Figure S1: Time series of the contribution of organic matter sources to the coastal POM pool in the station Antioche with Gironde (dashed black line) and Charente (solid black line) flows.

9

	Station	Model ($\delta^{15}\text{N} =$ (‰))	uncertainty
Eng. Channel	Côte	$6.997 - 0.178 (1+\ln(f))$	1.5
	Large	$6.682 - 0.307 (1+\ln(f))$	1.2
	Luc/mer	$6.895 - 0.523 (1+\ln(f))$	1.5
	Bizeux	$5.582 - 0.339 (1+\ln(f))$	0.8
	Estacade	7.0	1.0
	Astan	6.9	1.4
Atl. Ocean	Portzic	$5.833 - 0.242 (1+\ln(f))$	0.9
	Antioche	$4.838 - 0.328 (1+\ln(f))$	1.8
	Comprian	$5.396 - 1.404 (f)$	1.2
	Eyrac	$5.038 - 0.227 (1+\ln(f))$	1.2
Med.	Bouée13	$5.169 - 0.314 (1+\ln(f))$	0.9
	Sola	4.0	1.2
	Frioul	3.3	1.1
	PointB	3.2	1.3

$$f = [\text{NO}_3^-]_t / [\text{NO}_3^-]_{\max}$$

$[\text{NO}_3^-]_t$: nitrate concentration at a given time (t)

$[\text{NO}_3^-]_{\max}$: the most recent maximum of nitrate concentration (usually observed during previous winter)

10

11

12 Table S1: Model equations used for estimating phytoplankton $\delta^{15}\text{N}$. Uncertainty is standard deviation of
13 model residuals. Eng. Channel: English Channel, Atl. Ocean : Atlantic Ocean, Med. : Mediterranean Sea.

19

20

21 Table S2: Model equations or mean value used for estimating river-POM C:N ratio, $\delta^{13}\text{C}$ and $\delta^{15}\text{N}$. Q is
 22 the river flow. Uncertainty is the standard deviation of model residuals or standard deviation of raw data.

23

24

25 Table S3: Signatures (C/N ratio, $\delta^{13}\text{C}$, $\delta^{15}\text{N}$) of the organic matter sources. sd: standard deviation.
 26 Signatures used for running the mixing models are modelled data or mean values when model was not
 27 significant. * calculated following Savoye et al. (2012). For the Gironde estuary, phytoplankton signature
 28 ranges from freshwater to marine phytoplankton.

29
