Introduction

PAAS-normalized REE patterns of authigenic (foraminifera, leachates) and residual fraction of cores MD04-2722 and MD04-2797CQ as well as raw ϵ Nd data are presented in supporting information.

Figure S1. PAAS-normalized REE patterns of authigenic (foraminifera: circle, leachate: open square) fraction from cores MD04-2722 (red) and MD04-2797CQ (green). Some REEs are not shown because of low concentration (Tb, Ho, Tm and Lu) or heavy isobaric interferences (ex. BaO on Eu).

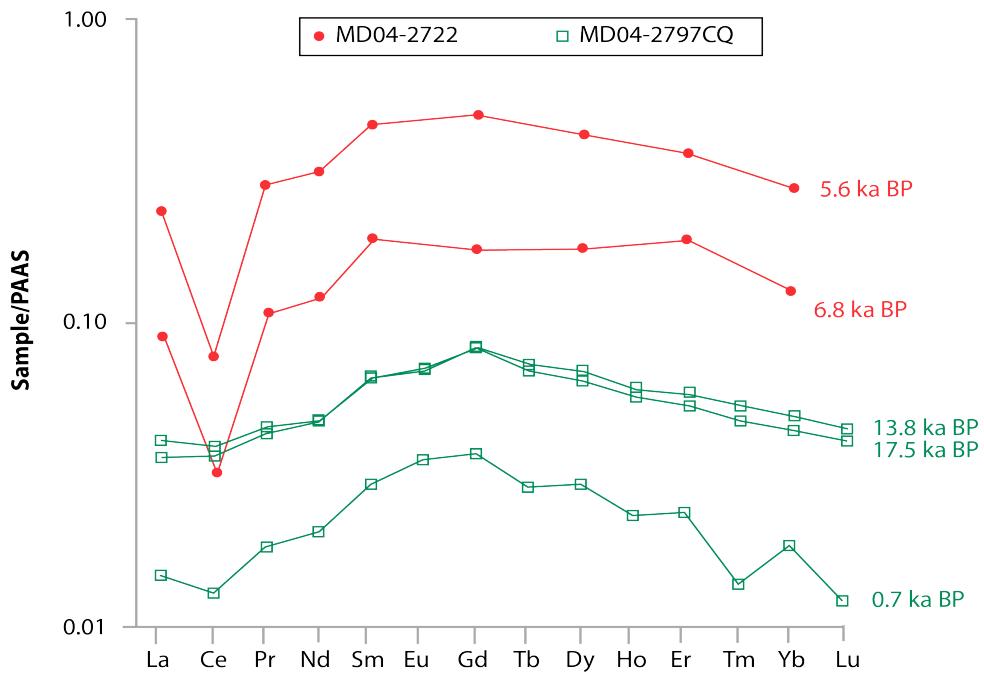

Figure S2. PAAS-normalized REE patterns of residual fraction from core MD04-2797CQ (green cross symbols). Residual fraction was not weighed and REE dilution by CaCO_3 was corrected using leachate results.

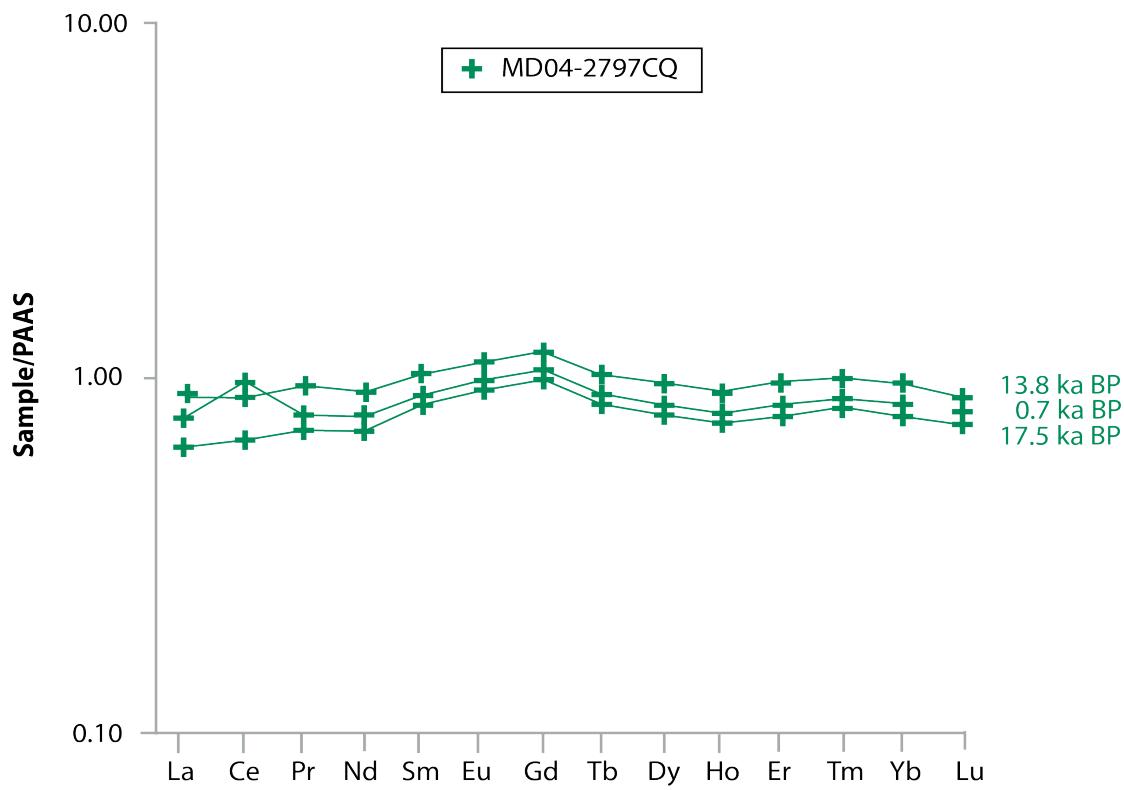

Table S1. Raw data of $\varepsilon_{\text{Nd auth}}$ measured on foraminifera and bulk sediment leachates from core MD04-2797CQ. Replicates are indicated by a/b.

Table S2. Raw data of authigenic ε_{Nd} measured on foraminifera and bulk sediment leachates from core MD04-2722. Replicates are indicated by a/b.

Depth (cm)	Age (ka BP)	Authigenic fraction			
		Foraminifera	Leachate	ε_{Nd}	2σ
