Appendix 2: Horizontal ϵNd map averaged between 0 and 200 m for simulations EXP1, EXP2, EXP3, EXP4, EXP5 and EXP6, i.e. for $\tau=1$ month, 3 months, 6 months, 1 year, τ varying vertically, and $\tau=1$ month (max $\epsilon\text{Nd}_{\text{mar}}$) to 1 year (min $\epsilon\text{Nd}_{\text{margin}}$). Superimposed to these maps are filled circles with the same color scheme for the ϵNd data from the compilation done by Tachikawa et al., 2004 averaged between the same depths.

Appendix 3: Same as Appendix A1, but between 200 and 600 m depth.

Appendix 4: Same as Appendix A1, but between 600 and 3500 m depth.

Appendix 5: Map of Nd concentration of margins (in $\mu\text{g/g}$), of all the margins surrounding the Mediterranean Sea
