

## Supplementary Material

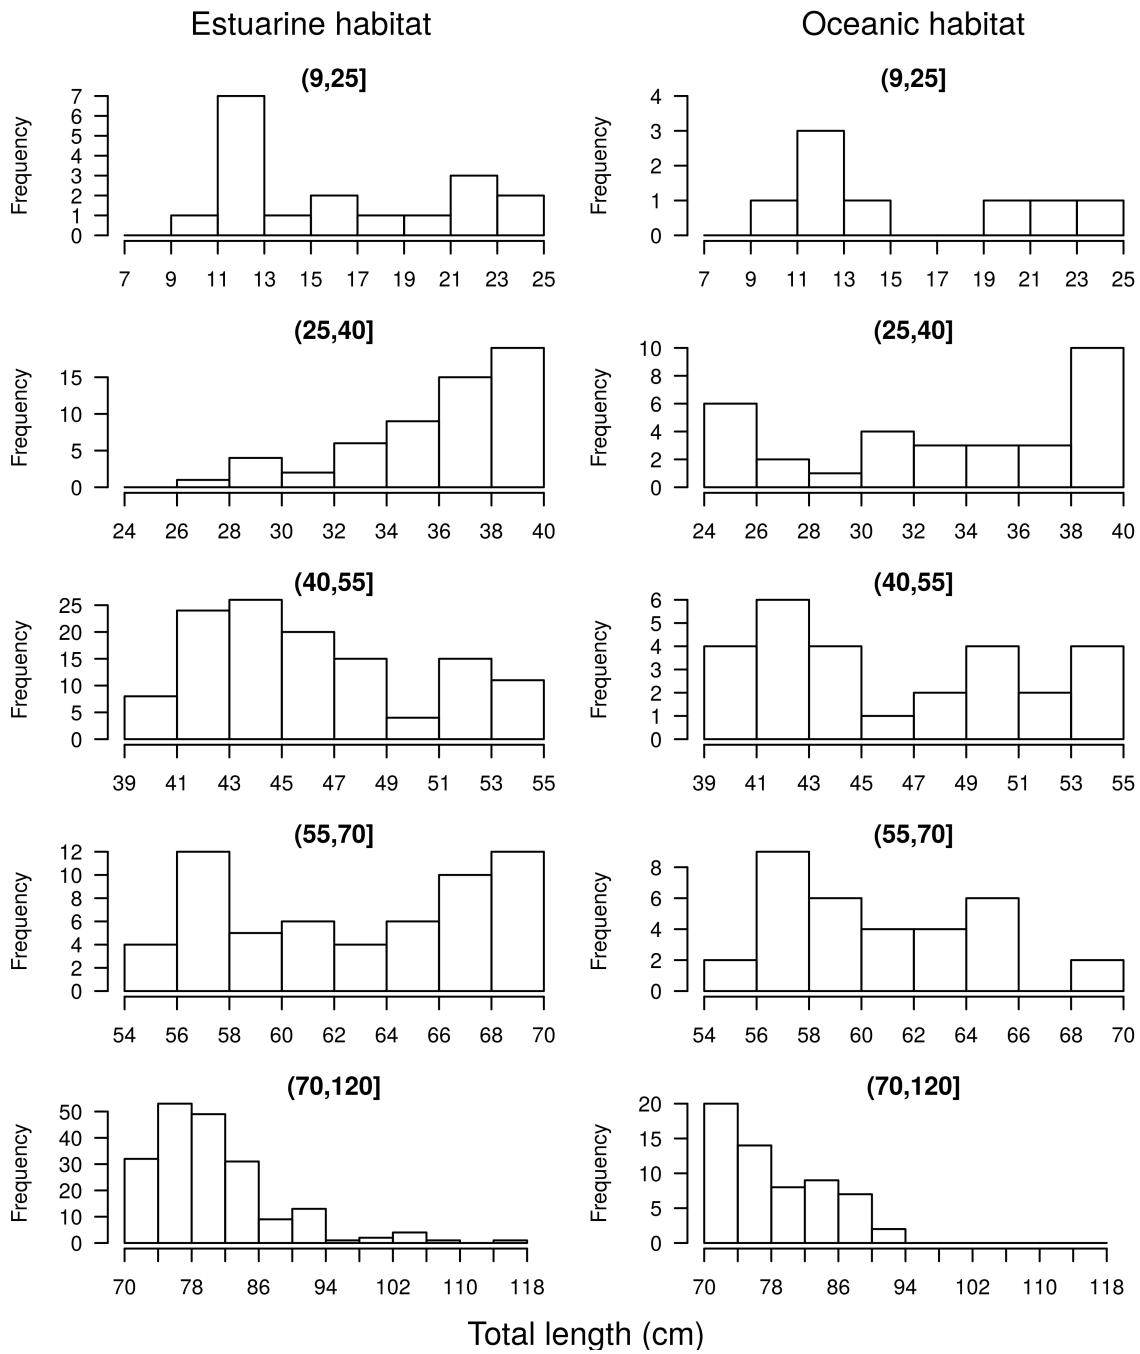

Figure SM1: Size frequency of *Merluccius australis* by size-class and habitat.

Table SM1-1: Mixing model priors ( $\hat{p}$ ) and isotopic baselines ( $\delta^{13}\text{C}$  &  $\delta^{15}\text{N}$ ) for putative preys of *Merluccius australis* in estuarine habitats, by size-class. Prey selected and priors estimated by pooling and averageing gravimetric proportions derived from stomach content analyses or SIA by several authors, (Payá, 1992; Lillo *et al.*, 1995, 2004, 2006, 2008a, 2008b, 2009, 2010, 2012, 2013, 2015; Pool *et al.*, 1997; Neira *et al.*, 2014; Klarian *et al.*, 2016). Only taxa with  $\hat{p}>0.001$  are shown.
