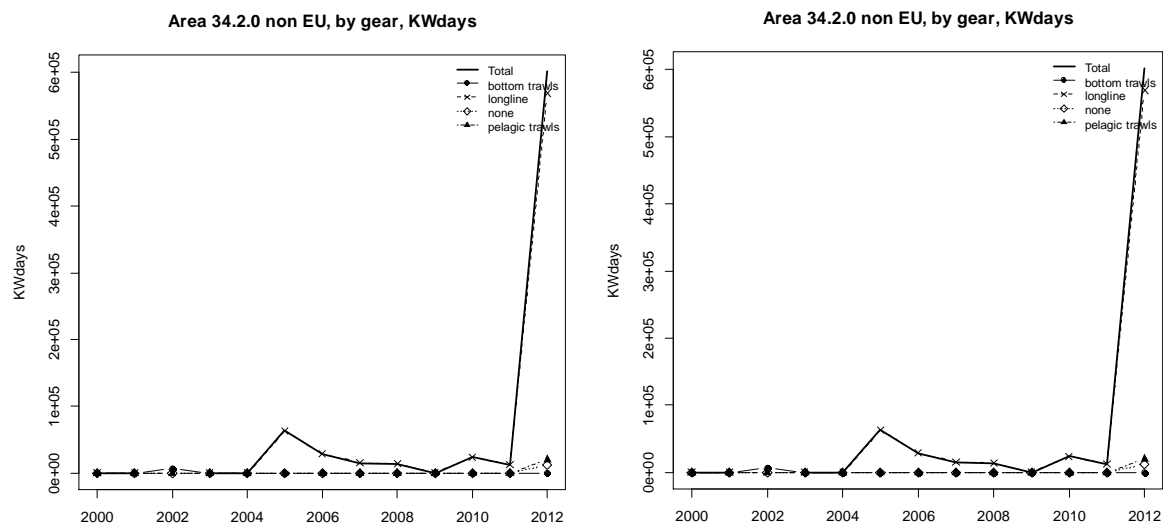

Figure 5.9.1.18.2.- Effort (kW\*days) reported within CECAF area 34.2.0 non-EU by gear type, 2000-2012, with (left) and without (right) reported deepwater effort.

### 5.9.2 ToR 1b Catches (landings and discards) by area

In this section of the report tables showing catches by gear groups (regulated and unregulated), area and nation are only summaries. The full tables are available on the JRC website:

<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

Some of the tables and graphs presented in this section need to be treated with caution. A full analysis of the data can't be undertaken due to discrepancies in the data submitted by Portugal. This mainly affects information from ICES area VIII to CECAF area 34.2 0.

Similarly Spain has not provided data for 2010 and 2011.

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.1 Catches in ICES area I by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.2 Catches in ICES area II by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.3 Catches in ICES area III by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.4 Catches in ICES area IV by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.5 Catches in ICES area V by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.6 Catches in ICES area VI by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.7 Catches in ICES area VII excluding VIId by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-

13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.8 Catches in ICES area VIId by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.9 Catches in the Biologically Sensitive Area by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.10 Catches in ICES area VIII by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.11 Catches in ICES area IX by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.12 Catches in ICES area X by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.13 Catches in ICES area XII by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.14 Catches in ICES area XIV by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.15 Catches in CECAF area 34.1.1 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.16 Catches in CECAF area 34.1.2 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.17 Catches in CECAF area 34.1.3 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.2.18 Catches in CECAF area 34.2 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-

13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

### *5.9.3 ToR 1c CPUE and LPUE (landings and discards) by area*

In this section of the report tables showing LPUE and CPUE by gear groups (regulated and unregulated), area and nation are only summaries. The full tables are available on the JRC website:

<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### **5.9.3.1 CPUE and LPUE in ICES area I by fisheries and Member States only linked to Deep Sea species**

T STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### **5.9.3.2 CPUE and LPUE in ICES area II by fisheries and Member States only linked to Deep Sea species**

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### **5.9.3.3 CPUE and LPUE in ICES area III by fisheries and Member States only linked to Deep Sea species**

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.4 CPUE and LPUE in ICES area IV by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.5 CPUE and LPUE in ICES area V by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.6 CPUE and LPUE in ICES area VI by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.7 CPUE and LPUE in ICES area VII excluding VIId by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.8 CPUE and LPUE in ICES area VIId by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.9 CPUE and LPUE in the Biologically Sensitive Area by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.10 CPUE and LPUE in ICES area VIII by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.11 CPUE and LPUE in ICES area IX by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.12 CPUE and LPUE in ICES area X by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.13 CPUE and LPUE in ICES area XII by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.14 CPUE and LPUE in ICES area XIV by fisheries and Member States only linked to Deep Sea species

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.15 CPUE and LPUE in CECAF area 34.1.1 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.16 CPUE and LPUE in CECAF area 34.1.2 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.17 CPUE and LPUE in CECAF area 34.1.3 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.3.18 CPUE and LPUE in CECAF area 34.2 by fisheries and Member States

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.4 *ToR 2 Potential requirement, provision, process, and evaluation of VMS data to Deep Sea fisheries management*

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

#### 5.9.5 *ToR 3 Recent effort trends in pelagic fisheries, with emphasis on ICES areas XI, X and CECAF areas*

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-

13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

*5.9.6 ToR 5 Comments on data quality and unexpected effects in Deep Sea and Western Waters fisheries data*

STECF EWG 13-06 has not updated the section due to time constraints. The statistics are available as electronic appendixes to the report and will be commented during the forthcoming STECF EWG 13-13 on fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy). Last year's deliverable (STECF report 12-16) can be downloaded:

<http://stecf.jrc.ec.europa.eu/reports/effort>

## 5.10 Bay of Biscay effort regime evaluation in the context of Council Regulation (EC) No 388/2006)

### 5.10.1 ToR 1.a Fishing effort in kWdays, GTdays and number of vessels by Member State and fisheries

Catch and effort data have been provided by all Member States. Spanish data have been provided only for 2012. Spanish data provided the previous years on the period before 2012 are now under revision, effort and catch time series need to be reconsidered before further complete analysis of the activity in this area.

#### All analyses were made this year with only 2012 Spanish data.

As data problems were discovered with the French effort information for 2002, STECF-EWG-13-05 decided only to provide effort trends graphically starting from 2003 onwards.

Following the ToRs, all analyses were made this year for 8a and 8b separately.

**Figure 5.10.1.1: 8a-BoB, Distribution per country (and gear) of the nominal effort (KWDays).**

In 8a-BoB, 90% of 2012 effort is French, 9% Spain and 1% Belgium. The main French fisheries are otter, trammel, gill and pel\_trawl. The main Spain fisheries are longline, otter and gill. Only Belgium beam trawl fleet are operational in quarter 3 in 8a-BoB (Figure 5.10.1.1).

Figure 5.10.1.2: 8b-BoB, Distribution per country (and gear) of the nominal effort (KWDays).

In 8b-BoB, 69% of effort in 2012 is French, 25% Spain and 6% Belgium. The main French fisheries are otter, trammel, gill, longline and pel\_trawl. The main Spain fisheries are otter, longline and pel\_seine. Only Belgium beam trawl fleet are operational in quarter 3 in 8b-BoB (Figure 5.10.1.2).

All 2012 figures presented below take into account the Spanish data (only provided for this year). This issue must be kept in mind before any firm conclusions are drawn.

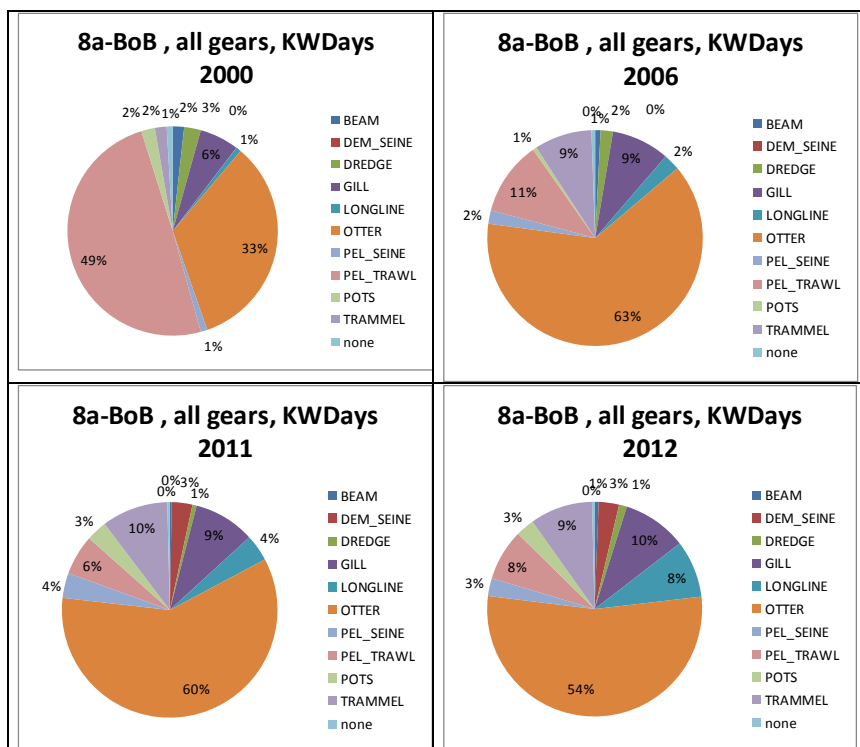

Figure 5.10.1.3: 8a-BoB, Trend in the distribution per gear of the nominal effort (KWDays).

The French otter trawl fleet being by far the dominating fleet with percentages around 60% of the effort deployed in the last 8 years in 8a-BoB (Table 5.10.1.1 and Figures 5.10.1.3).

The other fleets involved are the French trammel and gill nets with increasing trends from about 5% in 2000 up to 10% in the last few years.

The predominantly French Pelagic trawl effort went down from about 50% in the beginning of the series to around 7% in the last few years following a large decommissioning due to the anchovy crisis.

The Belgian beam trawl fleet accounts only for about 4% of the effort.

The Spanish and French longline fleet represent together 9% of the effort in 2012.

Demersal seine is a new gear which appears the last three years.

Information on the nominal effort of the specific condition SBCIIIART5 is given in Tables 5.10.1.1 5.10.1.5 and 5.10.1.6. As mentioned above, data broken down following this specific condition were only provided for 2010-2012 period for French vessels and since 2006 for Belgian vessels, introducing a shift for the main gear type from the “none” category to the specon “SBCIIIART5”. The specon “SBCIIIART5” was not provided for Spanish data. Following these considerations, no firm conclusion could be drawn based on the figures 5.10.1.5 presented below.

As a quality check, STECF routinely compares the data currently submitted with the data submitted during the previous year, as is displayed in Table 5.10.1.3. Compared to the data submitted in 2011, no differences appear between the two data sets except some small differences which appear for 2011 English otter trawl and for 2000&2001 Danish pelagic trawl and 2009 Danish otter trawl.

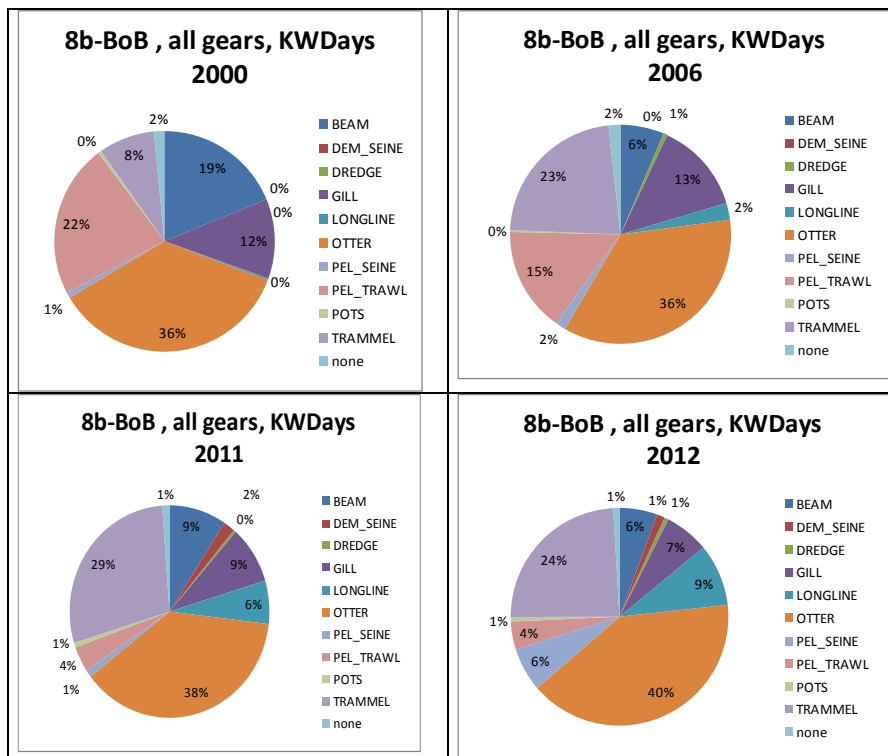

Figure 5.10.1.4: 8b-BoB, Trend in the distribution per gear of the nominal effort (KWDays).

The French otter trawl fleet being by far the dominating fleet with percentages around 38% of the effort deployed in all the period in 8b-BoB (Table 5.10.1.2 and Figures 5.10.1.4). The percentage increase a little in 2012 adding the Spanish otter trawl.

The other fleets involved are the French trammel nets with increasing trends from about 8% in 2000 up to 27% in the last five years and French gill nets with stable trends from about 10% in all the period.

The French Pelagic trawl effort went down from about 20% in the beginning of the series to less than 5% in the last few years following a large decommissioning due to the anchovy crisis.

The Belgian beam trawl fleet accounts for about 8% of the effort in the last eight years.

The French longline fleet increase the last few years from less than 1% up to 7% in 2011 and 9% in 2012 adding the Spanish longline fleet. represent together 9% of the effort in 2012.

Demersal seine is a new gear which appears the last three years.

The Spanish pelagic seine fleet is 6% of the effort in 2012.

Information on the nominal effort of the specific condition SBCIIIART5 is given in Tables 5.10.1.2, 5.10.1.7 and 5.10.1.8. As mentioned above, data broken down following this specific condition were only provided for 2010-2012 period for French vessels and since 2006 for Belgian vessels, introducing a shift for the main gear type from the “none” category to the specon “SBCIIIART5”. The specon “SBCIIART5” was not provided for Spanish data. Following these considerations, no firm conclusion could be drawn based on the figures 5.10.1.6 presented below.

As a quality check, STECF routinely compares the data currently submitted with the data submitted during the previous year, as is displayed in Table 5.10.1.4. Compared to the data submitted in 2011, no differences appear between the two data sets.

Table 5.10.1.1 – Bay of Biscay – 8a - Trend in nominal effort (kW\*days at sea) by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2000-2012. Derogations are sorted by gear, special condition (SPECON), and country (o. 10m length vessels). Data qualities are summarised in Section 4 of the report.

| REG AREA COD  | REG GEAR COD     | SPECON            | COUNTRY      | 2000             | 2001             | 2002              | 2003             | 2004              | 2005              | 2006              | 2007              | 2008              | 2009              | 2010             | 2011             | 2012             |

Table 5.10.1.3 – Bay of Biscay – 8a – Percentage difference in effort (kW\*days at sea) by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2000-2011 between the data provided in 2012 and 2013. Derogations are sorted by gear, special condition (SPECON), and country (o. 10m length vessels). Data qualities are summarised in Section 4 of the report.

Table 5.10.1.4 – Bay of Biscay – 8b – Percentage difference in effort (kW\*days at sea) by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2000-2011 between the data provided in 2012 and 2013. Derogations are sorted by gear, special condition (SPECON), and country (o. 10m length vessels). Data qualities are summarised in Section 4 of the report.

Figures 5.10.1.5 – Bay of Biscay – 8a -Trend in nominal effort (kW\*days at sea) sorted by gear for unregulated (without special condition SBcIIIart5) and regulated gears (with special condition SBcIIIart5) by derogations stated in article 5 of Coun. Reg. 388/2006, 2003-2012. Data qualities are summarised in section 4 of the report.

Figures 5.10.1.6 – Bay of Biscay – 8b -Trend in nominal effort (kW\*days at sea) sorted by gear for unregulated (without special condition SBcIIIart5) and regulated gears (with special condition SBcIIIart5) by derogations stated in article 5 of Coun. Reg. 388/2006, 2003-2012. Data qualities are summarised in section 4 of the report.

Information on GT\*days at sea and the number of vessels active in the Bay of Biscay are also presented below in this report by ICES division 8a and 8b.

Table 5.10.1.9 – Bay of Biscay – 8a - Trend in GT\*days at sea by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2000-2012. Derogations are sorted by gear, special condition (SPECON), and country. Data qualities are summarised in Section 4 of the report.

| REG AREA COD  | REG GEAR COD     | SPECON           | COUNTRY      | 2000             | 2001             | 2002             | 2003             | 2004             | 2005             | 2006             | 2007             | 2008             | 2009             | 2010             | 2011             | 2012             |

### 5.10.2 ToR 1.b Fishing capacity in GT of relevant vessels by Member State and fisheries

Fishing capacity in GT is only available for Belgian vessels since 2003 consequently trend in fishing capacity GT is only represented for the Belgium beam trawl fleet. STECF 13-06 observed a relative stability of Fishing capacity on the period for these fleet in the two ICES division 8a and 8b.

STECF 13-06 noted that fishing capacity was provided by Spain in 2012 in GT and for French in 2012 but in kW as this field is asked as kW or GT depending of the area and then as difficulties to be filled in.

Table 5.10.2.1 – Bay of Biscay 8a - Trend in Fishing capacity (GT) concerned by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2000-2012. Derogations are sorted by gear, special condition (SPECON), and country. Data qualities are summarised in Section 4 of the report.

### 5.10.3 ToR 1.c Catches (landings and discards) of common sole in weight and numbers at age by fisheries

The following section provides quantities of sole landings by fisheries for the ICES division 8a and 8b. Discard estimates are scarce. Discards estimates available are presented below with their coverage index. They have been most calculated only for Belgium beam trawl fleet since 2009 until 2011. No discards estimates are available in 2012. Some discards estimates have been calculated for 2010 and 2011 for other fleets but presented commonly bad coverage index and are, as well, dubious in some cases. So care is required in the use of these data to draw firm conclusions about catch composition.

Apart from the Belgium beam trawl fleet (2% of the catches in 8a and 20% in 8b) almost all sole landings are French. Spanish fleets have few sole landings. The main French fleets involve in common sole catches in 8a are the trammel net fleet (62%, increasing on the period), the otter trawl fleet (34% in 2012, stable on the period), and the gill net fleet (2%, decreasing on the period). The main French fleets involve in common sole catches in 8b are the trammel net fleet (60%, increasing on the period), the otter trawl fleet (16%, stable on the period) and the gill net fleet (2%, decreasing on the period).

The catches (landings and discards) of sole in weight and numbers at age by fisheries are scarce and are almost available only for Belgium beam trawl fleet on the period. This information could be finding in the appendixes.

Table 5.10.3.1 – Bay of Biscay – 8a - Trend in total landings (t) for common sole for vessels concerned by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2003-2012. Derogations are sorted by gear. Data qualities are summarised in Section 4 of the report.

Table 5.10.3.5 – Bay of Biscay – 8a - Trend in total landings (t) and discards (t) for common sole (SOL) for vessels concerned by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2003-2012. Derogations are sorted by gear, special conditions (SPECON) and country. Data qualities are summarised in Section 9 of the report.

#### 5.10.4 ToR 1.c Catches (landings and discards) of non-sole species in weight and numbers at age by fisheries

The following section provides quantities of associated species of common sole landings by fisheries for the ICES division 8a and 8b. Discard estimates are scarce. Discards estimates available are presented below with their coverage index. They have been most calculated only for Belgium beam trawl fleet since 2009 until 2012. Some discards estimates have been calculated for 2010 and 2011 for other fleets but presented commonly bad coverage index and are, as well, dubious in some cases. So care is required in the use of these data to draw firm conclusions about catch composition.

Some tables presented below have not been revised at this time; until it more information could be found in the appendixes.

Table 5.10.4.1 – Bay of Biscay – 8a - Trend in total landings (t) for major associated species of common sole for vessels concerned by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2003-2012. Derogations are sorted by gear. Data qualities are summarised in Section 4 of the report.

Table 5.10.4.2 – Bay of Biscay – 8a – Discards estimates (t) and their coverage index for major associated species of common sole for vessels concerned by existing derogations stated in article 5 of Coun. Reg. 388/2006 and Member State, 2003-2012. Derogations are sorted by gear and SPECON. Data qualities are summarised in Section 4 of the report.

The following section provides figures about quantities of sole and other major associated species' landings by fisheries. Discard estimates are scarce. They have been most calculated only for Belgium beam trawl fleet since 2009 until 2012 (2011 for sole). Some discards estimates have been calculated for 2010 and 2011 for other fleets but presented commonly bad coverage index and are, as well, dubious in some cases. So care is required in the use of these data to draw firm conclusions about catch composition. STECF 13-06 notes that information collected on discards is incomplete, so the apparent absence of discards in the figures for a given species/gear does not necessarily mean zero discards.

Fig. 5.10.4.1 – Bay of Biscay – 8a - Trend in total landings and discards estimates (t) for common sole and major associated species for vessels concerned by existing derogations stated in article 5 of Coun. Reg. 388/2006, 2003-2012. Derogations are sorted by gear. Note that information collected on discards is incomplete, so the apparent absence of discards in the figures for a given species/gear does not necessarily mean zero discards. Data qualities are summarised in Section 4 of the report.

Tables 5.10.4.1-4 listing landings and discards by major species and fisheries 2003-2011 were not updated due to time constraints. The updates will be conducted during the forthcoming STECF EWG 13-13 fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy) .

### 5.10.5 ToR 2 Information on small boats (<10m)

Some tables presented below have not been revised at this time; until it more information could be found in the appendixes.

#### 5.10.5.1 Fishing effort of small boats by Member State

An overview of the fishing effort of small boats by Member State, gear for the ICES division 8a and 8b is presented below. Comparison with the large vessels (>10m) is, as well, proposed.

Almost all effort of small boats is French. No Spanish nor Belgium data are available for small boats.

Small boats represent, the last three years, almost 20% of the effort deployed by the large vessels in 8a and 10% in 8b. Relative stability is observed for the last three years. Main fleets involved in 8a are the longline fleet, the pots fleet, the gill and trammel net fleets and the otter trawl fleet. In 8b, the main fleets are the gill and trammel net fleets, the longline fleet and the pots fleet.

The effort data available for small boats before 2010 seem to be incomplete and the “none” gear category represent a large part of this effort. So care is required in the use of these data to draw firm conclusions about trends of effort of small boats before 2010.

Table 5.10.5.1.1 – Bay of Biscay – 8a – Overview of fishing effort in kW\*days by fisheries for vessels <10m, comparison with the vessels >=10m, 2003- 2012.

Figure 5.10.5.1.2 – Bay of Biscay – 8b – Overview of fishing effort in kW\*days by <10m and >=10m vessels, 2003- 2012.

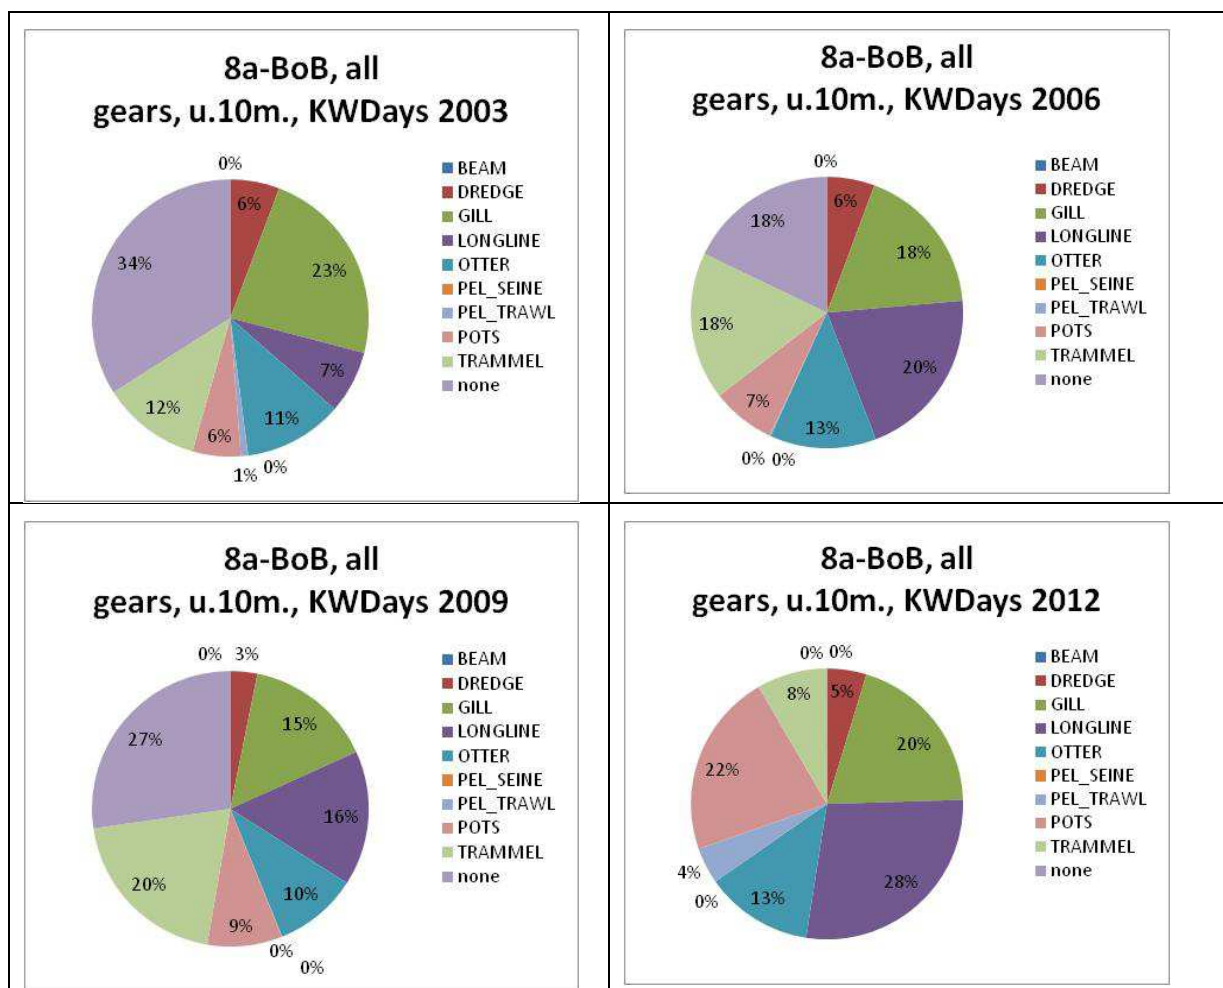

Figure 5.10.5.1.3 Bay of Biscay – 8a, Trend in the distribution per gear of the nominal effort (KWDays) for vessels <10m., 2003, 2006, 2009 and 2012.

Figure 5.10.5.1.4 Bay of Biscay – 8b, Trend in the distribution per gear of the nominal effort (KWDays) for vessels <10m., 2003, 2006, 2009 and 2012.

Tables 5.10.6.1.2-3 listing trends in nominal effort (kW\*days at sea) for vessels <10m by Member State sorted by gear and special condition (SPECON) 2003-2011 were not updated due to time constraints. The updates will be conducted during the forthcoming STECF EWG 13-13 fishing effort regime evaluations part 2 (7-11 October 2013, Barza d’Ispra, Italy).

#### 5.10.5.2 Catches (landings and discards) of sole and associated species by small boats by Member State

An overview of the landings of sole and associated species of small boats by Member State, gear for the ICES division 8a and 8b is presented below. Comparison with the large vessels (>10m) is, as well, proposed.

Almost all landings of sole of small boats are French. No Spanish nor Belgium data are available for small boats.

Small boats represent the last three years almost 15% of the total landings of sole of the large vessels in 8a and 2% in 8b. Main fleets contributing to these catches in 8a are the gill and

trammel net fleets and the otter trawl fleet. In 8b, the main fleets are the gill and trammel net fleets.

The landings data available for small boats before 2010 seem to be incomplete and the “none” gear category represent a large part of this effort. So care is required in the use of these data to draw firm conclusions about trends of landings of small boats before 2010.

Table 5.10.5.2.1 – Bay of Biscay – 8a– Overview of landings (t) of sole and associated species sorted by gear, for vessels <10m, compare with vessels >=10m, 2003- 2012.

Tables 5.10.6.1.2-3 listing trends in landings for vessels <10m by Member State sorted by gear and special condition (SPECON) 2003-2011 were not updated due to time constraints. The updates will be conducted during the forthcoming STECF EWG 13-13 fishing effort regime evaluations part 2 (7-11 October 2013, Barza d'Ispra, Italy).

### *5.10.6 ToR 3 Spatio-temporal patterns in effective effort by fisheries*

Figures 5.10.6.1 to 5.10.6.11 show the spatial distribution of the effective fishing effort for all the different fisheries operating in the Bay of Biscay during the period 2003 to 2012. The pattern seems similar for the whole period for most of the fleets.

The effort is mostly distributed all across the gulf with somewhat higher values close to the estuaries (Gironde, baie de vilaine).

For trammel and otter, that are the two fisheries for which the effort increased between 2003 and 2007, the spatial effort allocation seems to follow the same trends, starting mainly in south Brittany and increasing in all the area in the following years.

The demersal seine fishery started in 2009 and increased since 2010.

Spanish fleets, included in the 2012 figures, operate mainly in the >12milles' ICES rectangles.

#### *5.10.7 ToR 4 Comments on data quality and any unexpected evolutions of the trends in catches and effort by Member State and fisheries*

No further comment, see sections before where comments on data quality and any unexpected evolutions of the trends in catches and effort by Member State and fisheries have been made.

#### *5.10.8 ToR 5 Correlation between partial sole mortality and fishing effort by Member State and fisheries*

Fisheries specific data are broken down considering the specific condition SBCIIIART5 which is only provided for 2010 -2012 for French vessels and since 2006 for Belgian vessels, introducing a shift for the main gear type from the “none” category to the SPECON “SBCIIIART5” (Tables 5.10.8.1-2).

Discard estimates are scarce (information collected on discards is incomplete) and have been dubious in certain cases. Therefore, only landings are correlated against the fisheries specific fishing effort.

The STECF EWG 13-06 has estimated partial fishing mortalities of stock of Bay of Biscay sole for all identified regulated and non-regulated gear groups by Member States and correlated them against fishing effort. The major fisheries are presented below (Tables 5.10.8.1-2). The presented parameters  $r$  (value of Pearson’s coefficient of correlation) as well as a  $p$  value to quantify the statistical significance ( $\leq 0.05$ ) allows conclusions about the quality of the correlation between the partial  $F$  and fisheries specific fishing effort.

Recently the listed fisheries in areas 8a and 8b together do contribute by more than 75% to the total fishing mortality. The relevant fisheries are the beam trawl fishery by Belgium and the gill net, trammel net and otter trawl fisheries by France.

STECF EWG 13-06 notes that the correlations between the summed partial  $F$ s for landings of the major fisheries and their estimated fishing efforts are significant in area 8a but insignificant in area 8b. As the analyses do not include discards and the time series lack Spanish fisheries, STECF EWG 13-06 does not further interpret the fisheries specific correlations between partial  $F$  and fishing effort.

Table 5.10.8.1 Bay of Biscay sole area ICES Div. 8a. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 sole assessment, while the lower left part lists partial Fs for landings of fisheries using major gears, specon assigns the licensed part of the fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock. Note that Spanish data are only available for 2012.

| 2007 F reduction by 20 percent, 2010 F reduction by 15%, until F<0.27, Fmsy=0.26 |           |           |          | Effort kW days running previous year baseline |       |       |       |       |       |       |       |       |       |                  |          |           |          |          |          |          |          |          |          |          |        |       |    |  |  |

Table 5.10.8.2 Bay of Biscay sole area ICES Div. 8b. The upper left part of the table lists estimated F trajectories from the management plan and the ICES 2013 sole assessment, while the lower left part lists partial Fs for landings of fisheries using major gears, specon assigns the licensed part of the fisheries. The right part of the table lists the respective trends in fishing effort (kW days at sea) as well as the correlation parameters between the partial Fs and the fisheries specific fishing effort. A complete set of all partial Fs of fisheries is downloadable from the meeting's internet site. The ratio of the sum of Fpar/F indicates the relative contribution of the partial Fs of all effort regulated gears to the overall F estimate of the stock. Note that Spanish data are only available for 2012.

| 2007 F reduction by 20 percent, 2010 F reduction by 15%, until F<0.27, Fmsy=0.26 |                            |       |       |       |       |       |       |       |       |       |       | Effort kW days running previous year baseline |         |         |          |          |         |         |         |         |         |           |       |       |       |         |

<sup>1</sup> - Information on STECF members and invited experts' affiliations is displayed for information only. In some instances the details given below for STECF members may differ from that provided in Commission COMMISSION DECISION of 27 October 2010 on the appointment of members of the STECF (2010/C 292/04) as some members' employment details may have changed or have been subject to organisational changes in their main place of employment. In any case, as outlined in Article 13 of the Commission Decision (2005/629/EU and 2010/74/EU) on STECF, Members of the STECF, invited experts, and JRC experts shall act independently of Member States or stakeholders. In the context of the STECF work, the committee members and other experts do not represent the institutions/bodies they are affiliated to in their daily jobs. STECF members and invited experts make

declarations of commitment (yearly for STECF members) to act independently in the public interest of the European Union. STECF members and experts also declare at each meeting of the STECF and of its Expert Working Groups any specific interest which might be considered prejudicial to their independence in relation to specific items on the agenda. These declarations are displayed on the public meeting's website if experts explicitly authorized the JRC to do so in accordance with EU legislation on the protection of personnel data. For more information: <https://stecf.jrc.ec.europa.eu/adm-declarations> and <http://stecf.jrc.ec.europa.eu/web/stecf/about-stecf/cv> .

## **8 LIST OF BACKGROUND DOCUMENTS**

Background documents are published on the meeting's web site on:

<http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306>

List of background documents:

#### Abstract

STECF notes that it has extensively addressed the ToR regarding the requested fishing effort regime evaluations in the

1. Eastern and Western Baltic,
2. the Kattegat,
3. the Skagerrak, North Sea, European waters in ICES Div.2 and the Eastern Channel,
4. to the West of Scotland,
5. Irish Sea,
6. Celtic Sea,
7. Atlantic waters off the Iberian Peninsula,
8. Western Channel,
9. Western Waters and Deep Sea
10. and the Bay of Biscay,

i.e. updated estimates of trends in fishing effort, landings and discards by species, CPUE and LPUE by fisheries and species, and partial fishing mortalities for effort regulated and non-regulated fisheries by Member States. Few ToR could not be accomplished due to time constraints and/or data deficiencies and will be accomplished during the forthcoming STECF EWG 13-13 fishing effort regime evaluations part 2 (7-11 October 2013, Barza d’Ispra, Italy). It is noted that compilations of fisheries specific data by fishing effort management regime and Member State are provided as electronic appendixes and can be downloaded at <http://stecf.jrc.ec.europa.eu/web/stecf/ewg1306> in order to facilitate transparent dissemination of the information and further use.

Due to the complexity of the fisheries information provided, interested users are advised to consult the data quality notes and data notations provided in the present report.

## **How to obtain EU publications**

Our priced publications are available from EU Bookshop (<http://bookshop.europa.eu>), where you can place an order with the sales agent of your choice.

The Publications Office has a worldwide network of sales agents. You can obtain their contact details by sending a fax to (352) 29 29-42758.

As the Commission's in-house science service, the Joint Research Centre's mission is to provide EU policies with independent, evidence-based scientific and technical support throughout the whole policy cycle.

Working in close cooperation with policy Directorates-General, the JRC addresses key societal challenges while stimulating innovation through developing new standards, methods and tools, and sharing and transferring its know-how to the Member States and international community.

Key policy areas include: environment and climate change; energy and transport; agriculture and food security; health and consumer protection; information society and digital agenda; safety and security including nuclear; all supported through a cross-cutting and multi-disciplinary approach.

---

The Scientific, Technical and Economic Committee for Fisheries (STECF) has been established by the European Commission. The STECF is being consulted at regular intervals on matters pertaining to the conservation and management of living aquatic resources, including biological, economic, environmental, social and technical considerations.
