Figures S1 to S2
Tables S1 to S4

Introduction

This supporting information provides figures presenting data plotted for each station separately and tables reporting data for stations, presenting results of statistical analyses and overview of C_{org} accumulation data in North Atlantic and Arctic localities from this study and literature.

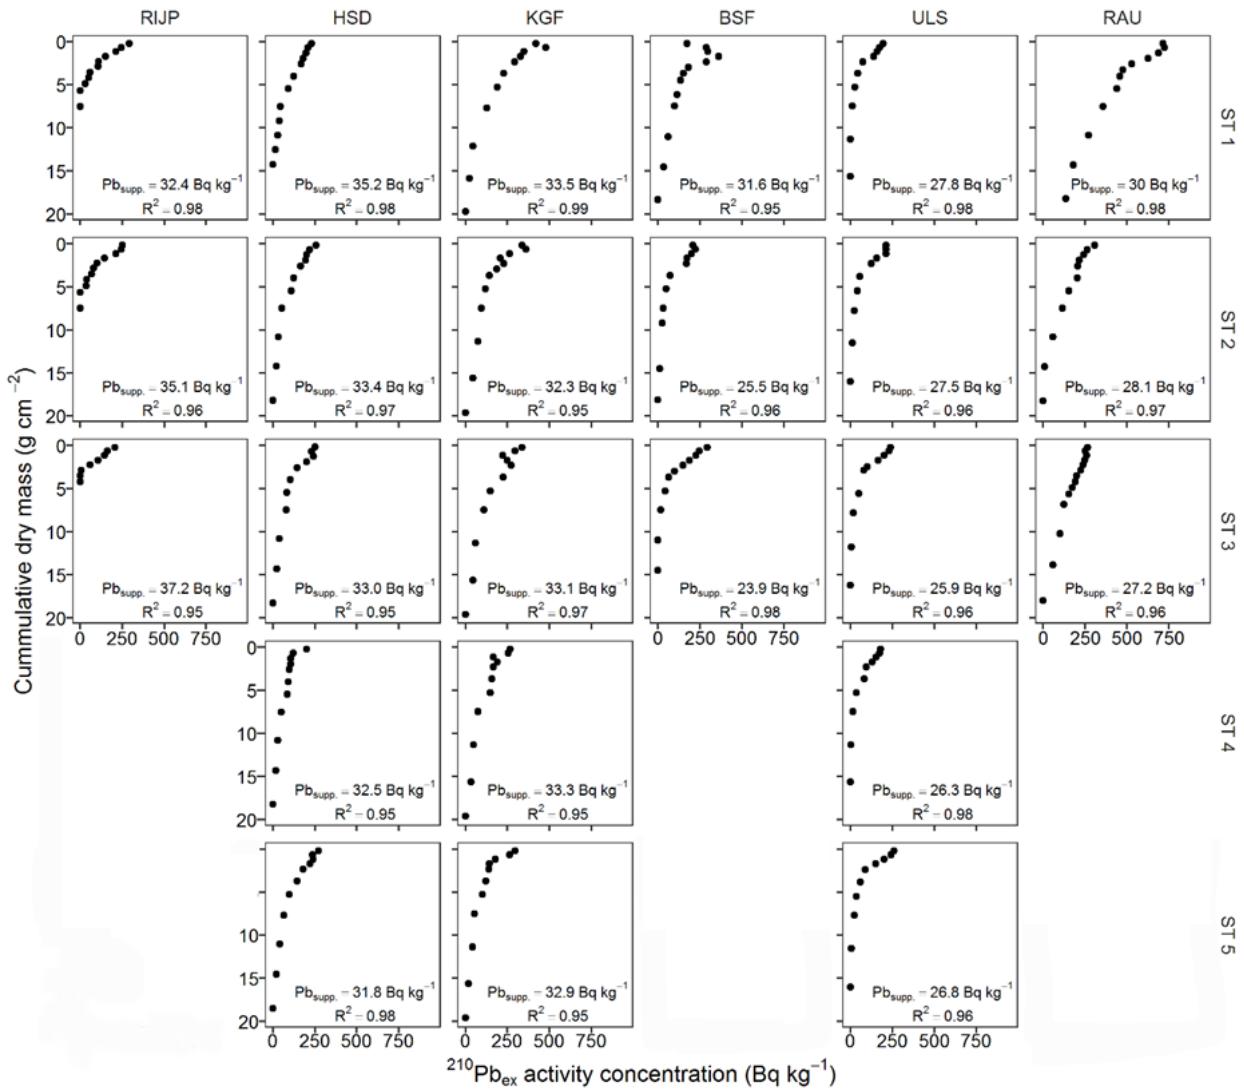

Figure S1. The total ²¹⁰Pb_{ex} activity concentration [Bq kg⁻¹] profiles versus cumulative dry sediment mass at stations in fjords. The supported ²¹⁰Pb (²²⁶Ra) are given at the graphs together with determination coefficient (R^2) of sediment accumulation rate modeling. RIJP-Rijpfjord, HSD- Hornsund, KGF- Kongsfjord, BSF- Balsfjord, ULS-Ullsfjord, RAU- Raunefjord.

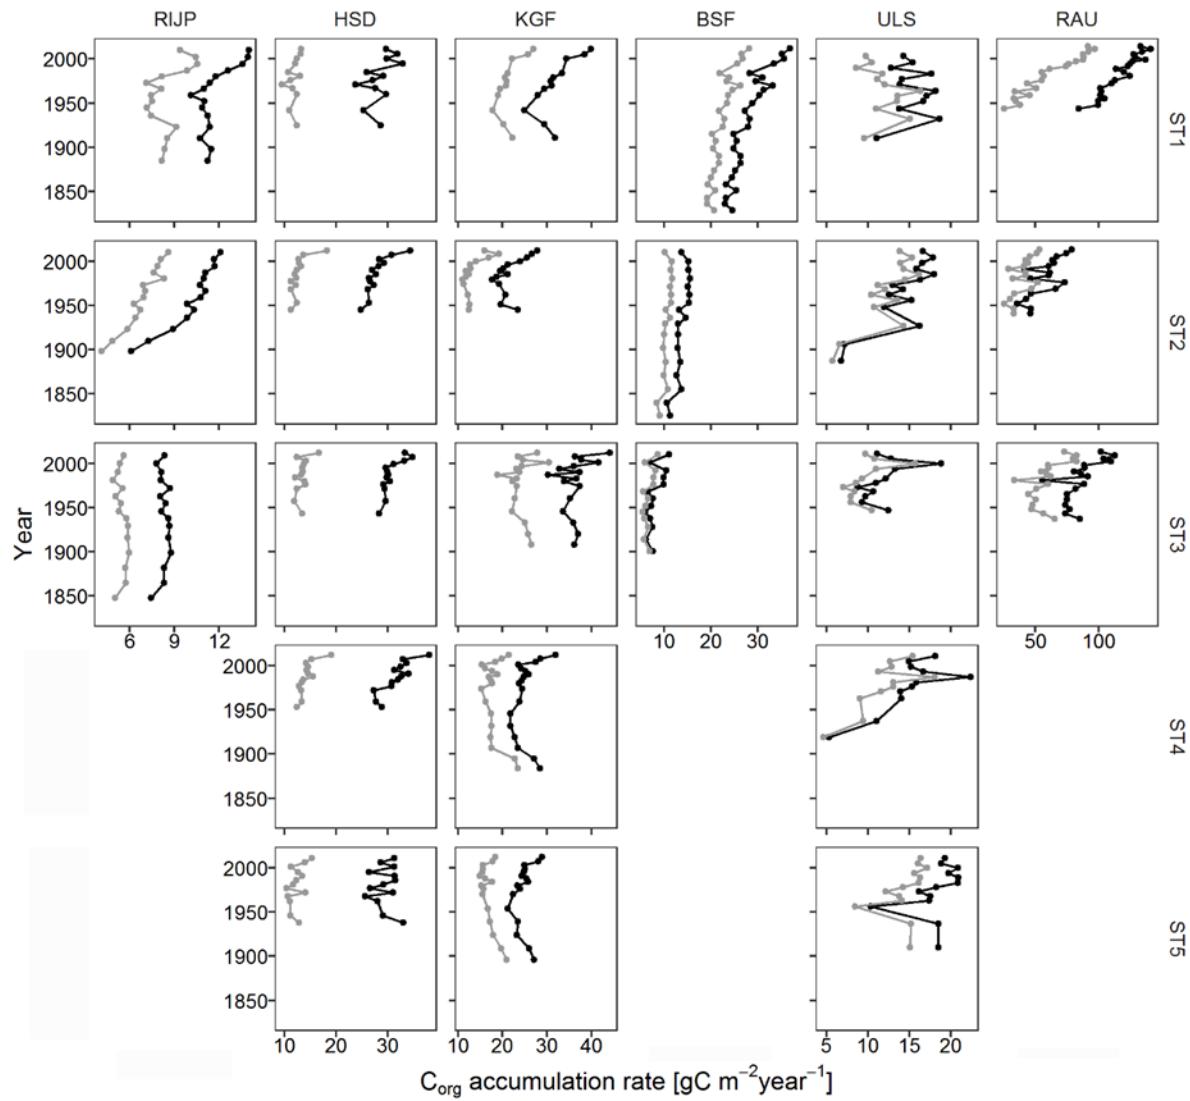

Figure S2. Organic carbon accumulation rate [$\text{gC m}^{-2} \text{ yr}^{-1}$] versus sediment layer deposition year at stations in fjords. Black lines represent total C_{org} accumulation rate while grey lines represent accumulation rate of C_{org} of marine origin (estimated using two end-members method based on $\delta^{13}\text{C}$ results). RIJP-Rijpfjord, HSD-Hornsund, KGF-Kongsfjord, BSF-Balsfjord, ULS-Ullsfjord, RAU-Raunefjord.

Table S1. Values of environmental parameters in sediments (0-20 cm): mud [%], organic carbon (C_{org} [$mg\ g^{-1}$]), $\delta^{13}C$ [%], chlorophyll a (chl a [$\mu g\ g^{-1}$]) and chloroplastic pigment equivalent (CPE [$\mu g\ g^{-1}$]) content. Mean and SD for each fjord are provided, with results of Permanova test for differences among fjords (main and post-hoc tests, only non-significant effects). RIJP-Rijpfjord, HSD-Hornsund, KGF-Kongsfjord, BSF- Balsfjord, ULS-Ullsfjord, RAU-Raunefjord.

Table S4. Organic carbon content (C_{org}) mass sediment accumulation rates (MAR), organic carbon accumulation ($C_{org}AR$) and burial rates ($C_{org}BR$) in North Atlantic and Arctic fjords and shelf sediments based on this study and literature data. $C_{org}BR$ estimates are based on C_{org} content in the deepest layer (around or below 20cm depth). * indicates that $C_{org}AR$ or $C_{org}BR$ was calculated using MAR and C_{org} concentration data available in the cited paper. Literature data include data on sediments deposited within last century and dated by ^{210}Pb method (as in the present study).
