

Table 4. PCO analysis of the isopod community at the three sites (B6S02, B4S03 and B4N01) based on a Bray-Curtis resemblance matrix of fourth-root transformed abundance data. No site effect on the isopod community composition could be observed (1-factor Permanova, pseudo- $F_{2,9} = 0.9296$, $p_{\text{PERM}} = 0.54$)
