Supplementary Figure 1. Work flow regarding growth and respiration rates derived from O₂ measurements in Fe-replete and Fe-limiting conditions (I), and cell counts (II) in order to derive O₂ curves (III, IV) where the derivative of ΔO₂ is fitted into a formula (V, VI) and plotted for verification (VII, VIII).

Supplementary Figure 2: average ΔO_2 rates every 10 minutes during the exponential growth phase of wt (black), Δicl (white) and icl^+ (grey) subjected to Fe-limitation (100 μM DFOB)
