

Figure 3. PCO analysis of the polychaete community at the three sites (B6S02, B4S03 and B4N01) based on a Bray-Curtis resemblance matrix of fourth-root transformed abundance data. No site effect on the polychaete community composition could be observed (1-factor Permanova, $\text{pseudo-}F_{2,9} = 1.085$, $p_{\text{PERM}} = 0.37$)
