Supplementary Table S1. Determination of *Symbiodinium* clade via BLASTn

Chloroplast Partial 23S rRNA gene	Host organism	Identity (%)	Site (bp)	E value
<i>Symbiodinium</i> Clade C1	<i>P.cactus</i>	100	623	0.0
	<i>T.reniformis</i>	99	599	0.0
	<i>P.damicornis</i>	99	623	0.0
	<i>G.fascicularis</i>	99	621	0.0
<i>Symbiodinium</i> Clade D1	<i>H.fuscescens</i>	99	718	0.0

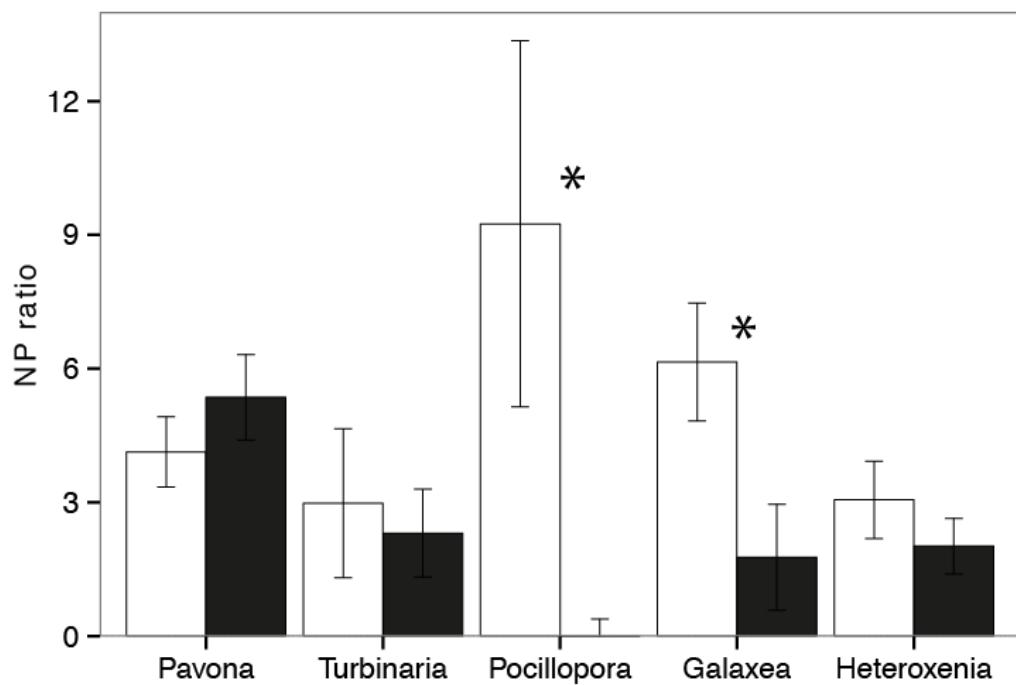

Supplementary Table S2. Nutrient uptakes normalized by zooxanthellae density

The uptake of nutrients (NH_4 , NO_3 and PO_4 ; $\mu\text{mol of Nutrient (Nb Zoox)}^{-1} \text{ h}^{-1}$) normalized by the density of zooxanthellae according to the different coral species and the temperature steps (25°C and 30°C). Significant differences due to temperature were highlighted by an asterisk(*)

Species	Temperature	NH_4 uptake	STDEV	NO_3 uptake	STDEV	PO_4 uptake	STDEV
<i>P.cactus</i>	T25	2.84E-08	1.58E-08	*2.23E-07	8.53E-08	7.1E-08	3.54E-08
	T30	5.19E-08	1.68E-08	1.04E-07	2.07E-08	4.93E-08	1.56E-08
<i>H.fuscescens</i>	T25	4.45E-08	1.77E-08	1.24E-07	1.76E-07	*2.9E-08	5.72E-09
	T30	1.21E-07	5.06E-08	1.22E-07	4.48E-08	1.32E-07	7.57E-08
<i>T.reniformis</i>	T25	8.99E-08	4.88E-08	3.04E-07	1.93E-07	*1.01E-08	5.02E-09
	T30	8.72E-08	2.44E-08	9.01E-08	3.36E-08	7.1E-08	1.85E-08
<i>P.damicornis</i>	T25	1.09E-07	3.04E-08	9.66E-08	2.25E-08	*3.65E-08	9.39E-09
	T30	1.05E-07	3.69E-08	1.52E-07	7.12E-08	1.84E-09	1.29E-09
<i>G.fascicularis</i>	T25	3.92E-08	2.75E-08	1.45E-07	4.84E-08	*2.01E-08	6.54E-09
	T30	4.25E-08	2.22E-08	9.71E-08	1.51E-08	4.11E-08	6.54E-09

Supplementary Figure S3. N-uptake: P-uptake

Ratio of total nitrogen (NH_4+NO_3) uptake on phosphorus uptake that have been previously normalized by μmol of N ($\text{mg prot}^{-1} \text{ h}^{-1}$), according to the different coral species and the temperature steps. Significant effects of temperature were highlighted by an asterisk (*). Temperature steps ($T25^\circ\text{C}$ and $T30^\circ\text{C}$) are represented by white and black bars, respectively.

Supplementary Table S4. Uptake of inorganic nutrients by *H.fuscescens*

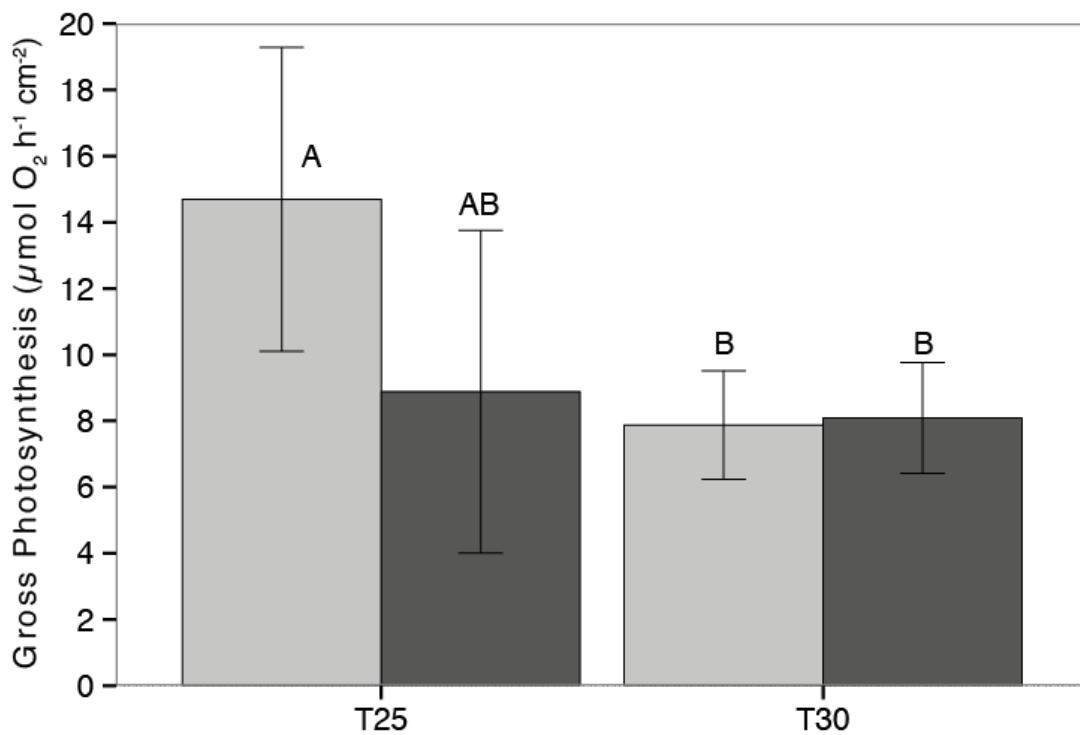

Uptake of inorganic nutrients (NH4, NO3, PO4)

in umol of nutrients (mg prot)-1mn-1. Significant effects of clove oil solution in decreasing polyp pulsation were highlighted by an asterisk (*).

Treatment	Mean	STDEV
NH4	0.023383	0.006532
NH4 EO	0.010009*	0.001504
NO3	0.010998	0.00374
NO3 EO	0.005465*	0.001504
PO4	0.000471	0.000104
PO4 EO	0.0003	8.96E-05

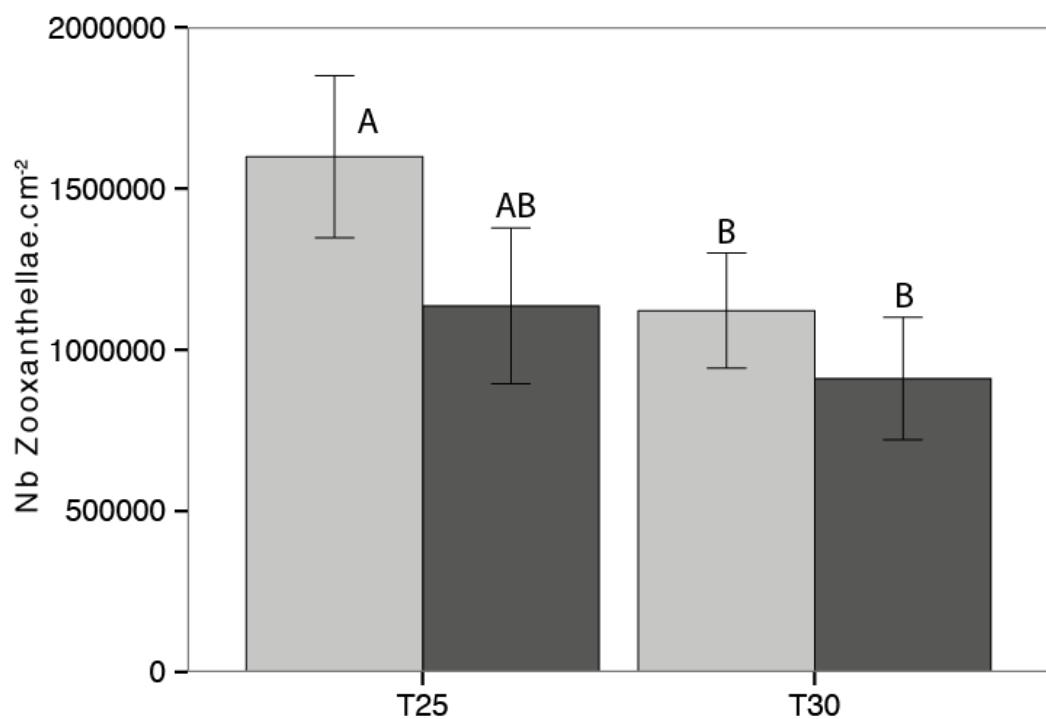

Supplementary Figure S5. Gross photosynthesis of *P.damicornis*

Rates of gross photosynthesis ($\mu\text{g C cm}^{-2} \text{ h}^{-1}$) of *P.damicornis* according to the nutrient treatment and the temperature steps (25°C and 30°C) relative to the second experiment. Control and P-enriched treatments are represented by grey and dark grey bars, respectively.

Supplementary Figure S6. Zooxanthellae density of *P.damicornis*

Density of zooxanthellae ($\text{Nb. Zooxanthellae cm}^{-2}$) of *P.damicornis* according to the different nutrient treatment and the temperature steps (25°C and 30°C), relative to the second experiment. Control and P-enriched treatments are represented by grey and dark grey bars, respectively.

Supplementary Table 7. Summary of ANOVAs testing the effect of temperature (25°C, 30°C) and species or treatment (only) on the main physiological parameters. P values are considered significant for p<0.05.

Source of variation	Df	F	p
<i>Protein content (hard corals)</i> (mg prot cm⁻²)			
Species	3	19.29	< 0.0001
Temperature	1	0.11	0.746
Species x Temperature	3	3.13	0.04
<i>Chlorophyll content</i> (µg Chl(a+c₂)*(mg prot)⁻¹)			
Species	4	45.8	< 0.0001
Temperature	1	116.2	< 0.0001
Species x Temperature	4	2.1	0.0106
<i>Zooxanthellae density</i> (Nb zooxanthellae mg prot⁻¹)			
Species	4	10.76	0.003
Temperature	1	17.51	< 0.0001

Temperature	1	26	0.001
Treatment	1	13.68	0.002
Temperature x Treatment	1	0.74	0.416

Supplementary Table S10. Summary of factorial ANOVAs testing the effect of temperature (25°C, 30°C), nutritional treatment as well as the symbiotic compartment on the rates of carbon assimilation and transfer

<i>Carbon assimilated after 24h (µg C h⁻¹cm⁻²)</i>			
Compartment	1	43.79	<0.0001
Temperature	1	11.24	0.002
Treatment	1	1.62	0.212
Compartment x Temperature	1	2.18	0.15
Compartment x Treatment	1	27.16	<0.0001
Temperature x Treatment	1	1.6	0.216
Compartment x Temperature x Treatment	1	3.29	0.08
<i>Carbon remaining within the symbiosis after 24h (%)</i>			
Compartment	1	51.18	<0.0001
Temperature	1	0.88	0.357
Treatment	1	1.12	0.3
Compartment x Temperature	1	25.43	<0.0001
Compartment x Treatment	1	1.42	0.243
Temperature x Treatment	1	0.37	0.548
Compartment x Temperature x Treatment	1	2.37	0.135
<i>Rate of photosynthates transferred after 24h (µg C h⁻¹cm⁻²)</i>			
Temperature	1	26.5	<0.0001
Treatment	1	2.88	0.109
Temperature x Treatment	1	21.58	<0.0001
<i>Rate of photosynthates transferred after 24h (%)</i>			
Temperature	1	1.604	0.225
Treatment	1	9.648	0.007
Compartment x Treatment	1	3.24	0.092
