

Figure 2. PCO analysis of the total macrofauna community at the three sites (B6S02, B4S03 and B4N01) based on a Bray-Curtis resemblance matrix of fourth-root transformed abundance data. No site effect on the total macrofauna community composition could be observed (1-factor Permanova, $\text{pseudo-}F_{2,9} = 1.25, p_{\text{PERM}} = 0.11$)
