

1 **List of supplementary tables and figures:**

2 Supplementary table 1: Metatranscriptomic samples metadata

3

4 Supplementary table 2: Gene annotations

5

6 Supplementary table 3: Read counts for the 25140 expressed *P. australis* genes

7

8 Supplementary table 4: Broad functions and related over-represented GO categories.

9

10 Supplementary table 5: Homology and expression levels (log<sub>2</sub>FC) *in vitro* (*P. multistriata*)  
11 and *in situ* (*P. australis*) of genes belonging to clusters 1, 3, 4 and 6. In vitro results from  
12 [17].

13

14 Supplementary table 6: functions over-represented in genes belonging to cluster 1 but down-  
15 regulated in vitro.

16

17 Supplementary table 7: functions over-represented in genes belonging to cluster 3 and 4 but  
18 up-regulated in vitro.

19

20 Supplementary figure 1: Map indicating the position of the sampling site in Western Europe.

21

22 Supplementary figure 2: Temporal evolution of the mean chlorophyll fluorescence per day  
23 between 2017-02-01 and 2017-05-30. The survey period is shown in black.

24

25 Supplementary figure 3: A. Relative abundances of the Arthropod's phylum community  
26 composition and B. Maxillopoda (copepods) phylum species community composition during

27 the 2017 monitoring (the category others regroup phylum and species lower than 2% of total  
28 abundance)
