Introduction

This data set contains geochemical data analyzed from cores collected during Leg 2 of *MD147/MARCO POLO 1/IMAGES XII* cruise of R/V *Marion Dufresne* and R/V *Ocean Researcher I* in offshore SW Taiwan. All analytical data are tabulated in this Auxiliary Material (Ts01, Ts02, Ts03 and Ts04).

1. Ts01: Headspace methane and ethane concentrations and carbon isotopic data of CH₄ and CO₂ in the three long piston cores at the MD sites (Corresponding figures: Figure 2 and 3).
 - 1.1 Column “Depth”, cmbsf, centimeters below sea floor.
 - 1.2 Column “C1/(C2+C3)”, ratio of methane concentrations (C1) to the sum of ethane (C2) and propane (C3) concentrations.
2. Ts02: Porewater concentrations, POC content and porosity in the three long piston cores at the MD sites (Corresponding figure: Figure 2).
3. Ts03: Porewater concentrations and porosity in the four short piston cores at the ORI sites (Corresponding figure: Figure 2).
4. Ts04: Analytical results of reference sites (Corresponding figure: Figure 2).

Ts01. Headspace methane and ethane concentrations and carbon isotopic data of CH₄ and CO₂ in the three long piston cores at the MD sites. b.d.l. is below detection limit.
