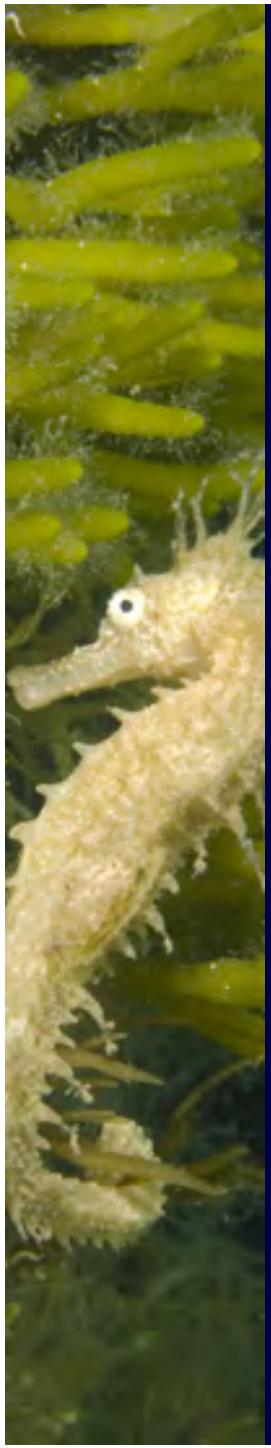
Univ. Saarland, DE (Vordiplom Chemie)	1987 – 1990	BSc general chemistry
EHICS, FR (Diplôme d'Ingénieur)	1990 - 1993	Chemical engineering Specialisation analytical chemistry
Robert Gordon Univ. Aberdeen, UK (PhD)	1993 - 1998	Chemical contaminants marine environment
Marine Laboratory phycotoxins	1998 - 2001	Team leader,
Marine Institue, IE phycotoxins	2001 - 2008	Team leader,
Ifremer, FR	2008 – 2010	Head of Dept. Environnement Microbiology & Phycotoxins



Academic achievements & activities

- ✓ Over 40 peer-reviewed publications, > 130 scientific contributions
- ✓ (Co-)supervision of 1 postdoc, 4 PhD, 2 MSc and 23 undergraduate students completed, 2 PhDs ongoing
- ✓ 9 multi-disciplinary projects managed in 10 years
- ✓ Co-organised 4 intl. conferences, 12 natl. workshops
- ✓ Expertise for many natl. & intl. food safety organisations (EFSA, ECVAM, FAO/IOC/WHO, AOAC, ANSES, QUASIMEME, MSSC, FSAI, UK-COT, FSA-UK, FSA-Scotland)
- ✓ Editorial board member of “Marine Drugs”

Certification – LC-MS/MS

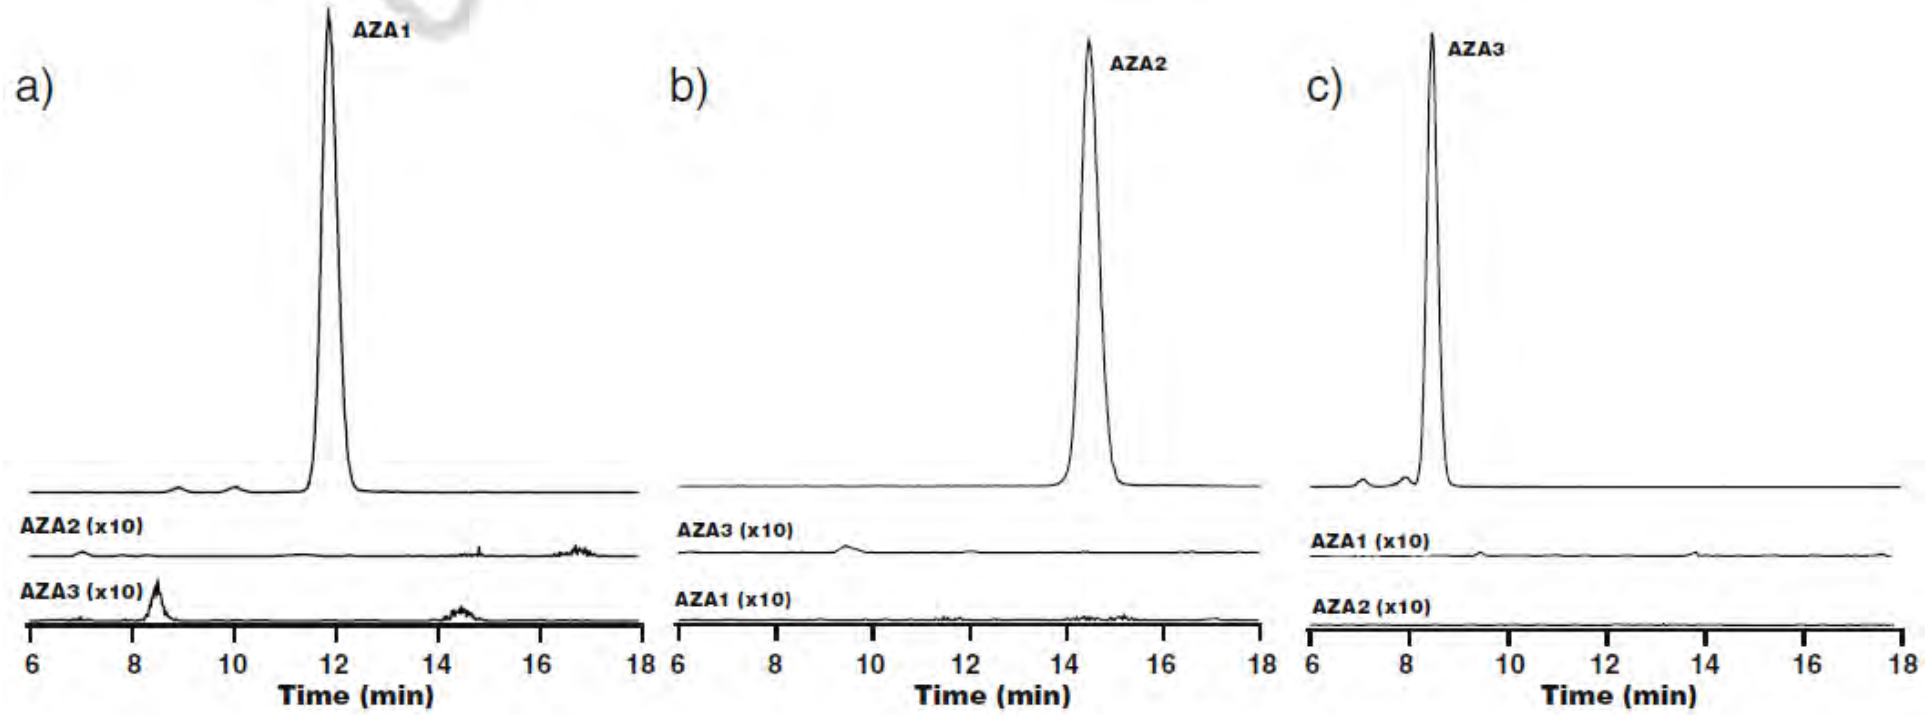

Fig. 4 LC-MS analysis of NRC CRM-AZA1 (**a**), -AZA2 (**b**) and -AZA3 (**c**) using MRM at *m/z* 842.5>672.5, 856.5>672.5 and 828.5>658.5, respectively. The three MRM transitions were monitored in all three CRMs to assess potential contamination from other AZAs in the CRMs

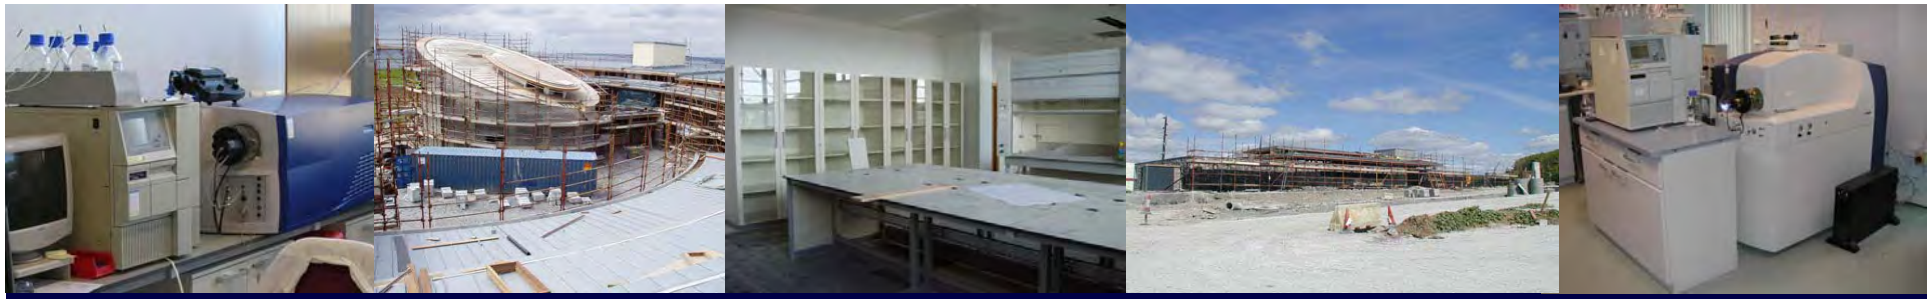
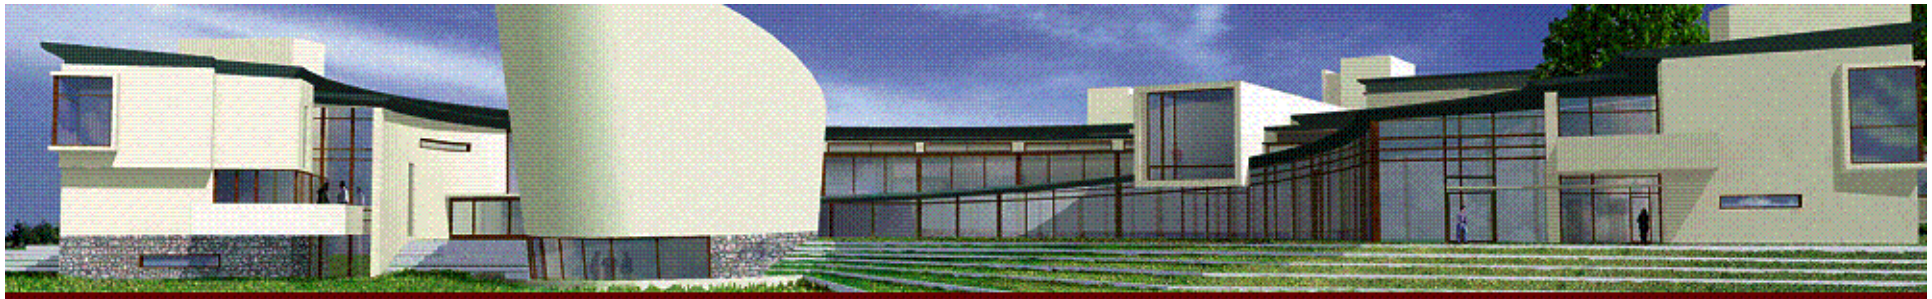
Perez R., Rehmann N., Crain S., LeBlanc P., Craft C., MacKinnon S., Reeves K., Burton I.W., Walter J.A., Hess P., Quilliam M.A. and Melanson J.E. (2010) The preparation of certified calibration solutions for azaspiracid 1, -2 and -3, potent marine biotoxins found in shellfish. Accepted for publication in Analytical and Bioanalytical Chemistry on 22-08-2010.



Operational Estimate of AZA1-use by LC-MS

If 50 laboratories use 10 μg per year

- ↳ 500 μg per year total consumption
- ↳ 2.5 mg / 500 μg = 5 years
- ↳ Current AZA-1 is used up < 5 years



QC-Tools: Tissue Reference Materials

A. Laboratory reference materials (LRMs)

- **Method validation (precision)**
- **Routine QC**

B. Interlaboratory RMs (ILRMs)

- **Intercomparison exercises**
- **Proficiency testing**

C. Certified reference material (CRMs)

- **Method validation (accuracy)**
- **Calibration**

Optimised procedure for wet in-house LRMs

Production of a RM for Shellfish Toxins

LRM Design
(shellfish species, bulk amount and portion size, toxin profile, concentrations, anticipated duration of use)

Gentle Heat Treatment
(e.g. steaming for 10 min., facilitates opening of shells and prevents enzymatic degradations)

Initial Blending
(e.g. household or Waring blender, mincing of streaky shellfish tissues)

Adjustment of water content to ca. 85 %
Addition of antioxidant and antibiotics

Fluidising
(UltraTurrax or Polytron
remove heavy particles, sand and broken shells)

Dispensing
(pre-labelled containers, peristaltic pump speeds up process, sample must be mixed/stirred during process)

Purging + Sealing of Containers
(argon or nitrogen purge, aluminium lids heat-sealed onto polypropylene vials, MK-1)

Frozen Storage
(e.g. box in chest freezer, -20 °C)

Characterisation
(homogeneity and stability testing)

SOP#: BCT-58

Hess P., McCarron P., Quilliam M.A. (2007) Fit-for-purpose Shellfish Reference Materials for Phycotoxins in Internal and External Quality Control. ***Anal. Bioanal. Chem.* 387, 2463-2474.**

Procedure for freeze-dried RMs @

Freeze drying

KFT (2.5-4%)

Crushing

Ball milling

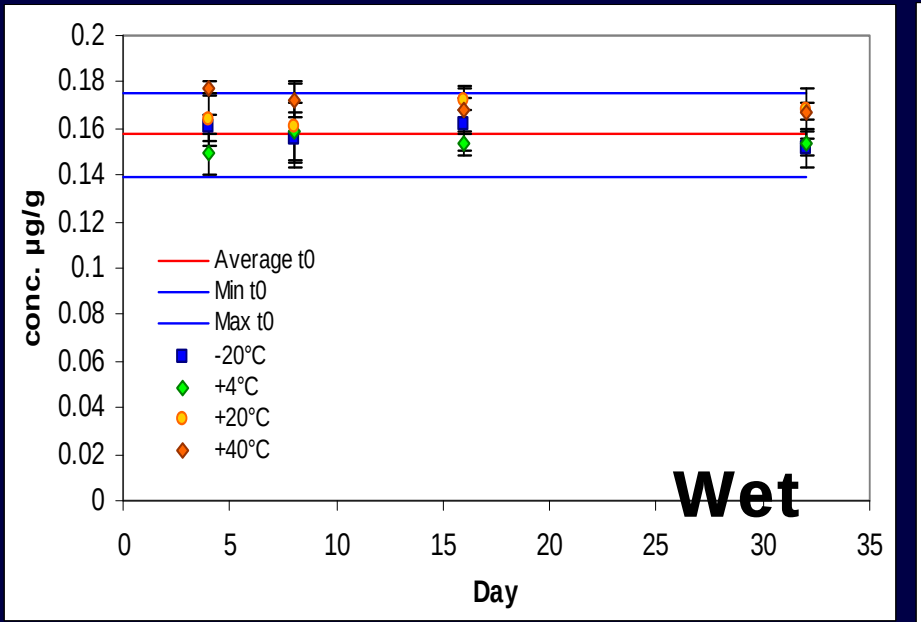
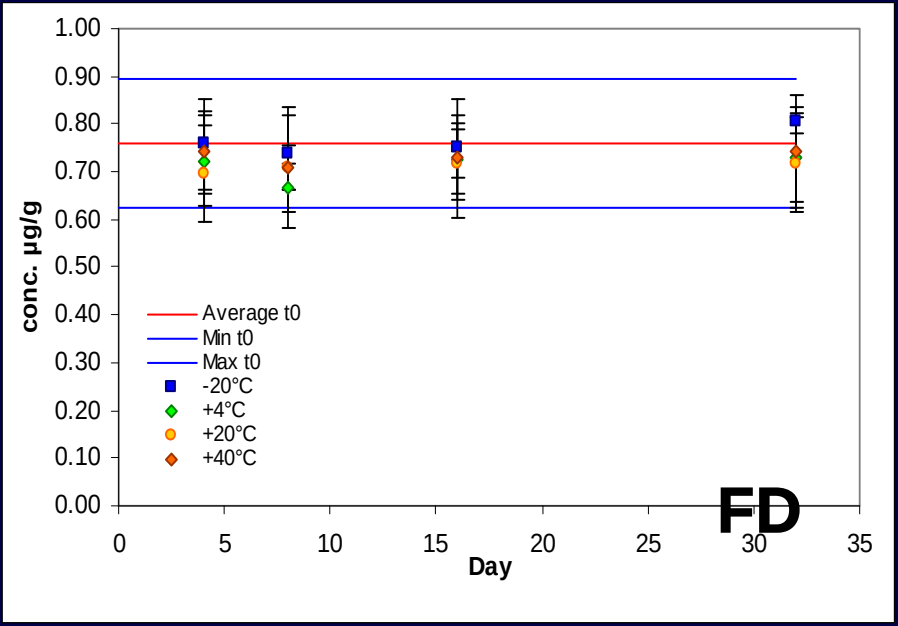
- **Good homogeneity**
- **Higher RSD due to LC-MS method used**

Azaspiracid 1 in wet and freeze dried

AZA short termstability studies

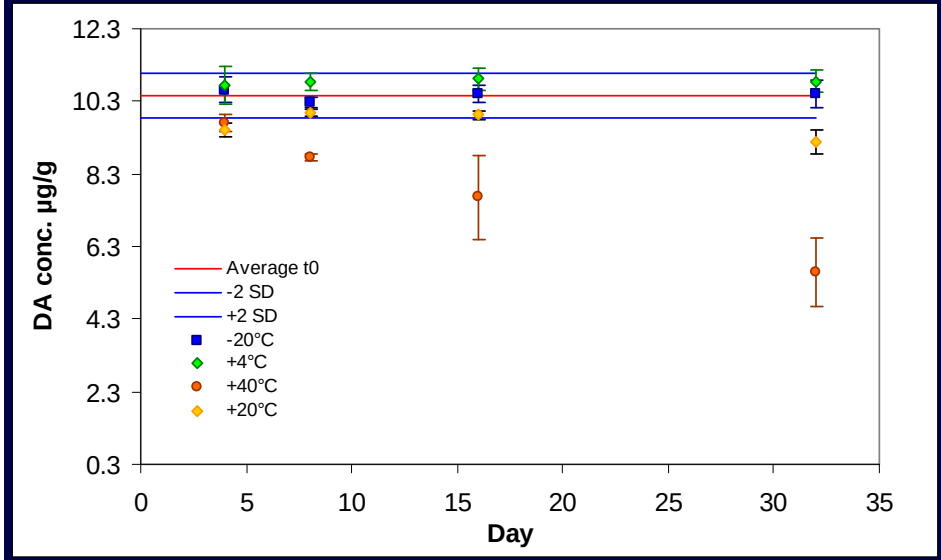


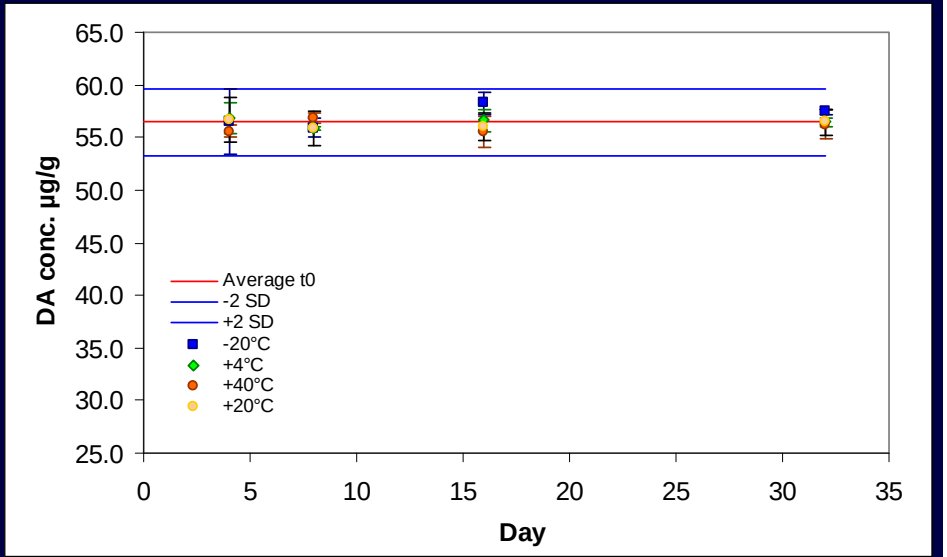


- **AZA-1 stable in both materials over short term**
- **AZA-2 stable over short term (data not shown)**
- **AZA-3 unstable in both materials (data not shown)**

DA short term stability studies

Wet vs freeze-dried

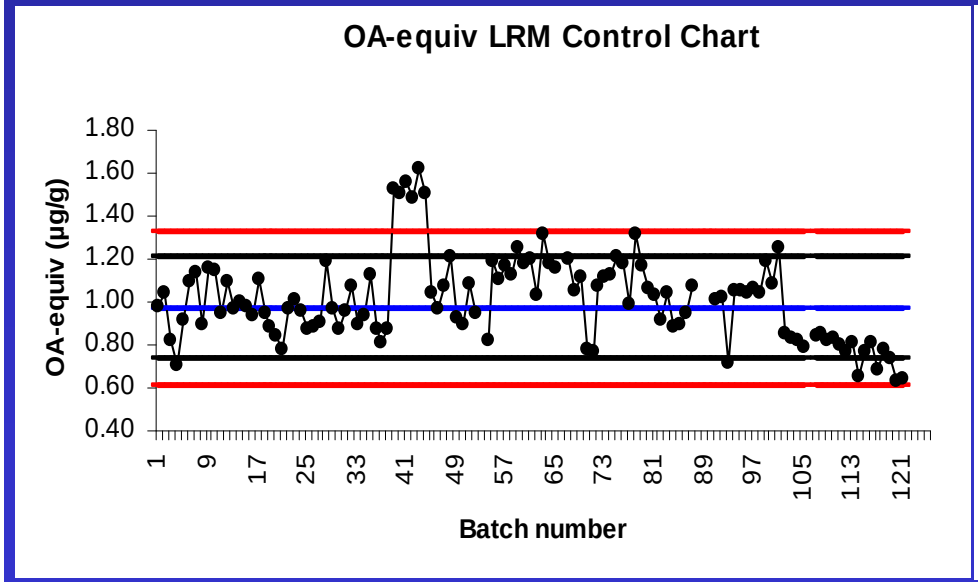


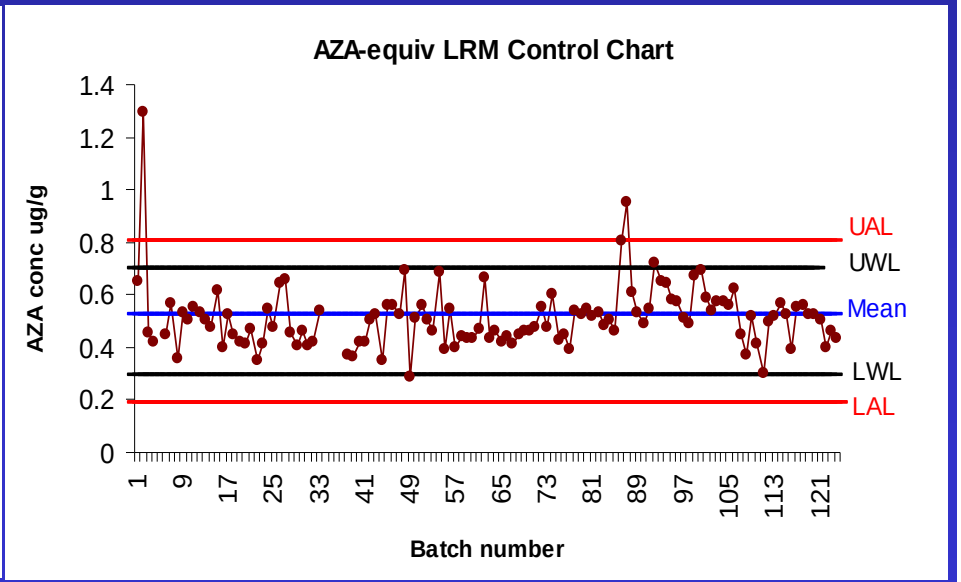


- No degradation of DA detected in wet RM at –20°C or +4°C
- Degradation of DA at higher temperatures in wet RM
- No degradation of DA at any temperature in freeze-dried RM

Overview of materials prepared

- A total of 18 OA/AZA RMs prepared
- Materials have been used for a variety of applications:
  - Single Laboratory Validation
  - Proficiency Testing
  - Interlab/Collaborative studies (12 BIOTC
  - Feasibility of CRM production





Wet Shellfish Tissue Test Materials for Proficiency Testing

				Homogeneity	Stability

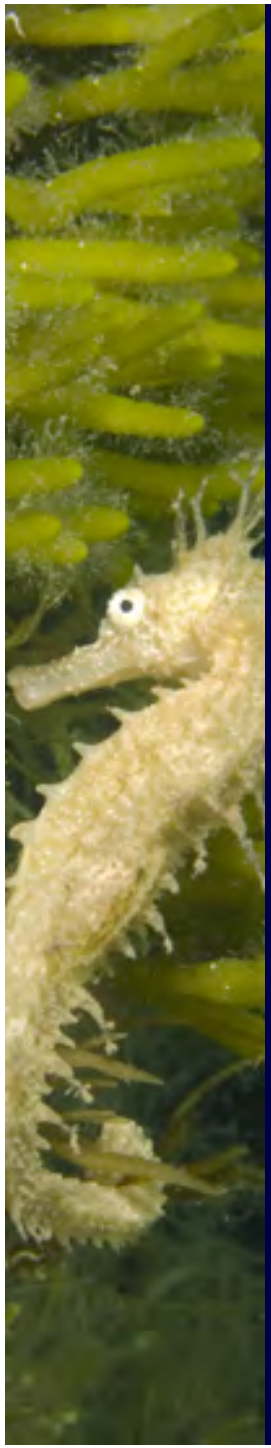
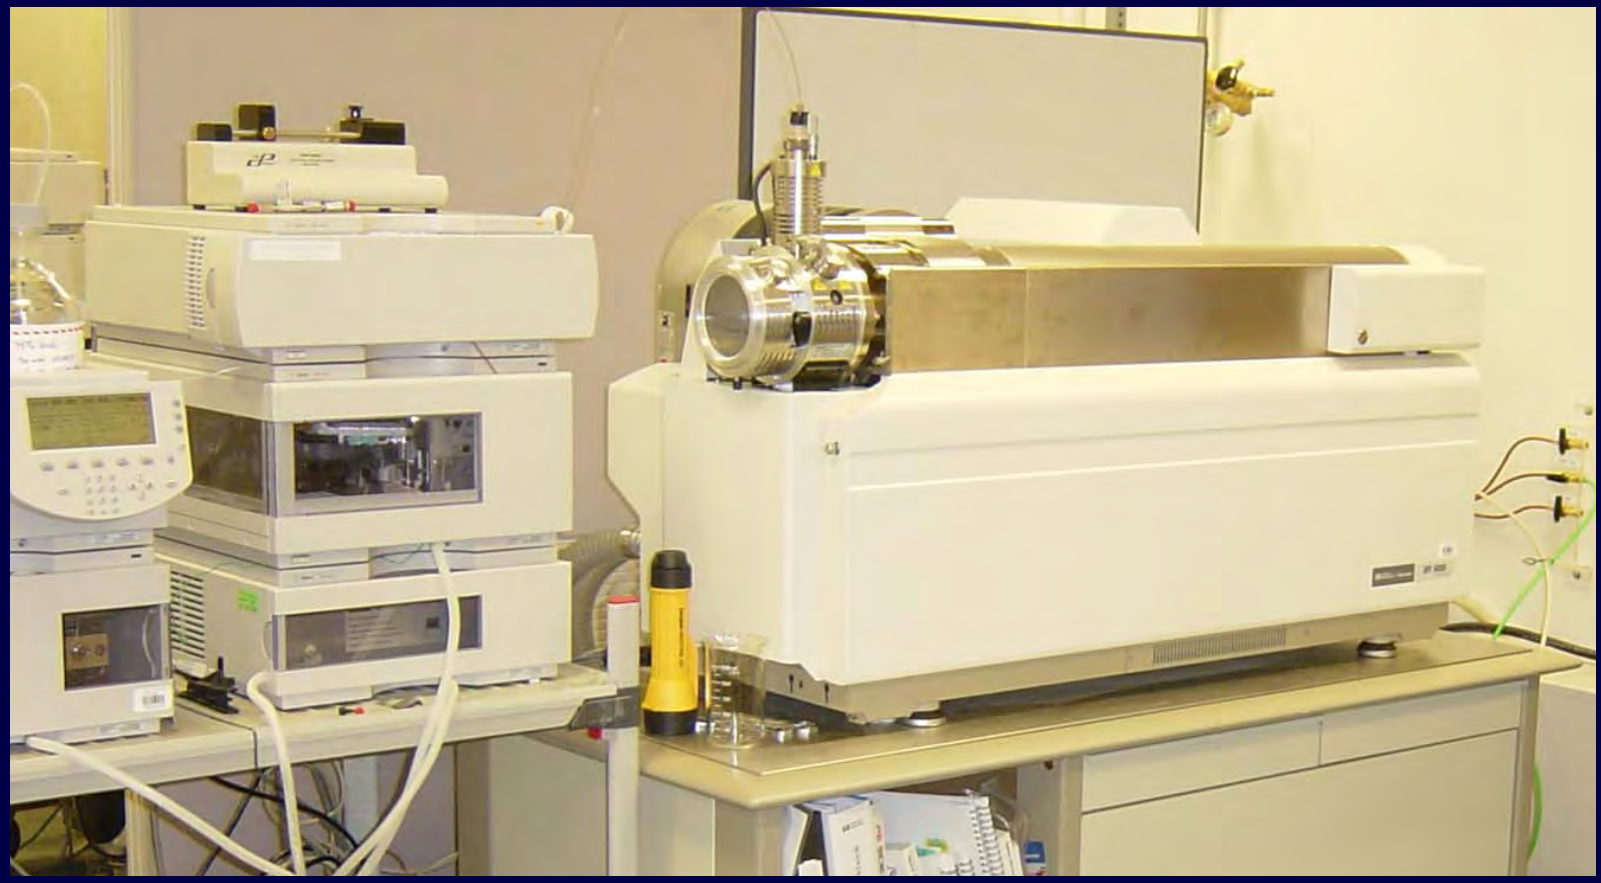
Biological detection methods



Physico-chemical analytical Methods



MBA for AZAs –

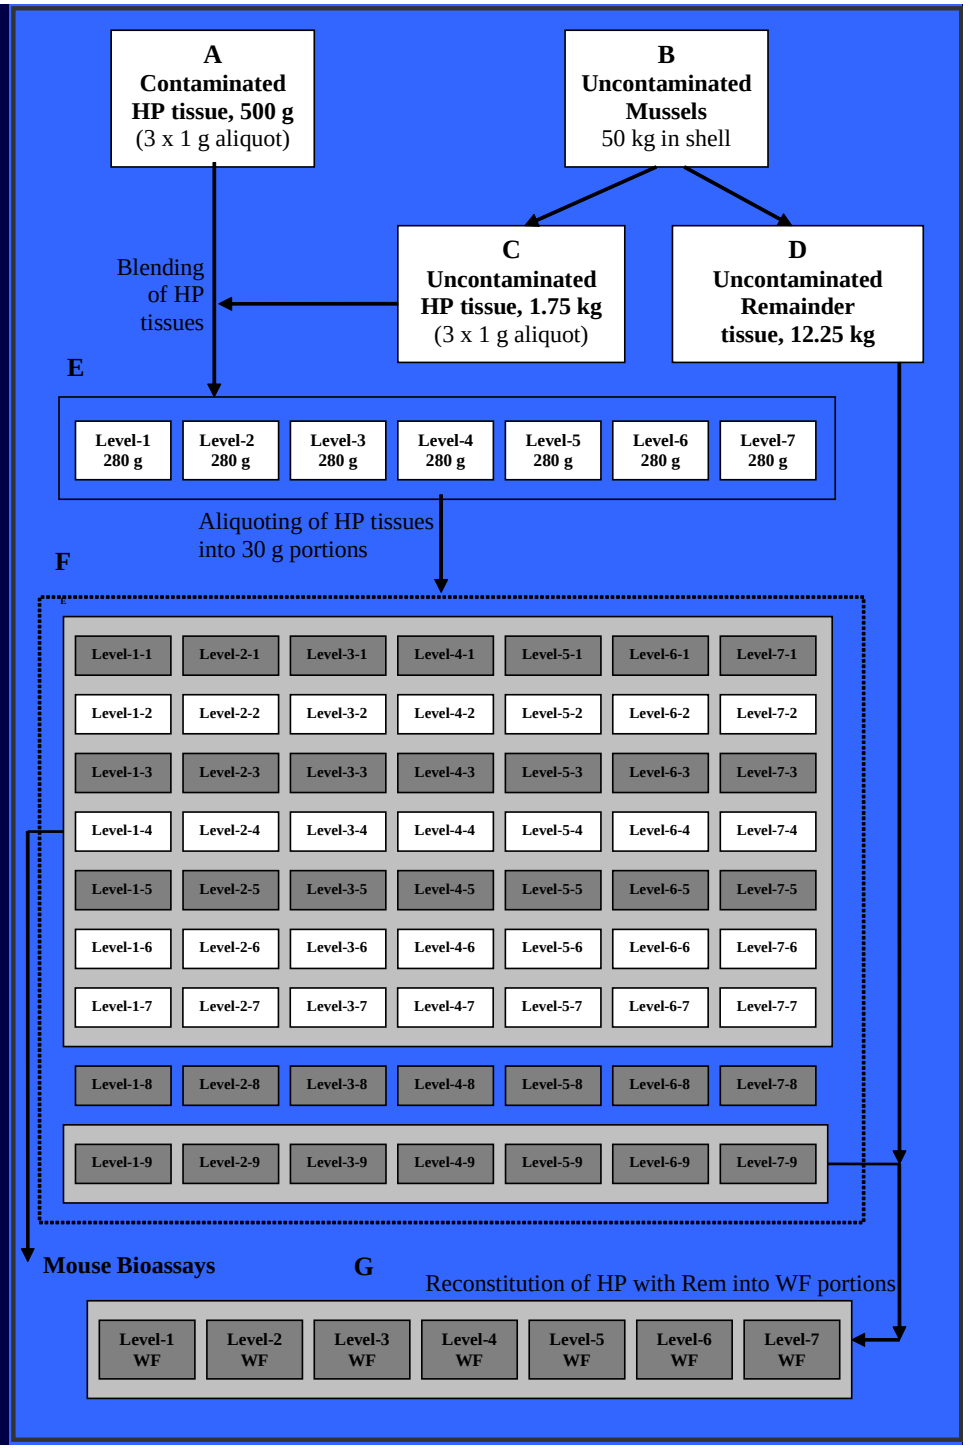
Study design

Tissue dissections and mixtures

Tissue A:
Mussels from southwest Ireland
Autumn 2007, AZA-only event

Tissue B:
Mussels from east coast of Ireland
Typically AZA-"free" production zone

Hess et al., *Toxicon* 2009, 53, 713-722.



Homogeneity

Table 1. Homogeneity study. Relative standard deviations (RSDs) in [%], n=5.

Level	1	2	3	4	5	6	7
RSD	n/a*	3.5	1.8	5.2	6.6	4.0	4.6

*n/a = RSD is not applicable where concentrations were not quantifyable

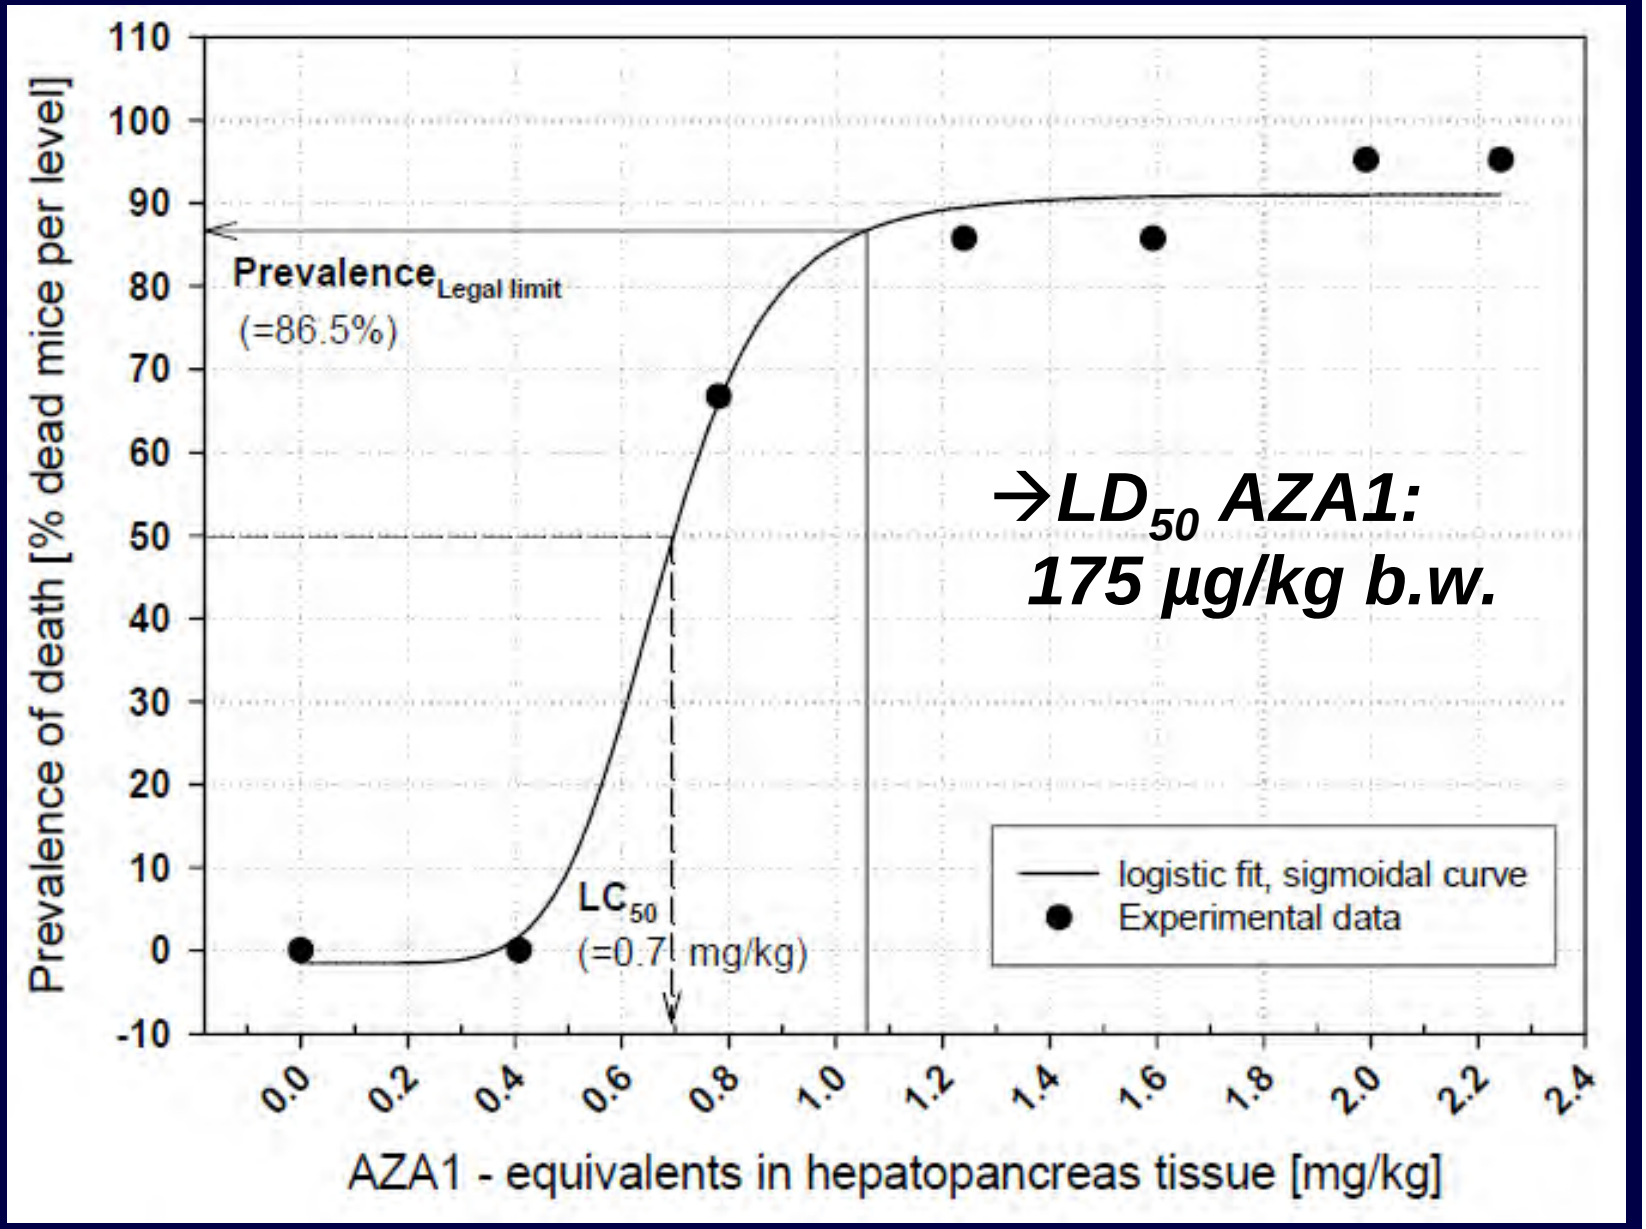
Accuracy of assigned values

Table 2. AZA1-equivalents determined in mussel hepatopancreas (HP) and whole flesh (WF) homogenates. All concentrations expressed in whole flesh AZA1-equivalents [mg/kg]*, n=3. Sample-to-solvent ratios were 1 : 62.5 (diluted HP extracts), 1 : 12.5 (crude HP extracts) and 1 : 12.5 (WF extracts).

Level	1	2	3	4	5	6	7
AZA1-Equiv. (dilute HP extracts)	**<LOQ**	**0.06**	**0.12**	**0.19**	**0.24**	**0.30**	**0.34**
AZA1-Equiv. (crude HP extracts)	<LOQ	0.05	0.09	0.13	0.17	0.20	0.23
AZA1-Equiv. (reconst. WF extracts)	<LOQ	0.06	0.11	0.15	0.19	0.26	0.32

*An average HP content of 15.25% was used for transformation of the AZA1-equivalents determined in HP into whole flesh equivalents. As the reconstituted whole flesh samples had an actual HP content of 20%, the concentrations were also back-calculated to reflect the average HP content of 15.25%.

Concentration – lethality response curve



Mouse Bioassay
Detection Capability expressed as Probability of Detection of Positive at regulatory limit

Table 5. Calculation of the probability (Pr) of a positive (pos) or negative (neg) mouse bioassay for shellfish at the current regulatory limit (0.16 mg/kg). A mouse bioassay is positive when 2 or 3 mice are dead after 24 h observation.

mouse	mouse	mouse	Pr of individual			Pr (scenario)		
1	2	3	mouse to live or die					
dead	dead	dead	0.865	0.865	0.865	0.647		
dead	dead	alive	0.865	0.865	0.135	0.101		
dead	alive	dead	0.865	0.135	0.865	0.101		
alive	dead	dead	0.135	0.865	0.865	0.101	Pr(pos)	0.95
dead	alive	alive	0.865	0.135	0.135	0.016		
alive	dead	alive	0.135	0.865	0.135	0.016		
alive	alive	dead	0.135	0.135	0.865	0.016		
alive	alive	alive	0.135	0.135	0.135	0.002	Pr(neg)	0.05
					Total	1.00		

@ RL of 80 µg/kg, the probability of detecting a positive decreases to 5% !

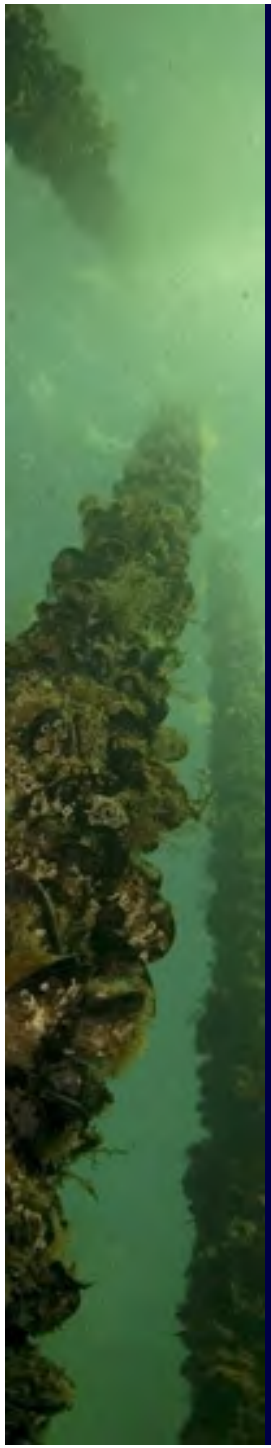
SCIENTIFIC OPINION

Marine biotoxins in shellfish – Summary on regulated marine biotoxins[1]

Scientific Opinion of the Panel on Contaminants in the Food Chain

(Question No EFSA-Q-2009-00685)

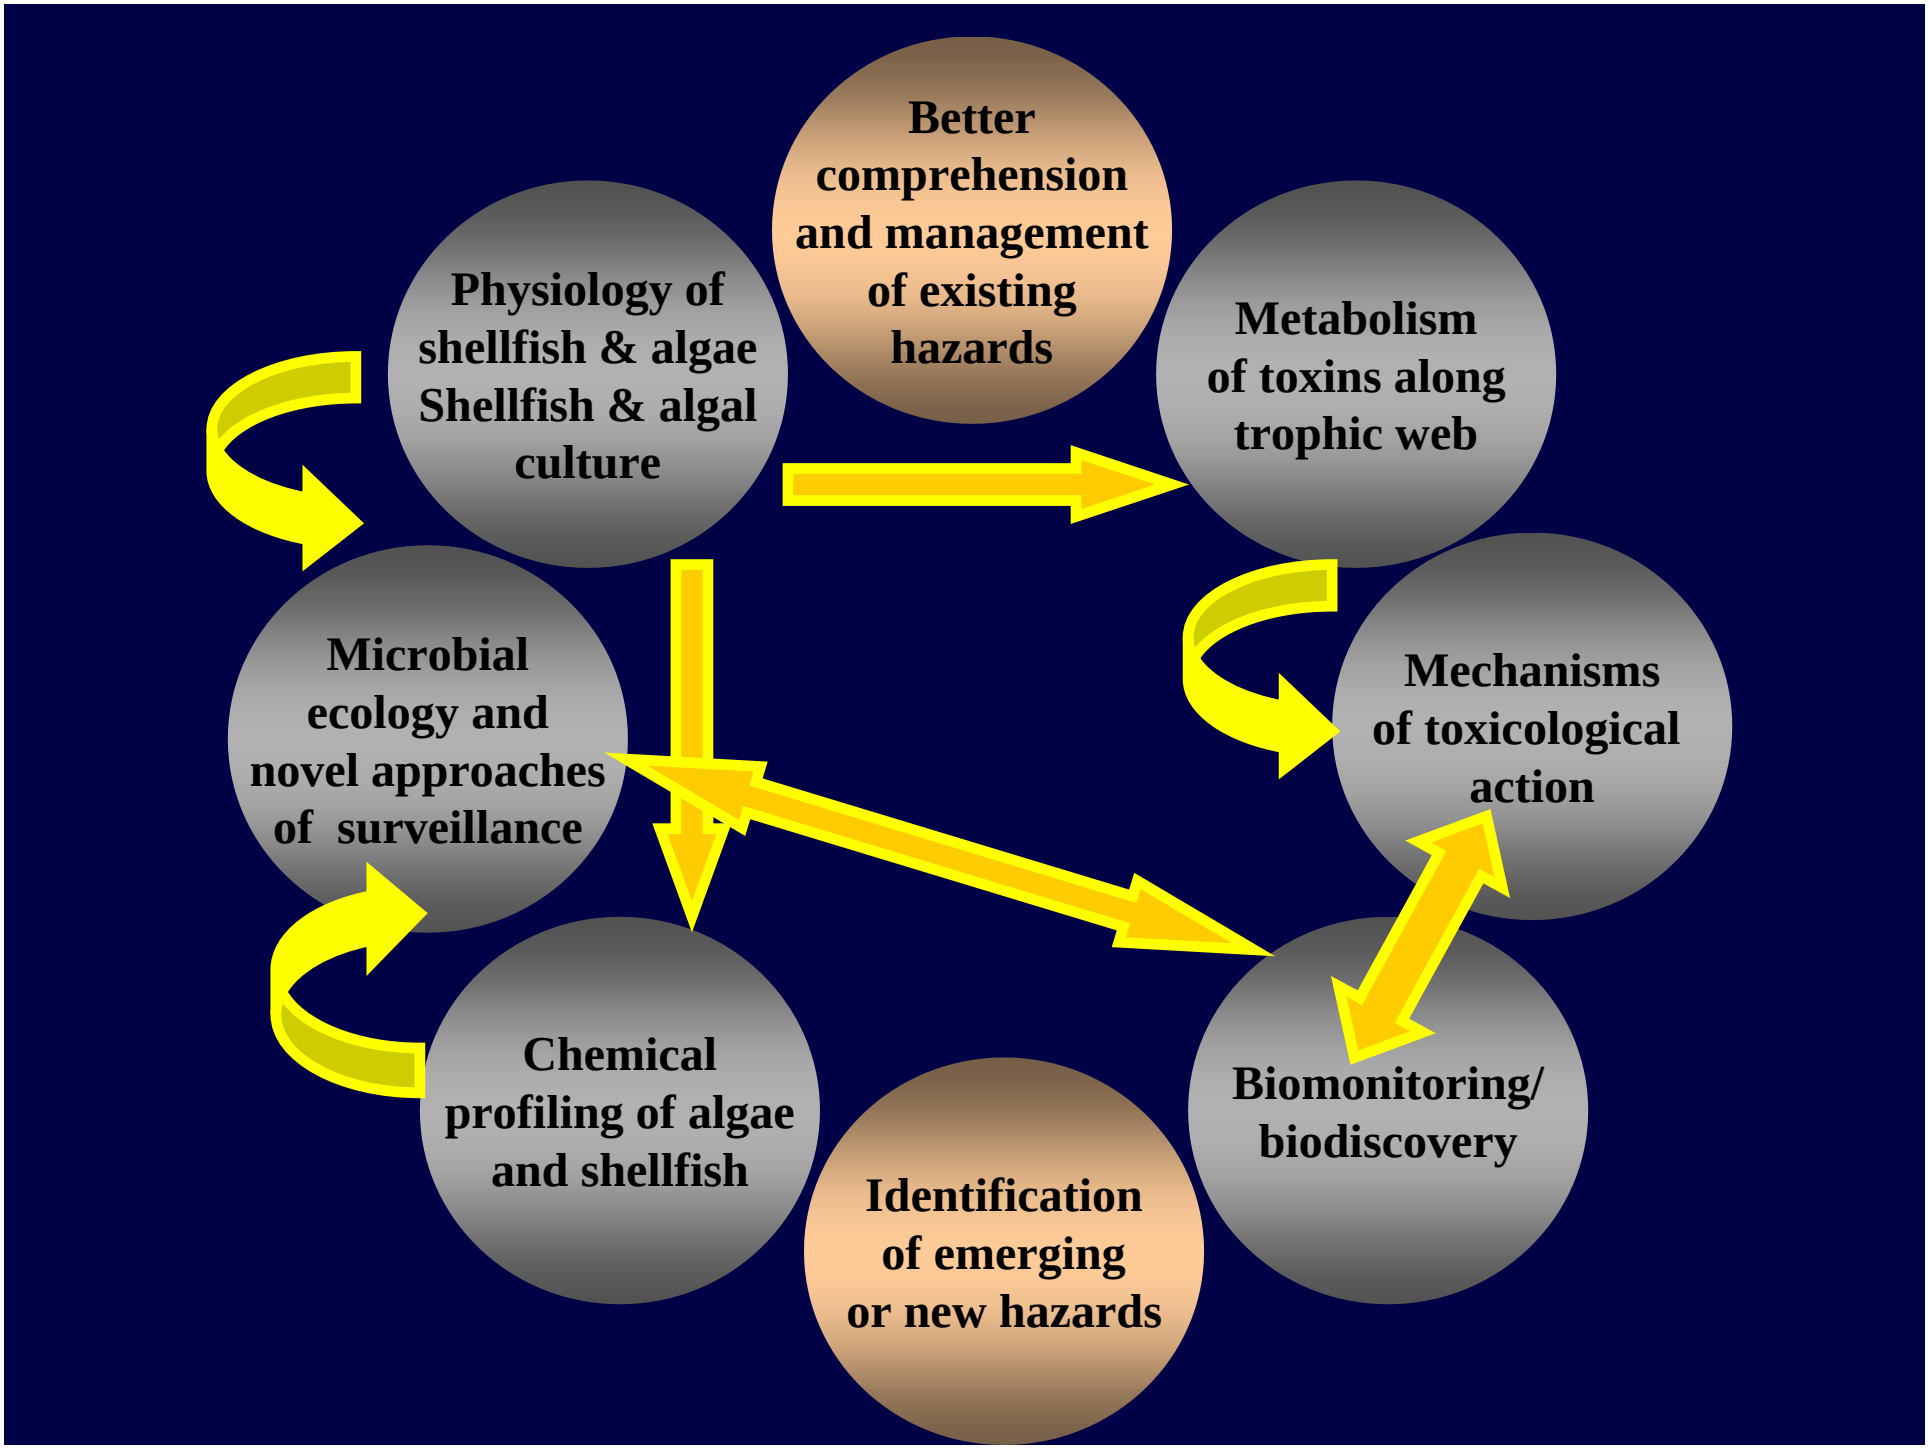
Adopted on 13 August 2009



Summary - 1

- ✓ An array of studies have led to improvements in the chemical analysis of phycotoxins, notably domoic acid, saxitoxins and lipophilic toxins. Particular progress was made in the area of azaspiracids where certified calibrants, reference materials and proficiency testing have been made available to scientists and risk managers in this domain.
- ✓ Efforts in surveillance, method validation and several large scale risk evaluation exercises have contributed to a change in legislation for domoic acid and lipophilic toxins.
- ✓ The understanding of metabolism and chemical stability of toxins in shellfish has been addressed for the azaspiracid and pectenotoxin groups. This knowledge has been translated into recommendations for risk managers and the shellfish industry.

Outlook
Better comprehension and management of existing hazards
Metabolism of toxins along trophic web
Mechanisms of toxicological action
Biomonitoring/ biodiscovery
Identification of emerging or new hazards
Chemical profiling of algae and shellfish
Microbial ecology & taxon./ novel approaches of surveillance
Physiology of shellfish & algae shellfish & algal culture



Better comprehension and management of existing hazards
Physiology of shellfish & algae Shellfish & algal culture
Metabolism of toxins along trophic web

Thierry Jauffrais

Supervisors: C. Herrenknecht, V. Séchet, L. Barillé

Physiology of A. spinosum

Recovery of cells

Production of toxic biomass

Isolation of toxins

Accumulation of toxins in shellfish

Culture optimisation and recovery of cells

Large-scale bioreactor:

Maintained for several weeks

Tangential filtration

over 500L of culture harvested

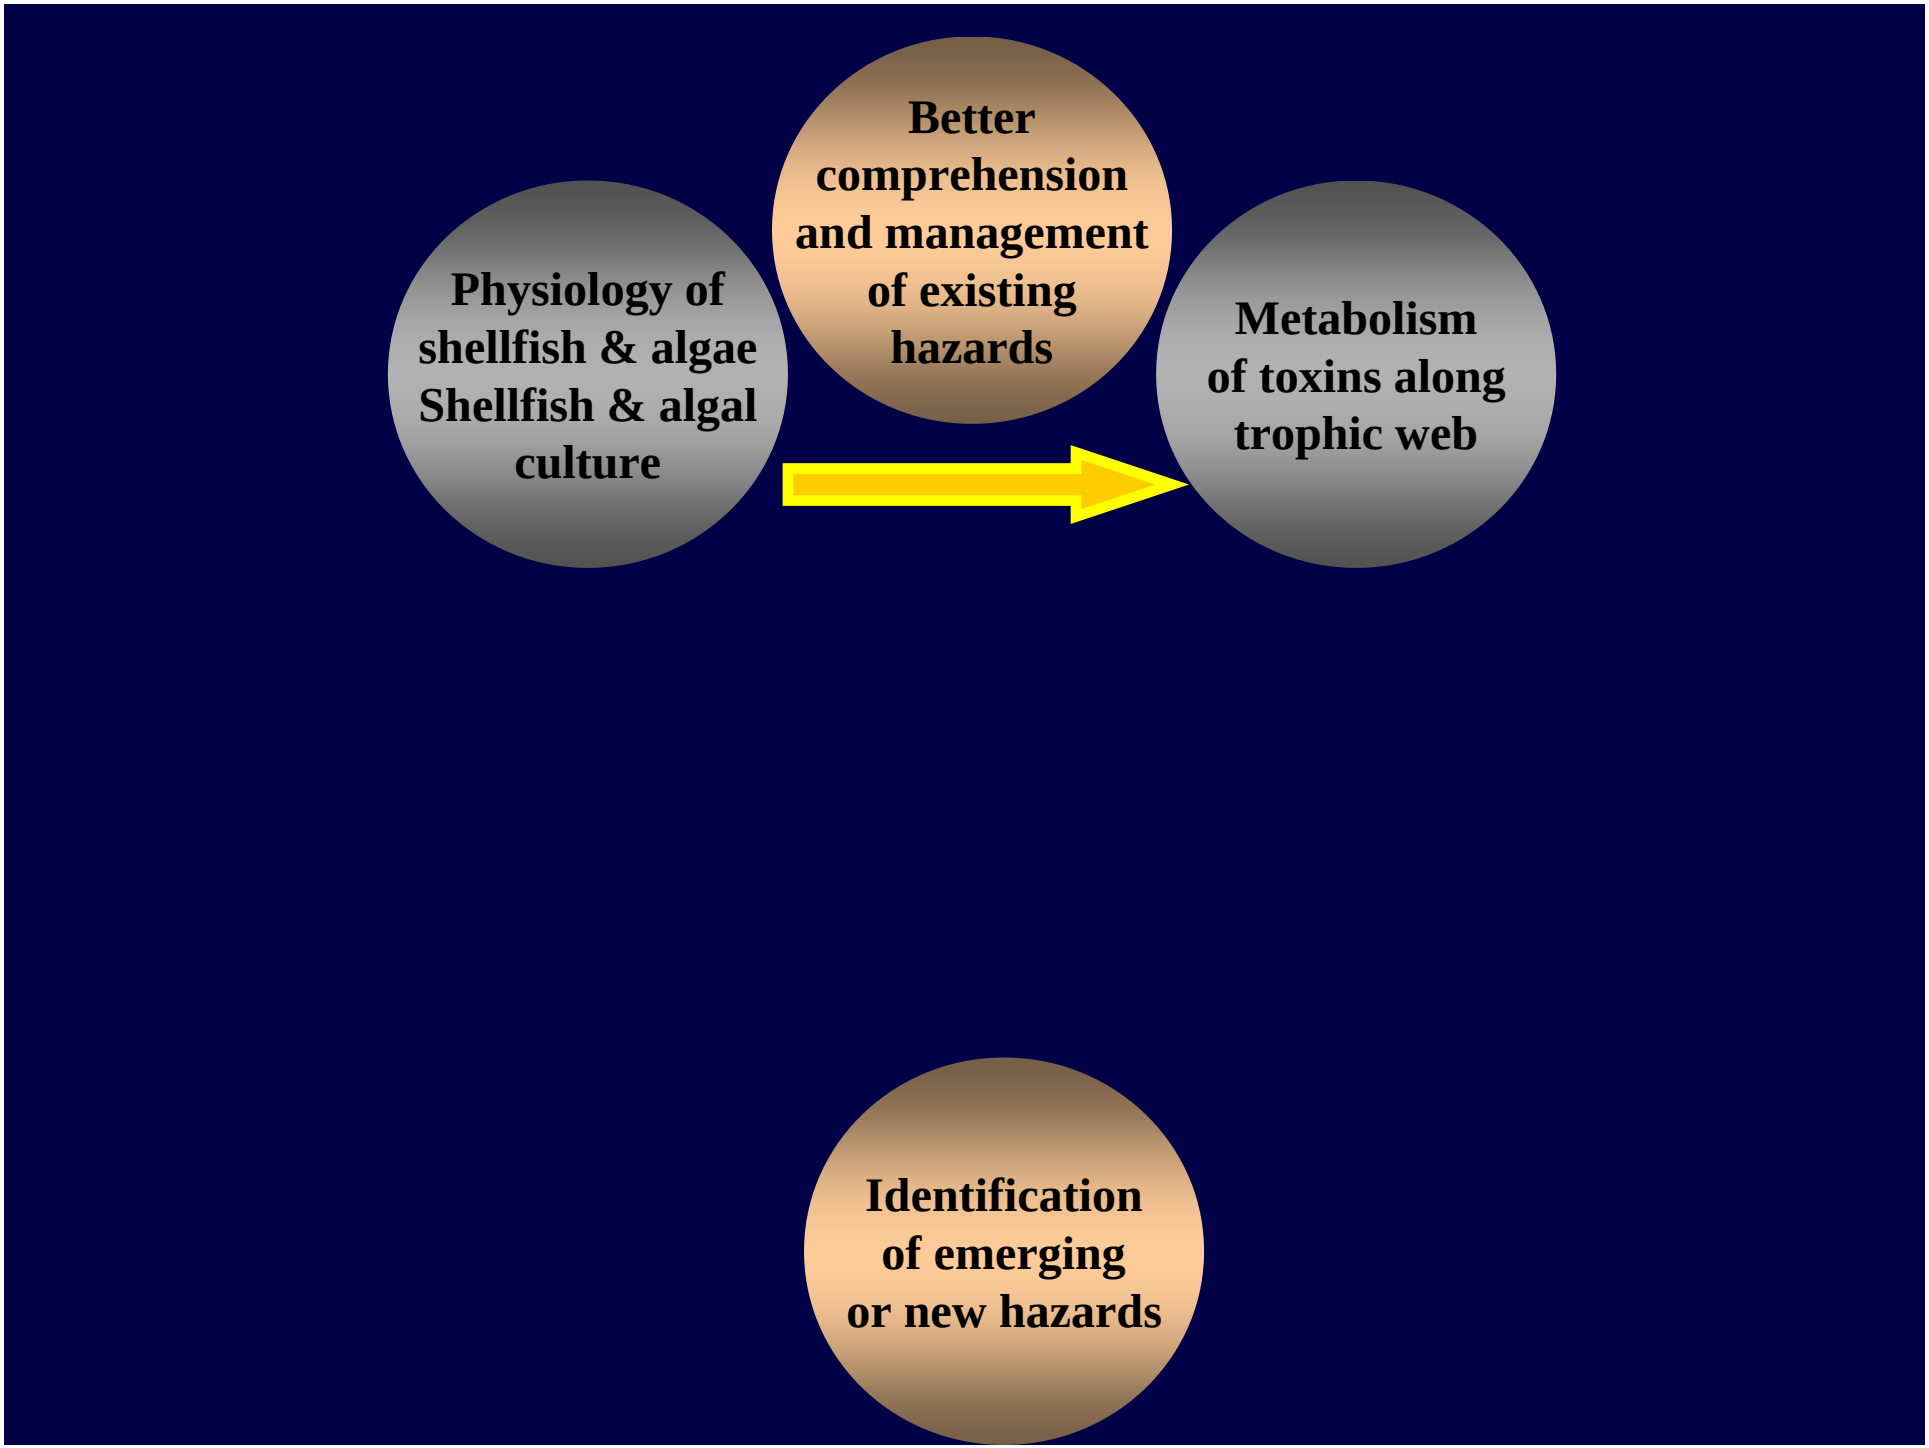
Toxic biomass for isolation of toxins

Large-scale bioreactor:

improvement of factor 5 compared to initially reported toxin quota per cell

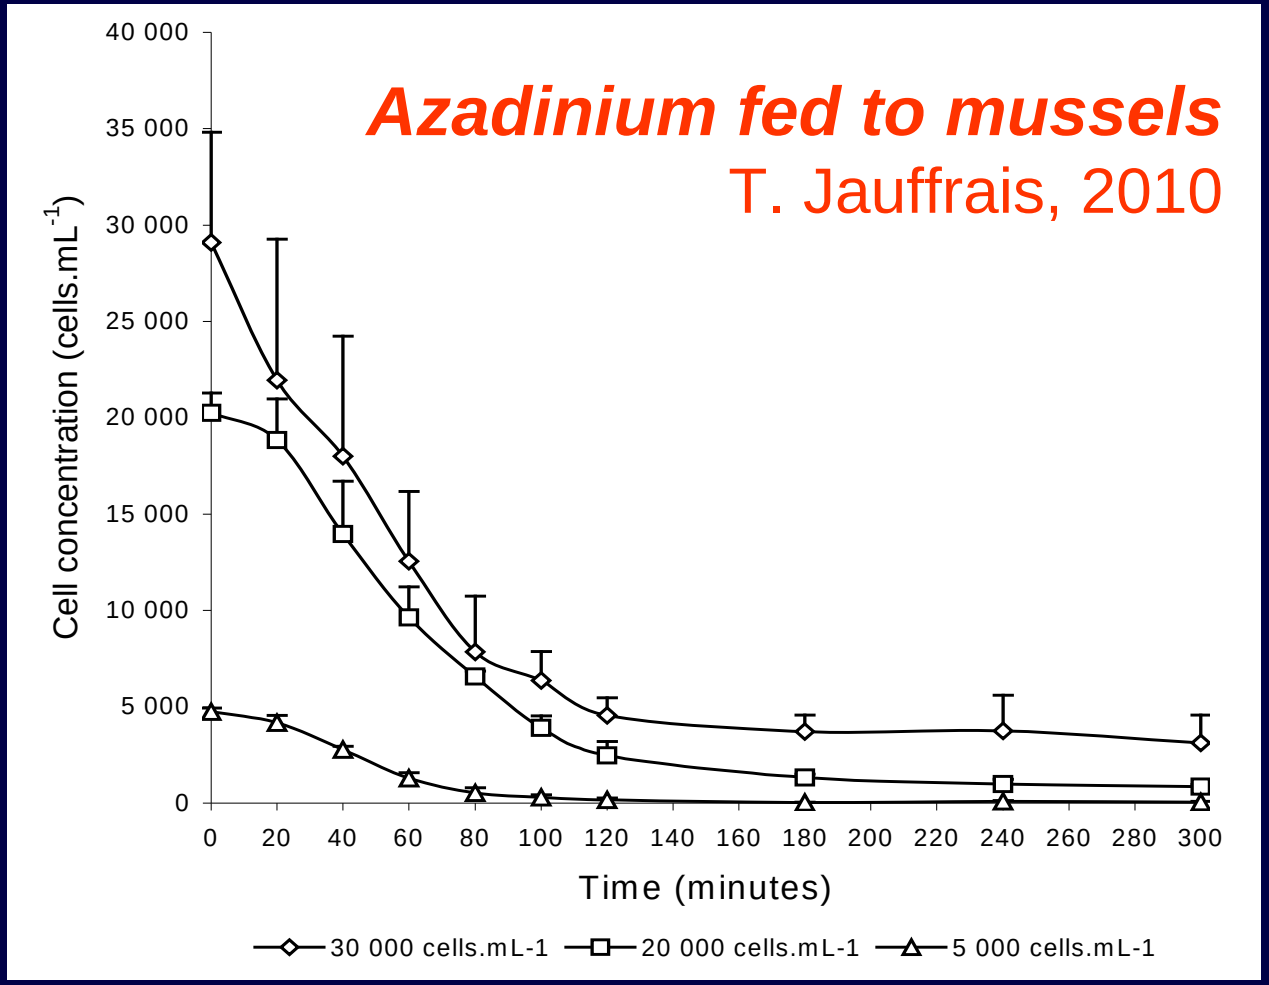
Currently > 600 L culture harvested → ca. 100 g pellet !

Isolation from this material should give better recovery thanks to higher toxin : matrix – ratio !!



Physiology of shellfish & algae
Shellfish & algal culture
Better comprehension and management of existing hazards
Metabolism of toxins along trophic web
Identification of emerging or new hazards

Accumulation along trophic web



→ **Mussels love Azadinium !!**

COLNACOQ - Bioactivity of fungal and microalgal metabolites in the environment surrounding shellfish

Thèse Marie Geiger: Development of a bioassay suite for bioguided fractionation

Supervisory team: YF. Pouchus, O. Grovel, J. Boustie, V. Séchet, J. Dupont

2 Objectives:

- To develop and validate a series of bio-assays for the discovery of lipophilic bio-active compounds in the marine environment

- To apply these bio-assays to the screening of various marine microorganisms (focus on micro-algae and micromycetes) and contaminated shellfish

- 3 types tests -

- Antibacterial activity
- Cytotoxicity
- Insect larval toxicity

Discovery of antibacterial activity in P. expansum

Marie Geiger, 2010

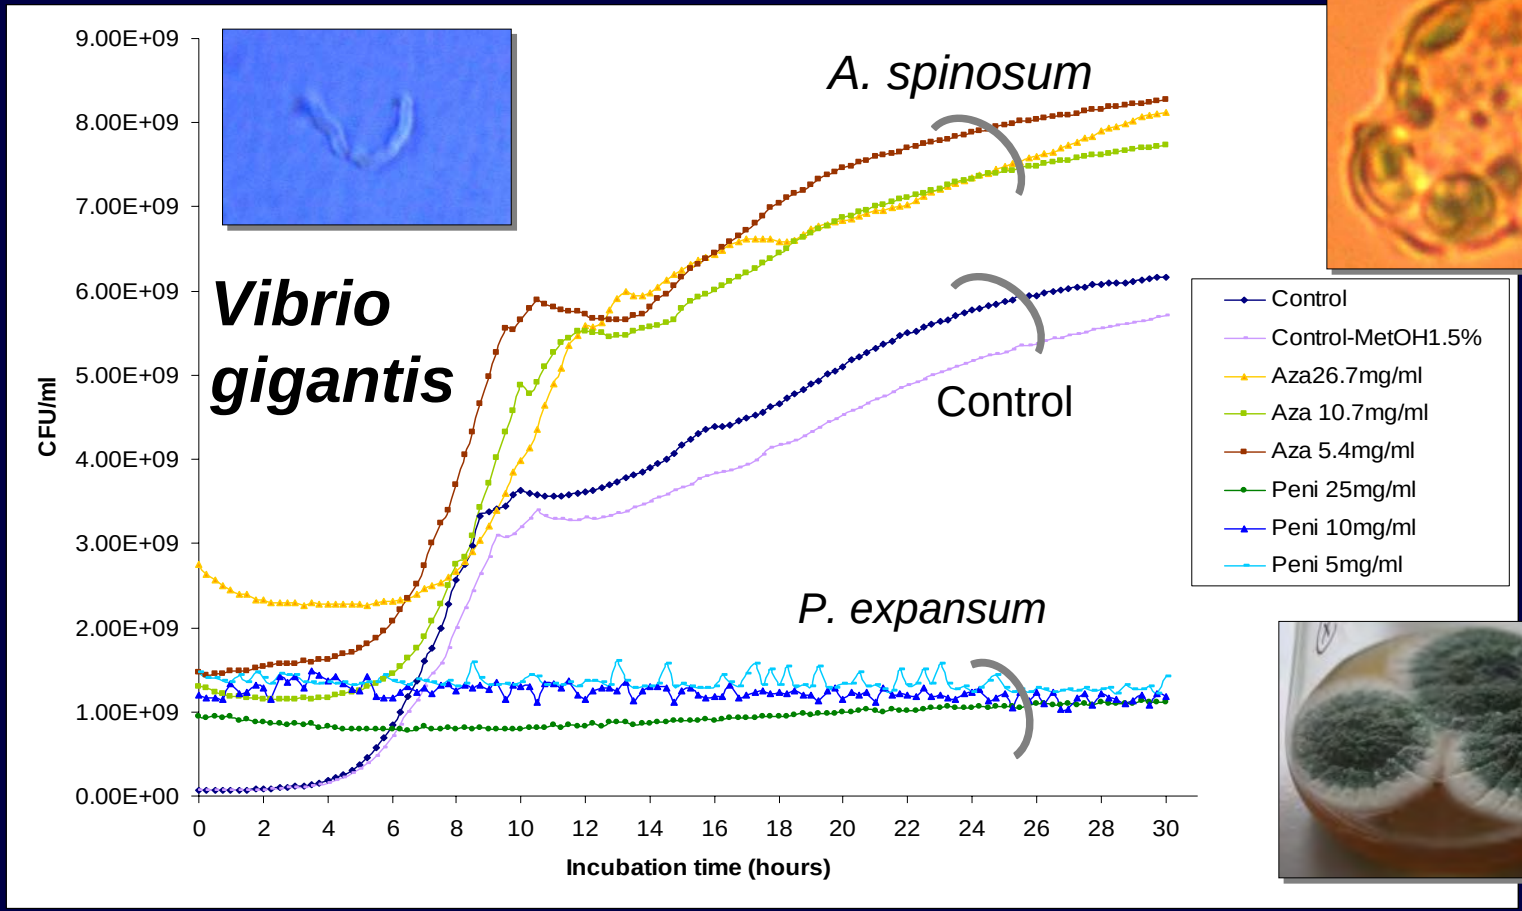

Figure 6: Preliminary antibacterial assay with crude extracts of *A. spinosum* and *P. expansum* tested on *V. crassostreae* (concentrations are given in mg dry residue crude extract per mL of final well volume)

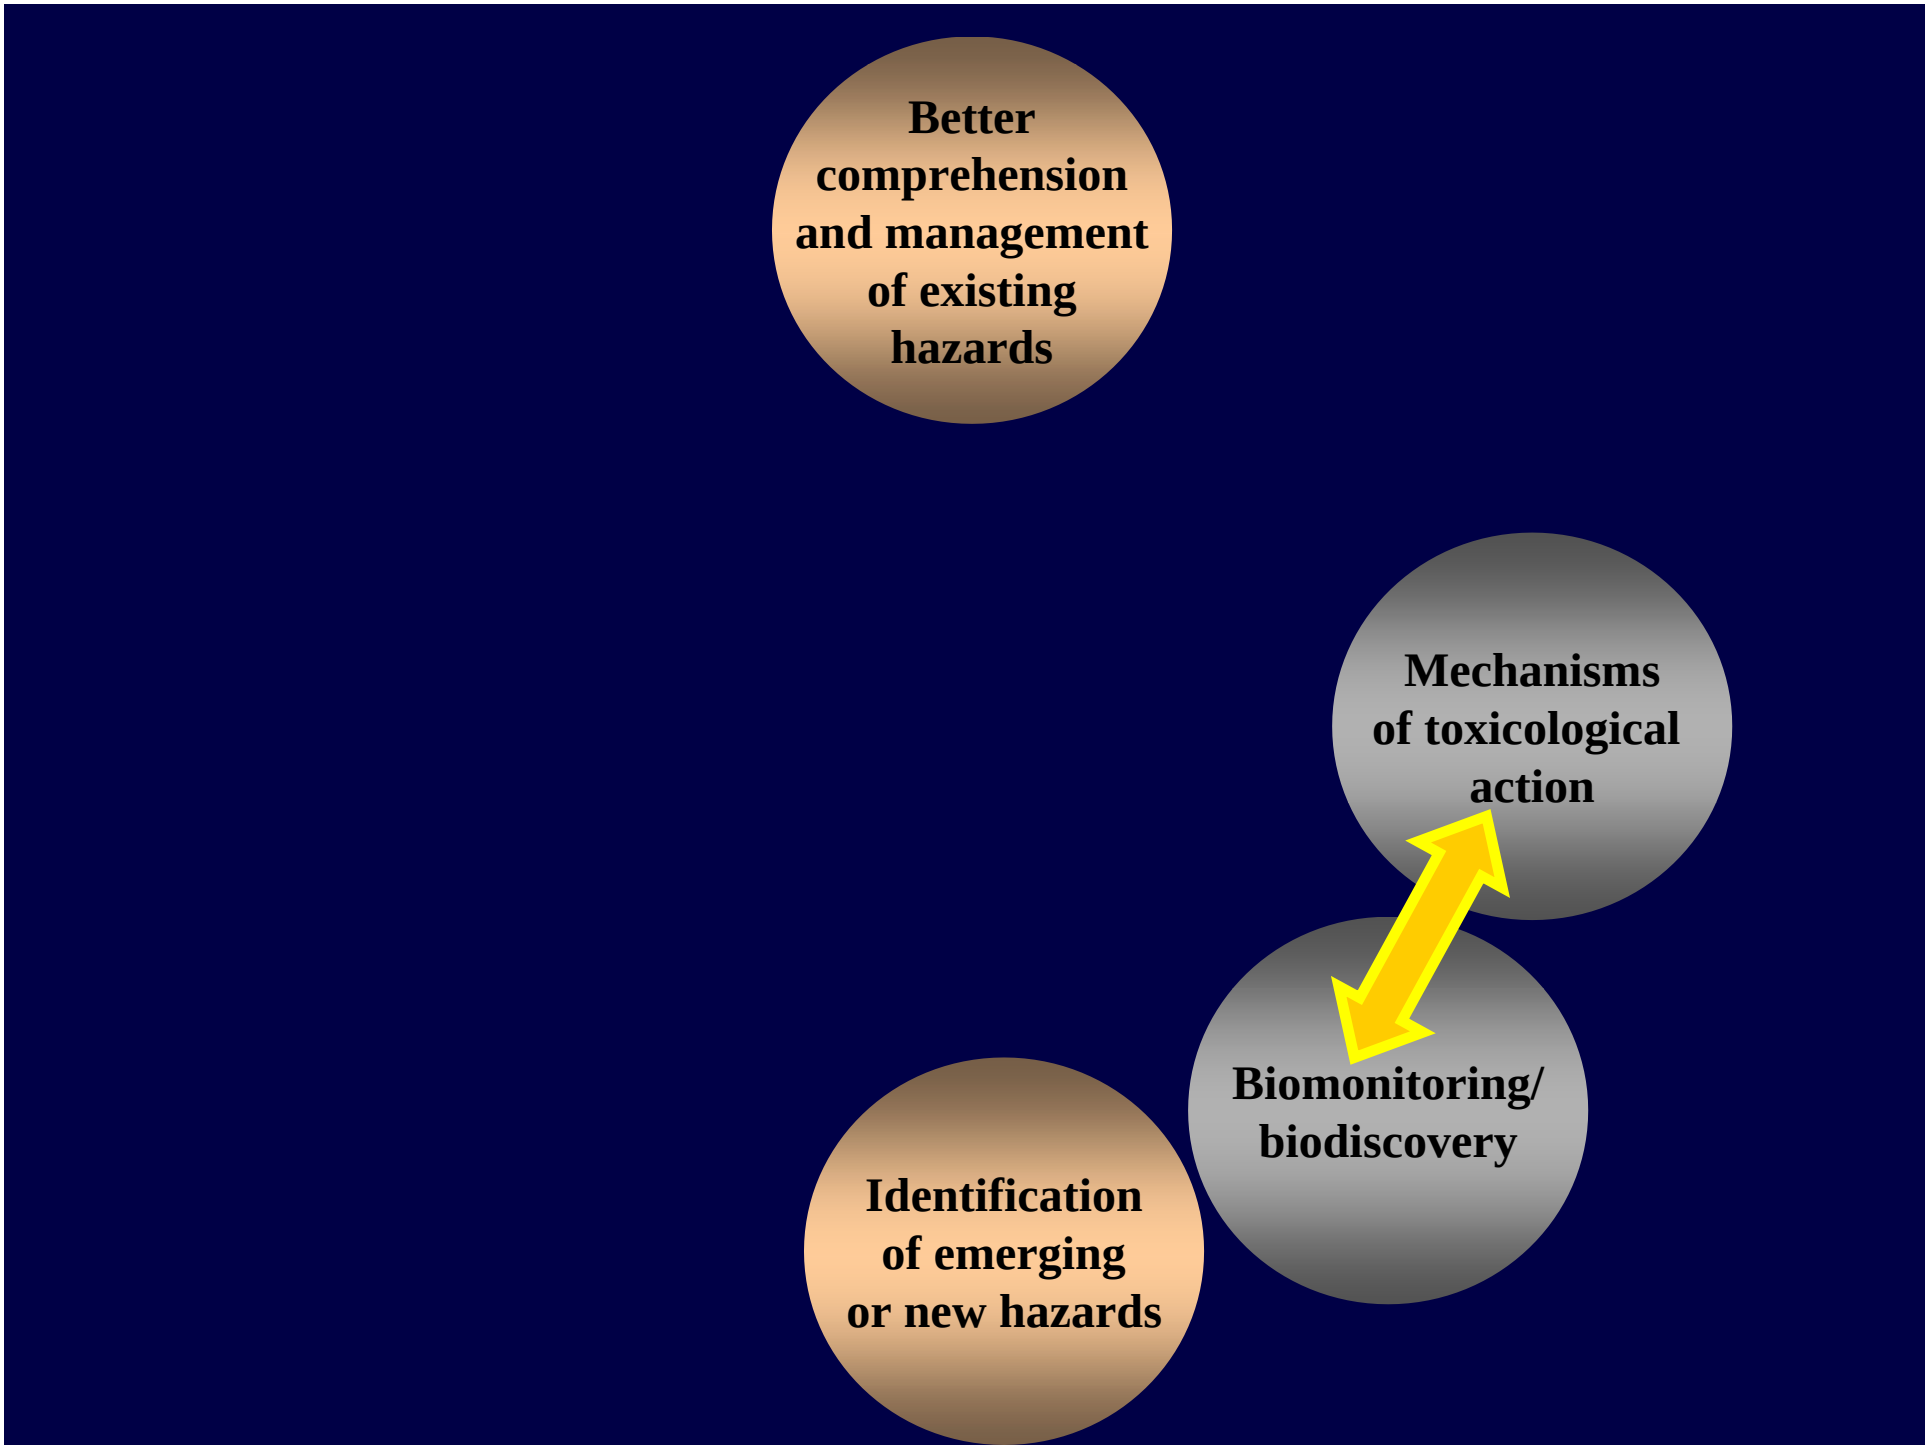

Better comprehension and management of existing hazards

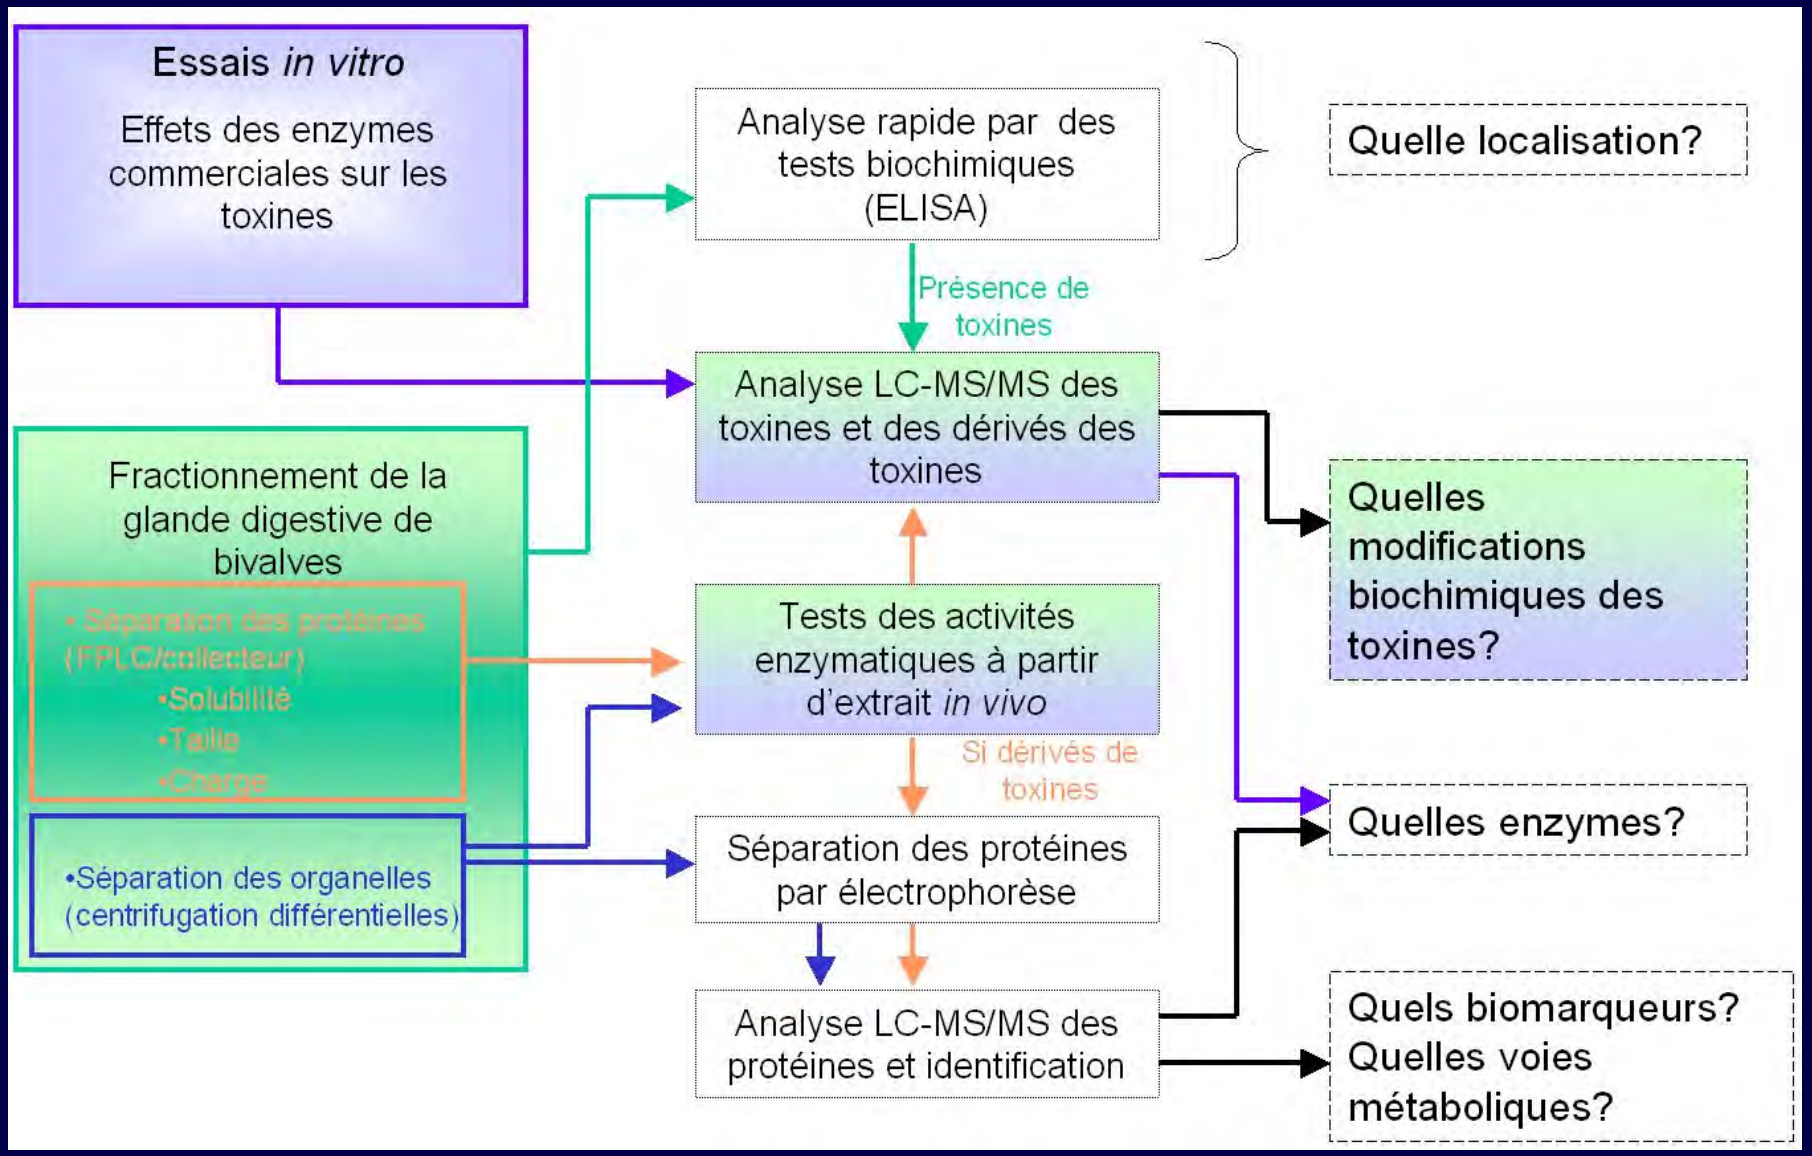
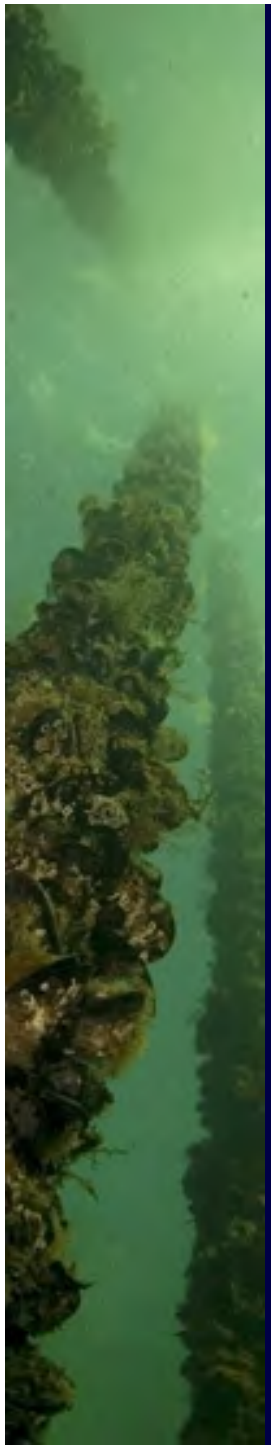
Toxin – protein interactions

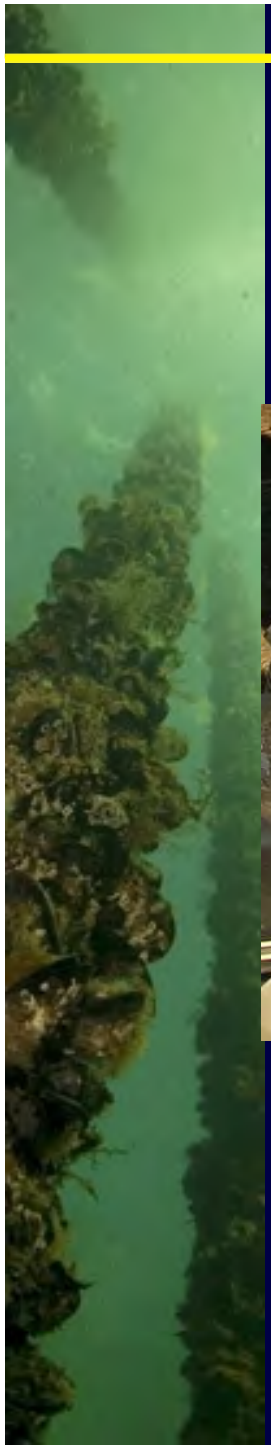
Elodie Nicolau, 2010





Summary - 2

- ✓ Networking efforts combined with a systematic approach allow for multiple studies, as long as funding is available and priorities can be agreed upon.
- ✓ Recent legislative developments and industry requirements require further efforts in the following areas:
  - ✓ Production of purified toxins (to calibrate & establish TEFS)
  - ✓ Production of RMs & method validation
  - ✓ Biological surveillance techniques: High-throughput screening of multiple activities
  - ✓ Better understanding of shellfish metabolism and mechanism of action of toxins in mammals
  - ✓ More efficient detection of new or emerging toxins (HTS HRLC – HRMS techniques)
  - ✓ More efficient monitoring of algae (satellite, flow cytometry, probes, taxonomy)



Un grand merci à tous mes collaborateurs, particulièrement à Henri Loréal, Patrick Lassus et Martial Catherine pour la révision du manuscrit !

Merci pour votre attention !!
