

## **Appendix 2**

Additional technical information on Seaorbiter. SeaOrbiter is a vessel allowing a 24/7 exploration on long-term missions of the open sea and the abyss. Inspired by Nature, it has been designed based on biomimicry principles, using the imitation of models, systems and elements of nature in order to create a slow pace drifting vessel. SeaOrbiter is a scientific platform that gives us a direct insight into the ecosystem of the open ocean, thanks to its capabilities of uninterrupted continuous observation and analysis of physiochemical parameters. The vessel is designed to evolve in a quiescent mode to better capture a great variety of physical and ecological data.

**INITIATIVES**

- \*1: Health & Nutrition
- \*2: Biodiversity & Biomimicry
- \*3: Ocean & Climate
- \*4: Environment & Anthropism
- \*5: Technology & Innovation
- \*6: Energies & Mineral Resources
- \*7: Deep Sea Explorations
- \*A: Many initiatives
