Introduction

This document reports on the French oceanographic cruises conducted in 2014. It was drawn up by IFREMER, and more specifically by the SISMER (French acronym for marine scientific information systems) department which is in charge of managing cruise data.

It provides a detailed description of the role of the various players managing French ocean-going facilities and of the means to archive cruise information and oceanographic data. It presents the fleet's activity in 2014 and provides dynamic access to cruise information through the web portal CALLED Nautilus: http://www.ifremer.fr/sismer/index_UK.htm.

The electronic version of this document is available at the following address:

<http://dx.doi.org/10.13155/38208>.

Clicking on the hypertext links gives direct access to the cruise descriptions.

Previous years' reports for French oceanographic cruises are also available via the Archimer website IFREMER'S INSTITUTIONAL archive, at: <http://archimer.ifremer.fr/index.jsp?la=en>.

SISMER's thanks go to:

- ✓ the chief scientists of 2014 cruises,
- ✓ GENAVIR,
- ✓ Jean-Xavier Castrec and Sylvie Van Iseghem (IFREMER/DMON/PF),
- ✓ Yves Gouriou and Dominique lopes (IRD),
- ✓ Hélène Léau and Valérie Hadoux (IPEV),
- ✓ Malika Oudia and Pascal Morin (CNFC), and
- ✓ Viviane Bout-Roumazeilles (CNFH).

They have enabled us to collect information required for this report, in particular, and to contribute to increasing the value of efforts to collect measurements at sea.

1 Those involved

The main French ocean research vessels are managed by the following organizations:

- **CNRS/INSU** (French national scientific research center / national institute for sciences of the universe),
- **IFREMER** (French research institute for exploitation of the sea),
- **IPEV** (French polar institute – Paul Emile Victor),
- **IRD** (French research institute for cooperative development, formerly ORSTOM),
- **FRENCH NAVY/SHOM** (French Navy's hydrographic and oceanographic service).

The first 4 organisations are working together in the Fleet Joint Service Unit (UMS FLOTTE in French) in order to pool sea-going resources (vessels and vehicles) more efficiently and effectively and be able to rely on assessment commissions.

The French scientific community also has access to other European vessels through the OFEG (Ocean Facilities Exchange Group) which IFREMER belongs to. OFEG coordinates ship time exchanges between the fleets of the United Kingdom, Germany, Spain, the Netherlands, Norway and France.

Finally, SISMER ensures that the data related to these cruises are permanently stored.

1.1 FRENCH OCEANOGRAPHIC FLEET JSU JOINT SERVICE UNIT AND ASSESSMENT COMMISSIONS

Since 2008, the French sea-going facilities for oceanographic research from CNRS, IFREMER, IPEV and IRD have made up the French oceanographic fleet major research infrastructure (FOF MRI).

A significant step was made for integration of French ocean-going resources in March 2011, when the French oceanographic fleet joint service unit (JSU) - was created, initially for a 4 year period.

The JSU's assigned objective is to improve the management of the French ocean research fleet, shared by the four operators up until then.

Setting up this Joint Service Unit with unified governance should give the public authorities an overarching view of this Major Research Infrastructure (MRI) in the framework of supervising public policies and clear the way for a comprehensive strategic vision which is currently lacking.

To meet this objective, **three missions** have been defined:

- develop integrated scheduling of vessels and large-scale equipment,
- prepare and coordinate a plan for the fleet's evolution, and
- coordinate investment policies.

On the FLEET JSU WEBSITE (<http://www.flotteoceanographique.fr/>) are descriptions and activity of all vessels and vehicles of all JSU members, cruise schedules and information about cruise applications and cruises conducted.

In terms of scheduling for seagoing facilities, the FLEET JSU relies, amongst other things, on the assessments made by two commissions following the national call for ocean-going and coastal cruises:

- the **national ocean-going fleet commission (CNFH)**, for cruise projects requiring ocean research vessels from the French offshore oceanographic fleet.
- the **national coastal fleet commission (CNFH)**, for cruise projects requiring ocean research vessels from the French inshore oceanographic fleet.

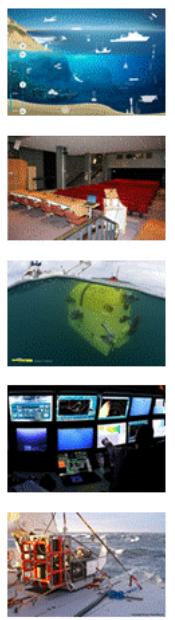

The role of these commissions is also to:

- assess, a posteriori, the results from coastal oceanographic cruises performed using French oceanographic resources; and

- respond to requests from the Scientific and strategic orientations committee (COSS) to take part in drawing up advice concerning the sea-going resources for oceanographic research.

The diagram below shows how the cruise process functions, from application to achievement.

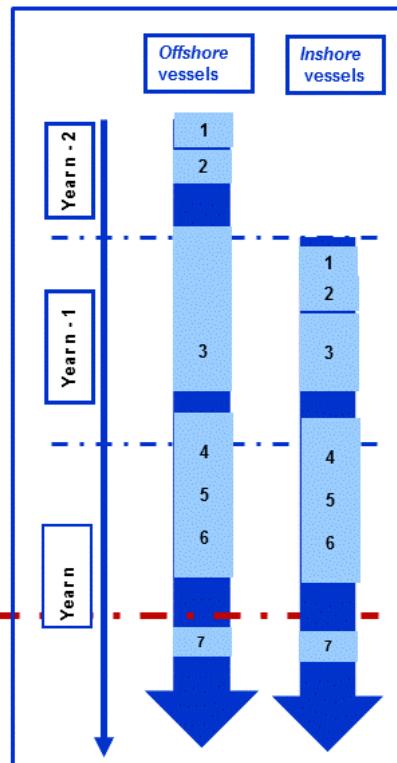

The scheduling process

Steps of the process:

1. *Call for tender*
2. *Evaluation by CNFC – CNFH*
3. JSU fleet scheduling
4. Chief scientist informed about the various regulations
5. Request filed for studies in foreign waters
6. Preparation of the cruise
7. Cruise report

Cruise is conducted

1.2 SISMER

It has been proved that without permanent archiving, done following well established standards, 30% of data acquired is lost by the end of 10 years. The cost of using facilities for data acquisition at sea is so high that it is essential to implement the resources and means necessary for good data preservation.

SISMER is an IFREMER department located at its Brittany center. It is part of the IDM (marine information systems and data) unit of the IMN department of Marine and Digital Infrastructure.

It is France's national coordinator for international data exchanges in the framework of the "International Oceanographic Data and Information Exchange" (IODE) programme of UNESCO's Intergovernmental Oceanographic Commission (IOC).

To meet the needs of the scientific community, it works with the ISI (Information systems engineering) service in the IDM (IT and marine data) department to develop and use marine-related information systems and databases. The service manages and archives the data collected during French oceanographic cruises and keeps an inventory of them. It also manages real-time data from various operational oceanographic systems (Coriolis database).

SISMER manages the French national oceanographic database, which under very specific rules protects, standardizes and disseminates, data from various fields of marine science, like hydrology, marine biochemistry, currentometry, gravimetry, magnetometry, seismics, bathymetry, acoustic imaging, physical-

chemical seabed characteristics and the deep sea environment. The data can also come from French research laboratories taking part in surveys at sea.

Sismer archives the data, along with information about its source, the experimental conditions and collection methodology (metadata). It applies quality control in accordance with international standards and distributes the data and metadata using standardized formats.

It makes an active contribution to French, European and international working groups devoted to standardization and exchange of data. It coordinates the SeaDataNet pan-European marine data center network, whose aim is to link the main European oceanographic data centers and thus give users access on line to distributed databases through a single portal.

No information on surveys or cruises classified as "confidential defence" is held in SISMER's vessel database. However, in order to keep a lasting record for other confidential cruises (commercial contracts, surveys made under contract, etc.), the data are archived but not distributed.

Data which is incorrectly or not archived will ultimately be lost for good.

Cruise data which is incorrectly referenced (CSR sheet incorrectly or not completed) cannot be accessed and are therefore ultimately lost.

The value, in both scientific and financial terms, of data acquired at sea represents a legacy which must be preserved.

2 Oceanographic cruises

2.1 DEFINITION

An "oceanographic cruise" is a set of days during which a vessel acquired observational data. This can be outings of one day (station vessels), several days (inshore vessels) or several weeks (offshore vessels).

"French cruise" means a cruise for which the home organization of the client (chief scientist) - or of the contracting authority - is French.

Any cruise classified « Confidential Defence » or considered as such is not listed in this document. Those cruises are taken into account for the historical report, but are not counted in the yearly report.

2.2 CRUISES INVENTORY

Taking inventory of cruises is done in several steps:

- Using the scheduled ocean cruise programs. This is done with the help of the people in charge of ship management;
- At the end of each cruise, the chief scientists are requested to send a description of their cruise to SISMER. The summary can be completed directly on line (<http://forms.ifremer.fr/sismer/csr/>).

A template (called a CSR - Cruise Summary Report sheet) is available on the SISMER website, found here: http://www.ifremer.fr/sismer/FR/catal/campagne/Fiche_CSR_FR.htm or, for vessels from the JSU, in [Compte-rendu de la campagne](#) made available on the FLEET JSU website.

This action is carried out in compliance with the procedure followed aboard all JSU vessels (<http://www.flotteoceanographique.fr/Campagnes-scientifiques>) and with the 'Vade-Mecum for inshore oceanographic vessel users' guide for INSU and IFREMER (<http://cir.dt.insu.cnrs.fr/docfiches.html>).

- The information thus gathered is then archived in the SISMER database. Each cruise is given a track number (single identifier).

2.3 CHIEF SCIENTISTS' RULES AND DUTIES

In keeping with the protocol in effect, once the cruise has been accepted, it is compulsory for the chief scientist to become informed about a number of regulations and to inform all members of the scientific team who will embark about them. These texts especially deal with: the [rights and obligations in terms of archiving and disseminating data](#), acquired aboard vessels, and the [role the chief scientist is expected to play](#) on board the vessel.

The process for carrying out cruises and the related documents for [offshore](#) and [inshore](#) cruises can be found on line on the FLEET JSU website.

2.4 TRANSMISSION OF SUMMARIES

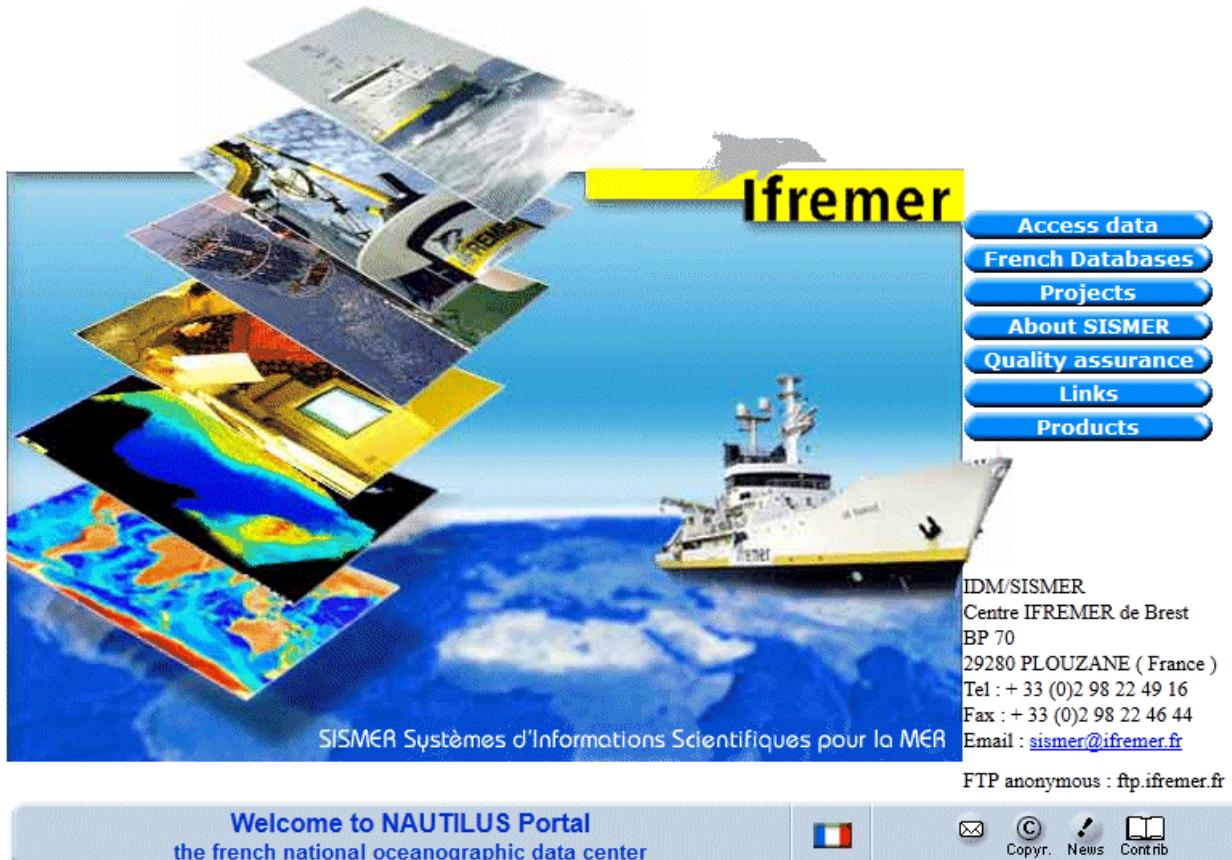

In the framework of the European SeaDataNet - pan-European Infrastructure for marine and ocean data management (<http://www.seadatanet.org/>), the cruise summaries are sent to BSH/DOD (German data center) which ensures that the European CSR are disseminated worldwide, particularly to ICES/CIEM (International Council for the Exploration of the Sea).

3 Access to cruises and data

The full inventory of *oceanographic cruises* in the French database and *their related data* contains information covering almost a century of measurements taken at sea.

It can be accessed at the following URL:

http://www.ifremer.fr/sismer/index_UK.htm by clicking "Access data" then "Sea cruises" to go to the cruises or "In-situ data" to access the data.

This portal provides cartographic and interactive consultation and search functions for cruise data. It also enables data to be retrieved or ordered on line using the form on the server, depending on the degree of confidential and the file size (500 Mb) permitting.

French research cruises and their data are incorporated in the SeaDataNet project's European catalogues (<http://www.seadatanet.org/>). Information about the cruises can be found at: http://seadata.bsh.de/csr/retrieve/sdn2_index.html, and their data is on the SeaDataNet website at http://seadatanet.maris2.nl/v_cdi_v3/search.asp.

An accessible database on POGO's international server at <http://www.pogo-oceancruises.org/> gives the scheduled cruises of research vessels over 60 m LOA for a dozen countries.

Along with the cruise inventory, data from various fields of ocean research are also archived. They include marine physics, chemistry, biology, geology and geophysics, as well as exploratory fisheries and technology.

SISMER archives and disseminates part of the data collected aboard French research vessels - primarily those of FLEET JSU vessels - and observation systems.

The data are transmitted following one of the following patterns:

Sent directly to SISMER at the end of the mission:

- Raw data acquired using French facilities managed by IFREMER (major facilities),
- Single- and multi-beam bathymetric data,
- Gravimetry data,
- Magnetometry data
- Seismic reflection data,
- Sonar imaging data (sidescan sonars, multibeam echo sounders),
- Navigational data,
- Shipboard ADCP data from RV *L'Atalante*, *Thalassa*, *Le Suroît*, *Beautemps-Beaupré*, *Pourquoi Pas ?*,
- Data from underwater vehicles,
- Fisheries data.

Data requiring laboratory processing:

These data are transmitted once measurements have been validated or samples analyzed:

- Marine physical and biochemical data collected at hydrological stations (CTD and bottle casts);
- Eulerian or Lagrangian time series (currentometry, temperature, deep-sea tide gauges),
- Geological samples and analyses.

Data transmitted in real time:

When the ship is so equipped, data can be sent directly in real time for the needs of modeling experts in the framework of operational oceanographic projects:

- CTD and XBT from some cruises,
- Shipboard ADCP from the vessels *Beautemps-Beaupré* and *Pourquoi Pas ?*.

Data compilations:

SISMER manages and distributes archives of data and data compilation products: theme-based databases, digital terrain models (MNT), maps and atlases which are created in partnership with other scientific centers and laboratories, in the framework of French, European and international programs:

The Sextant portal (marine and coastal geographical data infrastructures) provides a catalogue of baseline reference data related to the marine environment:

<http://sextant.ifremer.fr/en/;jsessionid=1B41F855D32D2E11E2CD57C9C7993D05>

4 Cruises report

As time goes by, the cruise database is enriched with new data. Sometimes we also recover information about older cruises, particularly when a link to a bibliography or to data is requested.

4.1 BACKGROUND

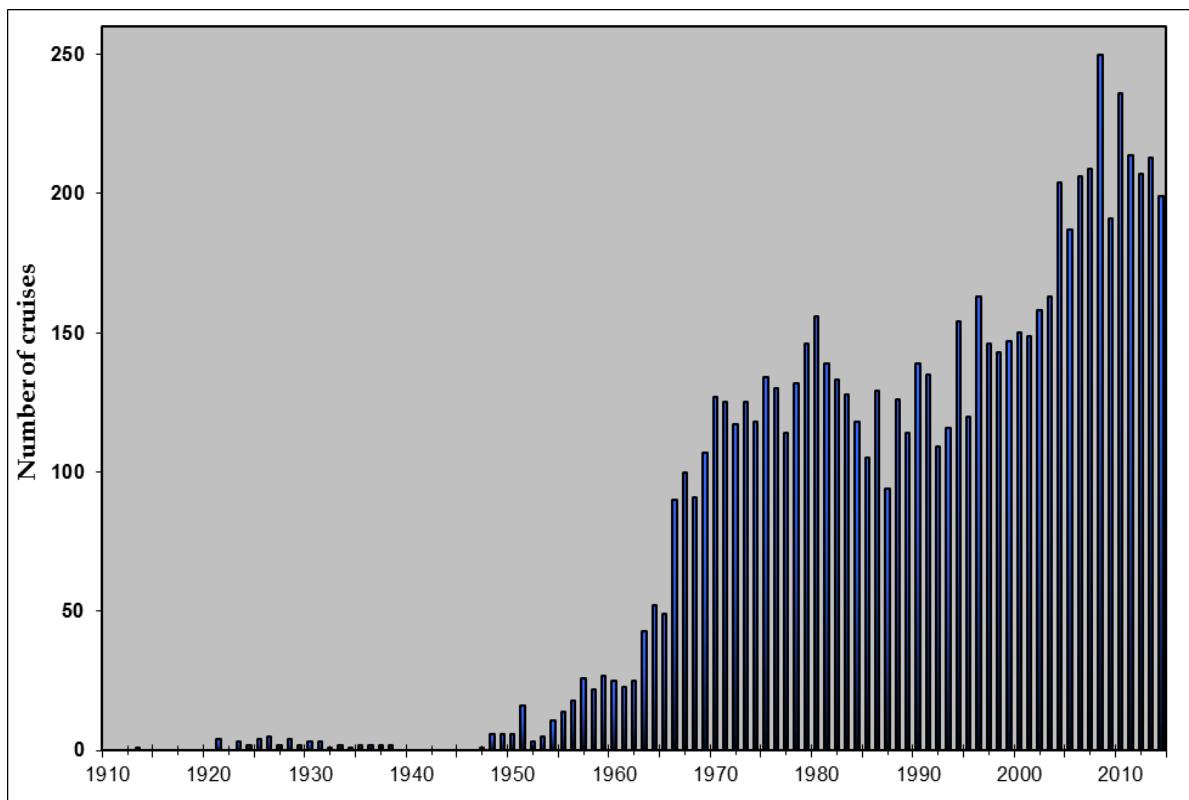

In all, SISMER has catalogued 7,683 French oceanographic cruises (broadly speaking, without any confidentiality criteria) since 1913, including:

- ✓ 6,617 cruises (strictly speaking),
- ✓ 648 simple or piggyback transits,
- ✓ 316 sea-trial or shake-down cruises,
- ✓ 48 service provisions,
- ✓ 54 other cruises.

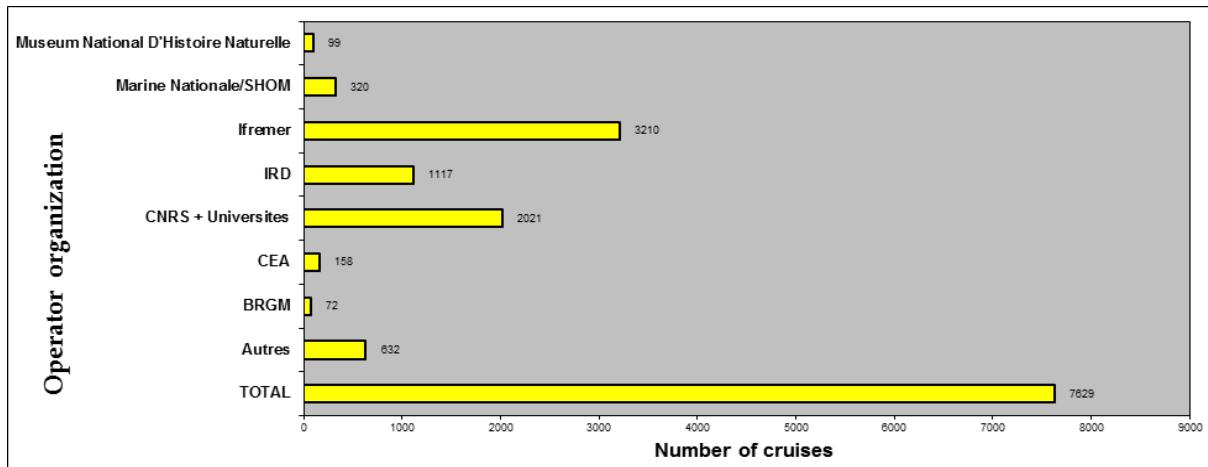

Only 7,629 cruises (not including these "other cruises") are covered in this report's statistics.

In the past, cruises were generally conducted by the former Scientific and technical fisheries institute (ISTPM) and by the French Navy's hydrographic and oceanographic service (FRENCH NAVY/SHOM). Later, other organizations like the CNRS, IRD (formerly ORSTOM), IPEV (formerly IFRTP), the National museum of natural history (MNHN), CNEXO (National center for exploitation of the oceans) and then IFREMER (created by merging ISTPM-CNEXO) greatly contributed to the efforts to collect measurements at sea, using their own facilities. Currently, the growing number of European projects and international programs for ship time sharing mean that a number of French cruises are made aboard foreign vessels.

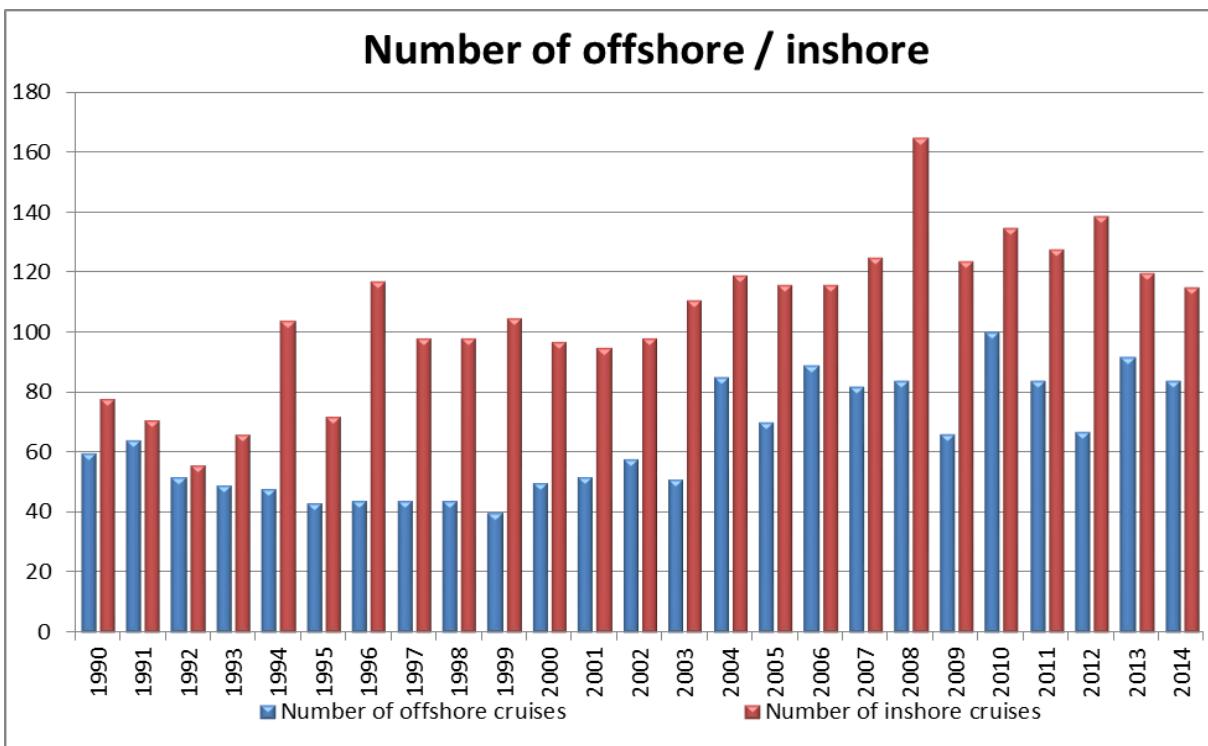

The 7,629 French cruises (including ocean research cruises, simple transit and piggyback missions, sea trial cruises and commercial service provision) can be broken down over time, since 1913, as follows:

The main client organizations (usually the organization which the chief scientist belongs to) for these cruises were:

The graph below shows trends for offshore (ship \geq 50 m LOA) and inshore (ship \leq 50 m LOA) cruises over the past 25 years.

The number of both ocean-going and inshore cruises has been growing over these 25 years. However, this seems to have stabilized over the past ten years or so at around 120 cruises per year for inshore vessels or those belonging to stations and 80 cruises per year for offshore vessels.

4.2 YEAR 2014

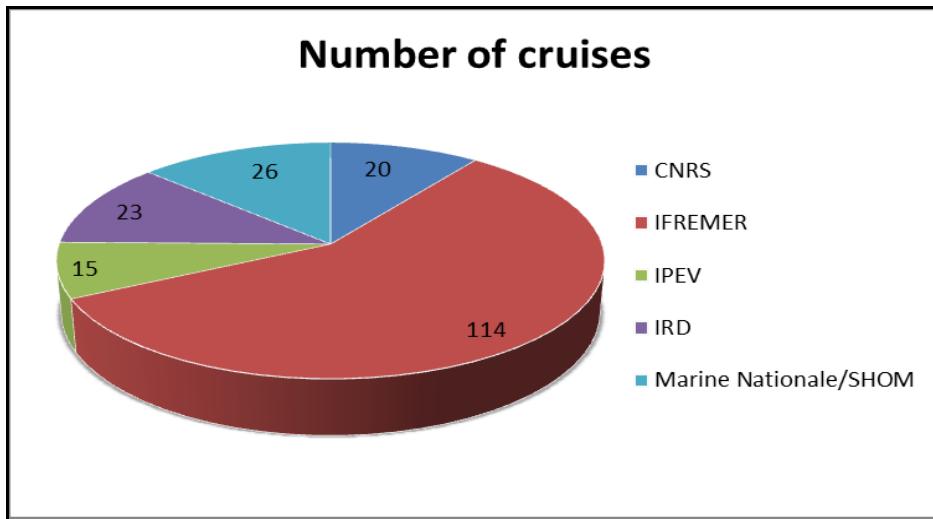

In 2014, 198 French cruises (oceanographic, trials, transits and commercial service performance, not classified as "Confidential") were recorded at SISMER for offshore and inshore vessels.

This is not entirely representative of the French fleet, since there were also cruises conducted on station vessels, but a report could not be drawn up on them for last year. However, the schedules for these vessels can be accessed on line:

<http://www.flotteoceanographique.fr/Calendriers-des-campagnes/Calendriers-navires-de-station>

4.2.1 Breakdown of cruises by managing organization

The managing organization is the shipowner.

4.2.2 Breakdown of cruises by client organization

The client organization is the contracting authority requesting the cruise (generally represented by the 1st chief scientist).

Chief scientist's organization	Number of cruises
CNRS+UNIVERSITIES	44
IPEV	2
IRD	11
Ifremer	103
French Navy/SHOM	29
BRGM	1
CEA	2
National museum of natural history	3
Various private-sector organizations	1
Ministry of ecology and sustainable development	1
Secretariat general of the Pacific community	1
TOTAL	198

As regards the chief scientists, the same main organizations are present each year. Other organizations appear on a more occasional basis.

4.3 CRUISES BY VESSEL

This report presents the activity of vessels in the French fleet as comprehensively as possible. Some of the cruises have been referenced at Sismer, meaning that their chief scientist sent us their data at the end of the cruise by filling out the CSR sheet. Steps are being taken to try and obtain the same outcome for station boats, but some time is still needed to achieve this.

4.3.1 Cruises referenced at SISMER

The 198 cruises in 2014 were carried out aboard 7 offshore ocean research vessels, 9 inshore oceanographic vessels, 1 station boats and 2 underwater vehicles (NAUTILE and ROV VICTOR 6000).

The WEBSITE of the JSU <http://www.flotteoceanographique.fr/La-flotte/Navires> provides a detailed description of the fleet within this grouping.

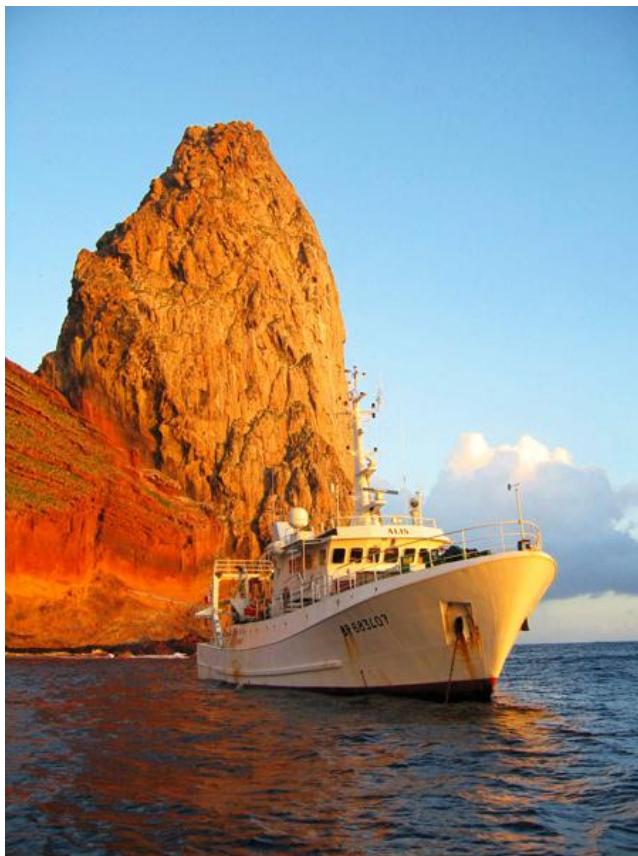

The 2014 cruises are presented below, listed by vessel and indicating spatial location and time period. A full list of cruises in alphabetical order and for all vessels is also provided at the end of the document.

4.3.1.1 Cruises by *Alis*

RV Alis is a 28.50 m trawler operating in the South-West Pacific Ocean from French Polynesia to Papua-New Guinea. The vessel is based in New Caledonia. It is operated by IRD.

It performs oceanographic missions for physics (umbilical cable, shipboard ADCP, etc.), biology (trawling, ER 60 4 frequency echo-sounder, scanmar sensor, etc.) and bathymetrics (EM1002 multibeam echo-sounder). It is also used as a support ship for diving missions (studying biodiversity, etc.).

Here are its main characteristics:

Coastal vessel

4.3.1.2 Cruises by *Antea*

RV Antea is a 35 m-long catamaran operating in the Atlantic and Indian Oceans. The vessel is based in France. It is operated by IRD.

It performs oceanographic missions for physics (umbilical cable, shipboard ADCP, etc.) and biology (trawling, ER 60 4 frequency echo-sounder, scanmar sensor, etc.). It is also used as a support ship for diving missions (studying biodiversity, etc.).

4.3.1.4 Cruises by *Côtes de la Manche*

This oceanographic vessel performs scientific research missions, mainly in the Atlantic Channel area. It can conduct missions lasting about ten days, at distances reaching 200 nautical miles from harbour. This inshore vessel is fitted with instruments and meets the needs of researchers in the fields of marine geosciences, physical and biological oceanography, biogeochemistry and ocean chemistry. It also contributes to long-term marine environmental observation missions and to research and trials missions in various marine technology fields. The vessel can also carry out teaching missions for graduate and post-graduate university levels.

Here are its main characteristics:

4.3.1.5 Cruises by Gwen Drez

The oceanographic research vessel Gwen Drez is a 24.50 metre trawler working in the English Channel and on the continental shelf of the Bay of Biscay. It was built in 1976 in Cherbourg by CMN shipyards, and then bought by Ifremer in 1984 to be converted into a research vessel. It is operated by GÉNAVIR.

It is mainly used for fisheries research missions and also takes part in coastal environmental surveys.

Here are its main characteristics:

Coastal vessel
NODC code: 35GD
Call sign: FZYB
Length 25
Crew: 7
Scientists: 5

4.3.1.6 Cruises by *Haliotis*

The oceanographic launch *Haliotis* provides a mapping platform, based first and foremost on acoustic imaging making it possible to obtain accurate and reliable information about the nature and the morphology of the very shallow coastal fringe. Genavir has been entrusted with managing the vessel.

Here are its main characteristics:

Coastal vessel
NODC code: 35HL
Call sign: FGF5958

4.3.1.7 Cruises by *La Curieuse*

La Curieuse is a "stern trawler" type vessel of 25 metres LOA, and is made available to IPEV 2 to 3 months per year by IOE (*Indian Ocean Exploration*). It provides the local logistics services for land-based scientific programs in the Kerguelen archipelago. It has special equipment and fittings which also enable it to implement coastal oceanography programs in marine biology, ichthyology, hydrography, marine mapping, hydrology, etc. It can also deploy various fishing gear (trawl and trammel net).

Here are its main characteristics:

Coastal vessel
NODC code: 35UC
Call sign: FGAK
Length 26
Crew: 6
Scientists: 12

Owned by TAAF - Managed by IPEV

4.3.1.8 Cruises by *L'Astrolabe*

L'Astrolabe is a 65 m-long "ice strengthened" supply ship serving the Dumont d'Urville base in Adélie Land. It can embark 49 passengers and several hundred tonnes of food supplies, fuel and equipment. Each year, it is used by IPEV for 120 days, regularly ensuring 5 return trips (*November to March*) over a distance of 2,700 km between Tasmania and the Antarctic continent.

L'Astrolabe is also used for coastal oceanographic surveys of short duration in the Antarctic.

Here are its main characteristics:

Ocean-going vessel
NODC code: 35AC
Call sign: FHZI
Length 65
Crew: 12
Scientists: 48

Co-owned by TAAF / IPEV - Managed by IPEV

4.3.1.10 Cruises by *Le Suroît*

Built in 1975, *Le Suroît* was upgraded in 1999. The refitting of the ship made it possible to totally upgrade all its scientific equipment. The performances of this equipment are consistent with refocused cruises on the continental shelf, to the bottom of the slope, limited to depths of 4000/4500 m.

- bathymetry
- core sampling, dredging, beam trawling
- high and very high resolution seismics
- CTD/hydrology
- towed SAR-type vehicles
- moorings, station work

Here are its main characteristics:

Ocean-going vessel

4.3.1.11 Cruises by *L'Europe*

This oceanographic research vessel is a 29.60 metre-long catamaran operating in the Mediterranean Sea. The outcome of cooperation between Ifremer and ICRAM (the Italian Central institute for applied marine research), it was built in 1993 at Sables d'Olloannes (OCEA) in France.

It is designed to perform a range of missions, in particular related to fisheries research and the coastal environment. It is used for conventional deep-sea trawling (reaching 1,300 metres), pelagic and experimental trawling, deploying set gear (gill nets, longlines, pots, etc.), seismic studies, sedimentology and hydrological sampling.

Here are its main characteristics:

Coastal vessel
NODC code: 35EU
Call sign: FKJB
Length 30
Crew: 8
Scientists: 8

4.3.1.12 Cruises by *Marion Dufresne*

RV Marion Dufresne is a multi-purpose research vessel launched in 1995, commissioned by CMA-CGM and jointly chartered by TAAF and IPEV. It provides two main functions:

- **oceanographic research:** on every ice-free ocean, under the responsibility of IPEV - 217 days a year.
- **logistics for French sub-Antarctic islands:** Crozet, Kerguelen, Amsterdam/Saint-Paul, under the responsibility of TAAF – 120 days per year (4 x 30 days).

Here are its main characteristics:

Ocean-going vessel

NODC code: 35MF

Call sign: FNIN

Length 120.5

Crew: 18/29

Scientists: 60/110

Owned by TAAF - Managed by IPEV

4.3.1.13 Cruises by Néréis II

RV *Néréis II*'s activity is in great part focused on the Côte Vermeille area, from the coast to the MOLA point located directly above the Lacaze Duthiers canyon 20 nautical miles off Banyuls sur Mer in Roussillon. Néréis performs missions for research, observation, teaching, and aquariology as well as those of scientific mediation and for marine technology, with the Observatory's pool of instrumented buoys to be maintained. The gear most often used on board includes dredges, grabs, plankton nets, bottles, CTDs, corers, etc.

Here are its main characteristics:

Station's boat
NODC code: 35NS
Call sign: FGA3812
Length 14
Crew: 4
Scientists: 11

4.3.1.14 Cruises by *Pourquoi pas?*

This multidisciplinary vessel is intended for the following missions:

- Offshore and inshore hydrography with deployment of hydrographic survey launches
- Exploring the water column, currents
- Underwater mapping using its sounders and sub-seabed characterization (seismics, gravimetry, magnetism)
- Multi-scale study of physical, biological or geological processes
- Surveying of sites using acoustic equipment, deployment of towed (SAR), remotely operated (Victor 6000) or autonomous (Nautile) vehicles, positioning heavy equipment near the seabed using cable (Penfeld)
- Collecting and analyzing samples of water, living matter, sediments or rocks (coring, dredge)
- Deploying the Navy's Newtsuit assistance system to rescue submarines in difficulty.

Here are its main characteristics:

Ocean-going vessel

4.3.1.15 Cruises by *Téthys II*

This oceanographic vessel performs scientific research missions, mainly in the Mediterranean Sea. It can conduct missions lasting about ten days, at distances reaching 200 nautical miles from harbour. This inshore vessel is fitted with instruments and meets the needs of researchers in the fields of marine geosciences, physical and biological oceanography, biogeochemistry and ocean chemistry. It also contributes to long-term marine environmental observation missions and to research and trials missions in various marine technology fields. The vessel can also carry out teaching missions for graduate and post-graduate university levels.

Here are its main characteristics:

Coastal vessel
NODC code: 35TT
Call sign: FGTO

4.3.2 Cruises not referenced at SISMER (station vessels)

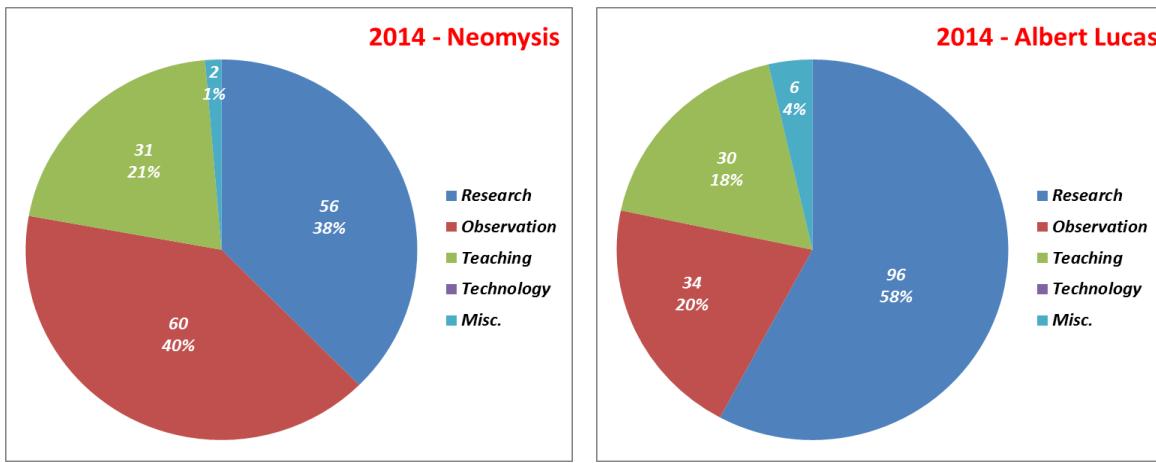

The 6 station vessels go out for the day, or even for just a few hours. However, their activity is far from negligible. While awaiting the information needed to reference them at SISMER, the CNFC has the following report:

The table below shows the distribution of days at sea by vessel and by field of activity. For RV Néréïs, this is given in the number of outings at sea (and not in the number of days).

2014	Year	Research	Observing	Teaching	Technology	Miscellaneous	Total
Marine station	Vessel						
Banyuls	Néréïs	193	53	66	14	55	381
Marseilles	Antedon	77	31	20	0	5	133
Arcachon	Planula	104	24	45	0	7	180
Wimereux	Sepia	20	46	7	3	0	76
Roscoff	Neomysis	56	60	31	0	2	149
Brest	Albert Lucas	96	34	30	6	0	166
	Total	546	248	199	23	69	1085

The graphs below show the distribution of days at sea by vessel (or outings in the case of RV Néréïs) broken down by field of activity. Sea outings in their great majority are devoted to research and marine observations.

4.4 CRUISES LIST

The alphabetical list of cruises performed in 2014 is given below.

Information about each cruise can be accessed via the WEBSITE Nautilus <http://www.ifremer.fr/sismerData/jsp/campagnesALaMer.jsp> by clicking [CTRL + left click] on the name of the cruise.

Cruise	Vessel	Start date	End date	Geographical area	Name of chief scientist	Chief scientist's laboratory
<u>AMOP</u>	<i>L'Atalante</i>	25 01 2014	23 02 2014	SE Pacific(140 W Boundary)	MAES Christophe	LEGO5 SPATIAL GEOPHYSICS AND OCEANOGRAPHY LABORATORY, CNRS
<u>APEX</u>	<i>Alis</i>	30 01 2014	13 02 2014	Coral Sea	VIGLIOLA Laurent	IRD NOUMEA CENTER, IRD
<u>ASPEX6</u>	<i>Thalia</i>	27 07 2014	29 07 2014	Bay of Biscay	MARIE Louis	OPS/LPO- OCEAN PHYSICS LABORATORY, Ifremer
<u>AWA</u>	<i>Thalassa</i>	26 02 2014	14 03 2014	Atlantic Ocean	BREHMER Patrice	MARINE ENVIRONMENTAL SCIENCES LABORATORY (LEMAR), CNRS

6 Acronyms

ADCP	Acoustic Doppler Current Profiler
BSH/DOD	Federal maritime and hydrographic agency of Germany / German oceanographic data centre
CNEXO	National centre for ocean exploitation
CNFC	National coastal fleet commission
CNFH	National ocean-going fleet commission
CNRS	National centre for scientific research
COSS	Strategic and scientific orientation council
CSR	Cruise Summary Report (formerly called ROSCOP)
CTD	Conductivity Temperature Depth
DMON/PF	Division of seagoing facilities and operations / Fleet scheduling
GENAVIR	Research vessel management (IFREMER group)
ICES	International Council for the Exploration of the Sea
IDM	IT and Marine Data Department
IEO	Spanish oceanography institute
IFREMER	French research institute for exploitation of the sea (formerly ISTPM-CNEXO)
IFRTP	French polar research and technology institute
IMN	Marine and digital infrastructure department
INSU	National institute for sciences of the universe
IOC	Intergovernmental Oceanographic Commission
IODE	International Oceanographic Data and Information Exchange
IPEV	Paul Emile Victor French polar institute
IRD	French research institute for cooperative development (formerly ORSTOM)
ISI	Information systems engineering
ISTPM	Scientific and technical institute for marine fisheries
JSU	Joint service unit
MNHN	National museum of natural history
OFEG	Ocean Facilities Exchange Group
ORSTOM	Overseas France office of scientific and technical research
ROV	Remote Operated Vehicle
SHOM	French navy hydrographic and oceanographic service
SISMER	Marine scientific information systems
UNESCO	United Nations Educational, Scientific and Cultural Organization
XBT	Expendable BathyThermograph
