January 14, 2016

Float WMO 6900496

# 1 Presentation and DMQC summary

Number	Deployment (cycle OD) cycle OD	Last cycle 168
Provor WMO 6900496	21/06/08 6H30	
CTS3 07-S3-12	N 47.668 W 20.5	
Date of control	Float status	Last cycle
January 2011	Active	93
Coriolis transmission		20/01/2011
Date of last control	Float status	Last cycle
September 2015	DEAD	28/01/2013
Coriolis transmission		26/10/15

Table 1: Status of the float

**Warning :** Note that all the figures are plotted with the latest QC flag values (the modifications mentioned table 2 are taken into account).

## 1.1 QC flag checks and interesting profiles

Cycle	Parameter	Vertical level	Old flag	New flag	Comments	Coriolis transm
36	PSAL	entire profile	4	1		17/01/11
37	PSAL,TEMP	700-1050 dbar	4	1		17/01/11
91	TEMP	2 values (400 dbar)	4	1		17/01/11
91	PSAL	levels 36,37,40,41	1	4		17/01/11
93	PSAL	66 to 276 dbar	3	4		17/01/11
all cycles (except 0D)	PSAL	level 1	1	4		17/01/11
all cycles (except 0D,14A,48A,88A)	PSAL PSAL	level 2	1	4		17/01/11 17/01/11
135	TEMP	156, 166 dbar	4	1		26/10/15
		226, 236 dbar	4	1		26/10/15
135	PSAL	166 to 296 dbar	1	4		26/10/15

Table 2: Float 6900496. Summary of the modifications of the real-time QC flags and of the interesting or suspicious data.

Warning : the resolution is equal to 10 dbar from the surface to 800 dbar, then 25 dbar from 500 to 2000 dbar. Salinity data between 0 and 5 dbar are suspicious because they are acquired when the pump of the CTD is turned off.

## 1.2 Salinity correction from the OW method

We cannot see any evidence of a drift or bias in the salinity measurement. We thus conclude that it is not necessary to correct the salinity data. Errors bars are maximum value between 0.01 and those determined from the OW method with parameters from the OW configuration 129.

OW CONFIGURATION	129
CONFIG.MAX_CASTS	250
MAP_USE_PV	1
MAP_USE_PV_ELLIPSE	1
MAP_USE_FACTEUR	1
MAPSCALE_LONGITUDE_LARGE	3.2
MAPSCALE_LONGITUDE_SMALL	0.8
MAPSCALE_LATITUDE_LARGE	2
MAPSCALE_LATITUDE_SMALL	0.5
MAPSCALE_PHI_LARGE	0.1
MAPSCALE_PHI_SMALL	0.02
MAPSCALE_AGE	0.69
MAP_P_EXCLUDE	500
MAP_P_DELTA	250
Reference data base	CTD and ARGO

Table 3: Parameters of the OW method.

## 2 Data

Figure 1: Profiles position and relationship between cycle number, date and color.

Figure 2: Battery Voltage and Surface Pressure

Figure 3:  $\theta/S$  diagrams. (Left panel) Flags are not taken into account. (Right panel) Quality flags are taken into account.

Figure 4: Temperature section along the float trajectory. Quality flags are not taken into account.

Figure 5: Salinity section along the float trajectory. Quality flags are not taken into account.

Figure 6: Pression as fonction of cycle number and vertical level index along the float trajectory. Quality flags are taken into account.

Figure 7: Potential temperature, salinity and potential density sections along the float trajectory (interpolated on standard levels). Quality flags are taken into account.

Figure 8: Salinity, Potential Temperature and Potential Density profiles. Quality flags are taken into account.

### 3 Comparison to the OVIDE 2008 nearest CTD profile

Figure 9: Comparison of the cycle 0A with the nearest CTD profile done after the float deployment.

## 4 Cycle 36 - Comparison to the nearest historical CTD profiles

Figure 10: Flotteur 6900496, cycle 36. Upper panel: Position of the analysed CTD profile (red) and of the nearest CTD profiles (black). The nearest CTD profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed CTD profile (stars) and for the nearest CTD profile in time (magenta line) and for the nearest CTD profile in space (blue line). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

6900496 – Cycle 36A – Date Argo profile 18–Jun–2009  
 Dates historical profiles 27–Jun–2004 (blue) and 18–Jun–2008 (magenta)

Figure 11: Float 6900496, cycle 36. The analysed CTD profile (stars) is compared to the nearest CTD profiles (black line) and to two specific profiles: the nearest CTD profile in time (magenta) and the nearest CTD profile in space (blue). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 5 Cycle 36A - Comparison to the nearest ARGO profiles

Figure 12: Flotteur 6900496, cycle 36A. Upper panel: Position of the analysed Argo profile (red) and of the nearest Argo profiles (black). The nearest Argo profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed Argo profile (stars) and for the nearest Argo profile in time (magenta line) and for the nearest Argo profile in space (blue line). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

Figure 13: Float 6900496, cycle 36A. The analysed Argo profile (stars) is compared to the nearest Argo profiles (black line) and to two specific profiles: the nearest Argo profile in time (magenta) and the nearest Argo profile in space (blue). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 6 Cycle 37 - Comparison to the nearest historical CTD profiles

Figure 14: Flotteur 6900496, cycle 37. Upper panel: Position of the analysed CTD profile (red) and of the nearest CTD profiles (black). The nearest CTD profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed CTD profile (stars) and for the nearest CTD profile in time (magenta line) and for the nearest CTD profile in space (blue line). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

Figure 15: Float 6900496, cycle 37. The analysed CTD profile (stars) is compared to the nearest CTD profiles (black line) and to two specific profiles: the nearest CTD profile in time (magenta) and the nearest CTD profile in space (blue). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 7 Cycle 37A - Comparison to the nearest ARGO profiles

Figure 16: Flotteur 6900496, cycle 37A. Upper panel: Position of the analysed Argo profile (red) and of the nearest Argo profiles (black). The nearest Argo profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed Argo profile (stars) and for the nearest Argo profile in time (magenta line) and for the nearest Argo profile in space (blue line). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

Figure 17: Float 6900496, cycle 37A. The analysed Argo profile (stars) is compared to the nearest Argo profiles (black line) and to two specific profiles: the nearest Argo profile in time (magenta) and the nearest Argo profile in space (blue). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 8 Cycle 91 - Comparison to the nearest historical CTD profiles

Figure 18: Flotteur 6900496, cycle 91. Upper panel: Position of the analysed CTD profile (red) and of the nearest CTD profiles (black). The nearest CTD profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed CTD profile (stars) and for the nearest CTD profile in time (magenta line) and for the nearest CTD profile in space (blue line). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

6900496 – Cycle 91A – Date Argo profile 20-Dec-2010  
 Dates historicals profiles 11-Jan-2000 (blue) and 11-Jan-2000 (magenta)

Figure 19: Float 6900496, cycle 91. The analysed CTD profile (stars) is compared to the nearest CTD profiles (black line) and to two specific profiles: the nearest CTD profile in time (magenta) and the nearest CTD profile in space (blue). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 9 Cycle 91A - Comparison to the nearest ARGO profiles

Figure 20: Flotteur 6900496, cycle 91A. Upper panel: Position of the analysed Argo profile (red) and of the nearest Argo profiles (black). The nearest Argo profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed Argo profile (stars) and for the nearest Argo profile in time (magenta line) and for the nearest Argo profile in space (blue line). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

Figure 21: Float 6900496, cycle 91A. The analysed Argo profile (stars) is compared to the nearest Argo profiles (black line) and to two specific profiles: the nearest Argo profile in time (magenta) and the nearest Argo profile in space (blue). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 10 Cycle 93 - Comparison to the nearest historical CTD profiles

Figure 22: Flotteur 6900496, cycle 93. Upper panel: Position of the analysed CTD profile (red) and of the nearest CTD profiles (black). The nearest CTD profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed CTD profile (stars) and for the nearest CTD profile in time (magenta line) and for the nearest CTD profile in space (blue line). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

Figure 23: Float 6900496, cycle 93. The analysed CTD profile (stars) is compared to the nearest CTD profiles (black line) and to two specific profiles: the nearest CTD profile in time (magenta) and the nearest CTD profile in space (blue). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 11 Cycle 93A - Comparison to the nearest ARGO profiles

Figure 24: Flotteur 6900496, cycle 93A. Upper panel: Position of the analysed Argo profile (red) and of the nearest Argo profiles (black). The nearest Argo profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed Argo profile (stars) and for the nearest Argo profile in time (magenta line) and for the nearest Argo profile in space (blue line). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

Figure 25: Float 6900496, cycle 93A. The analysed Argo profile (stars) is compared to the nearest Argo profiles (black line) and to two specific profiles: the nearest Argo profile in time (magenta) and the nearest Argo profile in space (blue). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 12 Cycle 135 - Comparison to the nearest historical CTD profiles

Figure 26: Flotteur 6900496, cycle 135. Upper panel: Position of the analysed CTD profile (red) and of the nearest CTD profiles (black). The nearest CTD profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed CTD profile (stars) and for the nearest CTD profile in time (magenta line) and for the nearest CTD profile in space (blue line). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

Figure 27: Float 6900496, cycle 135. The analysed CTD profile (stars) is compared to the nearest CTD profiles (black line) and to two specific profiles: the nearest CTD profile in time (magenta) and the nearest CTD profile in space (blue). The color of the analysed CTD profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

### 13 Cycle 135A - Comparison to the nearest ARGO profiles

Figure 28: Flotteur 6900496, cycle 135A. Upper panel: Position of the analysed Argo profile (red) and of the nearest Argo profiles (black). The nearest Argo profile in time is in magenta while the nearest CTD profile in space is in blue. Lower panels: Temperature, salinity and potential density as function of pressure for the analysed Argo profile (stars) and for the nearest Argo profile in time (magenta line) and for the nearest Argo profile in space (blue line). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4).

6900496 – Cycle 135A – Date Argo profile 04–Mar–2012  
 Dates historicals profiles 19–Aug–2002 (blue) and 18–Mar–2011 (magenta)

Figure 29: Float 6900496, cycle 135A. The analysed Argo profile (stars) is compared to the nearest Argo profiles (black line) and to two specific profiles: the nearest Argo profile in time (magenta) and the nearest Argo profile in space (blue). The color of the analysed Argo profile represents the QC flag (green for a QC=1; blue for a QC=2; orange for a QC=3 and red for a QC=4). (Upper panels) Temperature (left panel), salinity (middle panel) and potential density (right panel) as function of pressure. (Lower panels)  $\theta/S$  diagrams.

## 14 OW method, CONFIGURATION # 129

Figure 30: Figures from the OW method. (Left) Position of the historical and float data. (Right) Comparison, on various  $\theta$  levels, between the float data and the historical data interpolated at the float position.

Figure 31: Figures from the OW method. Comparison of the  $\theta/S$  diagram of the float with the historical database. (left) raw data; (right) corrected data using the OW correction.

Figure 32: Figures from the OW method. Salinity anomaly:(left) raw data; (right) corrected data using the OW correction.

Figure 33: Correction proposed by the OW method.

Figure 34: Chosed levels by the OW method.
