Supplementary Materials: Anti-Metastatic Properties of a Marine Bacterial Exopolysaccharide-Based Derivative Designed to Mimic Glycosaminoglycans

Dominique Heymann, Carmen Ruiz-Velasco, Julie Chesneau, Jacqueline Ratiskol, Corinne Sinquin and Sylvia Colliec-Jouault

Figure S1. Oversulfated exopolysaccharide (OS-EPS) derivative did not induce pro-apoptotic effect compared to heparin and control group. Apoptotic cells in primary bone tumor were determined using the in situ cell death detection kit (Roche Diagnostics), based on the terminal-deoxynucleotidyl transferase–mediated dUTP nick-end labeling (TUNEL) method. Tumor masses were characterized by peripheral proliferation area centered by necrotic foci (*). Apoptotic cancer cells were observed at the border between proliferation and necrotic areas (arrow). Original magnification: ×100 (right panels); ×200 (left panels).
